REPORT

TO

HIS EXCELLENCY JOHN CAMPBELL, EARL OF ABERDEEN, K.T.,

&c., &c., &c.,

LORD LIEUTENANT-GENERAL AND GENERAL GOVERNOR OF IRELAND.

The Annual Detailed Report upon the Vital Statistics of Ireland for the year 1909, which I have the honour of submitting for Your Excellency's consideration, is the forty-sixth report of the series, issued from this Department since the establishment of central registration in Ireland in the year 1864.

Unrevised statistics for the whole of Ireland have been published for the year 1909 in the reports for the respective quarterly periods of that year, also quarterly summaries and a yearly summary for the Births and Deaths relating to the principal urban districts of Ireland.

POPULATION.

Resulting from the detailed tabulation for the year 1909, it appears that the natural increase of population, or excess of births over deaths, was 27,786 ; and that the loss by emigration amounted to 28,676 (which number is greater than the number of Emigrants enumerated in 1908, namely, 23,295, but less than the average number—37,141—for the ten years, 1899-1908). There would, according to these figures, appear to have been a decrease of 890 persons in the population on the 31st December, 1909. With regard to immigration, there is no official record, neither does it enter into the estimate of the population to the middle of the year, which was 4,371,570.

GENERAL SUMMARY.

The table which follows shows that the Marriages registered in Ireland during the year 1909 numbered 22,650; the Births, 102,759; and the Deaths, 74,973. The marriage-rate was 5·18 per 1,000 of the estimated population, showing a decrease of 0·02, as compared with that for the year 1908, but an increase of 0·06 as compared with the average rate for the ten years, 1899-1908 ; the birth-rate was 23·5 per 1,000 of the estimated population, being 0·2 above that for the preceding year, and 0·3 above the average rate for the ten years, 1899-1908; and the death-rate (17·2 per 1,000), was 0·4 below the rate for the preceding year, and 0·6 below the average rate for the ten years, 1899-1908.

TABLE I.—Showing for each of the years 1899–1909 the estimated **Population*** ; the number of **Marriages, Births,** and **Deaths** registered, and the number of **Emigrants** enumerated, with the rates per 1,000 of the estimated Population represented thereby : and the averages for the ten years, 1899–1908.

* See page 154.

The first Diagram facing the preceding page gives the respective rates per 1,000 of the population represented by the Marriages, Births, and Deaths registered in Ireland in each of the twenty years 1890-1909, and by the number of Emigrants enumerated in each of these years.

The number of Local Registration Officers holding office directly under the Department, or who have entered into bonds with the Registrar-General for the due discharge of their duties is 2,680. The cases of vacancies or appointments which were dealt with during the year 1909, number 597.

The following table shows the number of Searches made and Certificates issued at the General Register Office (exclusive of Searches made and Certificates issued for official purposes, which, in 1909, numbered 779 of the former and 658 of the latter); also the amount received as fees for same, in each year, since the passing of the Acts for the Registration of Births and Deaths and of Roman Catholic Marriages in 1864.

TABLE II.—NUMBER OF SEARCHES made; number of CERTIFICATES issued, and Amount received as FEES for SEARCHES, &c., at the GENERAL REGISTER OFFICE, DUBLIN, during the 46 years 1864–1909.

Offences coming within the scope of the Acts administered by this Department reported during the financial year ended 31st March last, numbered 686. On careful inquiry into the circumstances, prosecutions were ordered to be instituted in 70 cases. In 43 of these the parties were convicted and punished; four were dismissed; in 19 the proceedings were abandoned, the defendants (in most instances) paying the costs of Court and complying with the law; and four cases were pending at the end of the financial year.

Amongst the offences dealt with the following are included :—Neglect to Register Births; neglect to Register Deaths; neglect to furnish Certificate of Marriage; giving false information when registering births and deaths; neglect to comply with Requisition to correct entry; neglect of medical practitioner to furnish successful Vaccination Certificate to Registrar; failure of Coroner to furnish Certificate of finding of jury.

A sum of £120 was provided in the estimates to meet legal charges. During the year the total cost of the legal service of the Department was £116 13*s.* 2*d.*, of which sum £55 9*s.* 6*d.* was paid for local professional assistance, and £53 15*s.* for mileage and allowances to the Registrars, the balance of the expenditure being mainly in respect of Court costs.

MARRIAGES.

The Marriages registered during the year numbered 22,650, representing a rate of 5·18 per 1,000 of the estimated population*; this rate is 0·02 below that for the previous year, but 0·06 above the average for the ten years, 1899-1908.

Of the 22,650 Marriages registered during last year, 16,057 were between Roman Catholics; 3,427 were celebrated according to the rites and ceremonies of the Church of Ireland; 2,296 were in Presbyterian Meeting-houses; 462 in "Registered Buildings" belonging to various religious denominations; 398 by civil contract in the Registrars' offices; 4 were according to the usages of the Society of Friends; and 6 according to the Jewish rites.

The Roman Catholic marriages represent a rate of 4·95 per 1,000 of the Roman Catholic population estimated to the middle of 1909, or 0·16 over the corresponding average rate for the preceding ten years, and the other Marriages are equivalent to a rate of 5·85 per 1,000 of all persons other than Roman Catholics in the population, this rate being 0·18 under the corresponding average rate for the ten years, 1899–1908.

Of the 3,427 Marriages celebrated according to the rites of the Church of Ireland, there were 47 by special licence, 2,837 by licence, 523 after the publication of banns, and 5 on Registrar's certificate; in 15 instances no information was afforded as to which of these methods was adopted.

---

* The rates for the total of Ireland and for the county boroughs of Dublin and Belfast and for Londonderry county and county borough are based on the estimated population in the middle of the respective years, those for the provinces for the years 1900–1909, and for the remaining counties for the year 1909 on the population according to the Census of 1901.

The number of Licences for Marriages issued by the Registrars during the year 1909 in Registered Buildings and in the Registrars' Offices was 752.

In the following summary the number of Marriage Licences issued by the Licensing Ministers of the several Presbyterian bodies is given.

Presbytery or Synod.	Number of Licensing Ministers on 31st December. 1909.	Number of Registered Meeting-houses on 31st December, 1909.	Number of Licences issued.
1. General Assembly of the Presbyterian Church in Ireland,	156	592	2,213
2. Remonstrant Synod of Ulster, ...	10	20	32
3. Presbytery of Antrim, ...	6	10	17
4. United Presbytery or Synod of Munster, ...	1	2	0
5. Presbytery of Ireland (United Free Church of Scotland), ...	5	9	16
Total, ...	178	633	2,278

In Ireland, there being no civil restrictions as to the time or place for celebrating marriages between Roman Catholics, a registration of the churches and chapels of the Roman Catholic Church is not necessary. With reference to other religious bodies, a record is kept of the places of Divine worship in which marriages may be lawfully solemnized otherwise than by special licence. On the 31st December, 1909, there were 1,490 churches and chapels of the Church of Ireland, 633 registered Presbyterian Meeting-houses, and 419 "Registered Buildings" belonging to various religious denominations. These numbers show an increase of one as regards the Church of Ireland, an increase of 2 in the number of Presbyterian Meeting-houses; and an increase of 2 in the total number of "Registered Buildings" as compared with the previous year.

The number of "Registered Buildings" belonging to the several religious bodies, as revised for the year 1909, is shown in the following list:—

Denominations.	No. of Places of Worship.	Denominations.	No. of Places of Worship.	Denominations.	No. of Places of Worship.
Methodists, ...	259	Salvation Army, ...	9	United Original Seceders,	1
Reformed Presbyterians, ...	38	Seceders, ...	8	"Undenominational," ...	1
Independents, or Congregationalists, ...	27	Non-Subscribing Unitarians,	3	Jews, ...	1
Baptists, ...	31	"The Catholic Apostolic Church,"	2	"Holiness Movement" Church	1
Christian Brethren, ...	26	Covenanters, ...	1	"Presbyterians (Unattached),"	1
Moravians, or United Brethren,	9	Welsh Presbyterians, ...	1	Total, ...	419

Of the 22,650 marriages registered, there were 6,767 recorded in the first quarter, 5,273 in the second, 5,514 in the third, and 5,096 in the fourth quarter of the year 1909.

It would appear from calculations based on the numbers given in the Abstract of Marriages, commencing on page 2, that the marriages of bachelors with spinsters constituted 89·5 per cent. of the total; that those of widowers and spinsters were 6·6 per cent.; that the marriages of bachelors and widows were 2·4 per cent.; and that those of widowers and widows formed 1·5 per cent. of the total marriages. Thus of the men married, 8·1 per cent. were widowers, and of the women, 3·9 per cent. were widows; so that, in 12 instances, in every 100 marriages, one or both of the contracting parties had been in the married state before.

TABLE V.—Showing, by QUARTERLY PERIODS, the number of MARRIAGES registered in Ireland in each of the eleven years 1899–1909, and the average number for the ten years 1899–1908, distinguishing the number of Roman Catholic Marriages registered under the 26 & 27 Vic., cap. 90, and of Protestant and other marriages under the 7 & 8 Vic., cap. 81.

As a complete record of the ages of the persons married would be valuable from many points of view, it is regrettable that this information is omitted from the records in the great majority of cases. Entering in the column for age in the register of "minor" or "full age," as the case may be, satisfies the requirements of the law in this respect, and up to the year 1908 there appears to have been in Ireland a general and increasing inclination to take advantage of this circumstance—in the year 1865, out of 30,802 marriages registered in Ireland, the ages of both parties were given in 13,910 cases, being equal to 45·2 per cent. of the total marriages in that year, while in the year 1908 such cases fell to 3,454, or only 15·2 per cent. of the total marriages recorded during 1908. In the year 1909 the number of cases in which the information regarding the age of both parties was stated, though bearing unfavourable comparison with the numbers returned in the earlier years of registration, is, however, 1357 above the number of such cases in 1908, the number for 1909 being 4,811, equivalent to 21·2 per cent. of the total number of marriages registered in Ireland in that year. Of those married in England and Wales during the year 1908, 99·2 per cent. of the husbands and 99·1 per cent. of the wives made definite statements of age at time of marriage.

Of 22,650 men married during the year, the number under age was 379, or 1·67 per cent.; and of the women married 1,550, or 6·84 per cent., were minors.

The proportion of husbands who married under age in 1909 was highest in the province of Leinster, namely, 2·24 per cent.; the highest proportion of wives (8·37 per cent.) was in the province of Ulster.

In Ireland it appears that the percentage of persons married who were under age, is very far below the corresponding percentages in England and Scotland.

An estimate of the progress of elementary education may be formed from the signatures made by the contracting parties in the marriage registers or certificates. In the year 1909, there were 21,178, or 93·5 per cent., of the husbands, and 21,516, or 95·0 per cent., of the wives, who wrote their names, and the remainder signed by marks, as against 19,368, or 86·8 per cent., of the husbands, and 19,758, or 88·6 per cent., of the wives, in the year 1899; 16,951, or 78·8 per cent., of the husbands, and 16,783, or 78·0 per cent., of the wives, in the year 1889; and 16,735, or 72·0 per cent., of the husbands, and 15,609, or 67·1 per cent., of the wives, in the year 1879.

The percentages for 1909 show a considerable improvement when compared with the corresponding results in the first of the preceding ten years, the percentage of men married in 1899 who wrote their names being 86·8 and of women 88·6; and they exhibit a great advance when compared with the percentage for the year 1864, in which year but 61 in every 100 men, and 50 in every 100 women married, wrote their names.

The percentages among men during the year 1909 for the provinces range from 90 in Connaught to 95 in Munster and Leinster; and, among women, from 94 in Ulster to 96 in Munster and Leinster.

Both of the persons married signed the register by "mark" in 383 cases, and the register was thus signed by either the husband or the wife in 1,840 cases, so that in 2,223 cases, or 9·8 per cent. of the total number of marriages, one or both of the parties attested the signature by "mark"; and in 20,427 marriages or 90·2 per cent., *both* parties wrote their names.

The following table gives for Ireland, and for each of the four provinces, the proportion per cent. of persons married in each of the eleven years 1899-1909, who wrote their names in the registers or certificates; of minors; of widowers; and of widows:—

TABLE VI.—Showing, as regards the **Marriages** in Ireland, and in each of the Four Provinces, during the years 1899–1909, the proportion per cent. of Persons who **signed their names,** of Persons **not of Full Age,** and of **Re-marriages.**

	1908,	89·3	93·8	0·52	3·08	6·63	2·60
	1909,	90·3	94·6	0·65	3·13	7·42	2·85

The highest provincial marriage rate in 1909 was recorded in each of the provinces of Leinster and Ulster, the rate being 5·5 per 1,000 of the population, according to the Census of 1901. The rate for Munster was 4·8 per 1,000, and that for Connaught 3·8 per 1,000.

The highest marriage rate for county, or county borough areas, was 7·2 per 1,000 of the population for the county borough of Dublin, and the lowest was 3·4 per 1,000 for the county of Mayo. Between these extremes the highest rates were 7·1 for the county borough of Belfast, 6·4 for the county of Dublin, 5·4 for Londonderry county and county borough, 5·3 for Limerick county and county borough, 5·1 each for the county of Down, Cork county and county borough, and Armagh county; and the lowest were 3·5 for the county of Clare, 3·7 for the county of Galway, 3·8 each for Leitrim and Queen's county, and 3·9 each for Fermanagh and Westmeath counties.

BIRTHS.

There were 102,759 births registered during the year 1909, including 52,726 boys, and 50,033 girls, or 105·4 of the former to every 100 of the latter—the ratio to the estimated population being 1 in 42·5, or 23·5 per 1,000, which is 0·3 above the average rate per 1,000 for the ten years, 1899-1908.

Of the 102,759 children, whose births were registered in Ireland during the year 1909, 99,997, or 97·3 per cent., were legitimate, and 2,762, or 2·7 per cent. were illegitimate, the latter being 0·1 above the corresponding average percentage for the preceding ten years. These results bear favourable comparison with the returns for most other countries.

During the year, the number of male children born in wedlock was 51,322, and of female, 48,675, or 105·4 of the former to every 100 of the latter; of the illegitimate children, 1,404 were males, and 1,358 females, being 103·4 boys to 100 girls.

Of the children born in Ulster, 3·6 per cent. were illegitimate; in Leinster, the percentage was 2·6; in Munster, 2·5; and in Connaught, 0·7, as shown in Table VII.

TABLE VII.—The Percentage of **Legitimate** and of **Illegitimate** Births registered in Ireland during the years 1905–1909 by Provinces.

Provinces.	Proportion per cent. of Legitimate Births					Proportion per cent. of Illegitimate Births.

MUNSTER, ...	97·7	97·8	97·9	97·9	97·5	2·3	2·2	2·1	2·1	2·5
ULSTER, ...	96·5	96·5	96·7	96·6	96·4	3·5	3·5	3·3	3·4	3·6
CONNAUGHT, ...	99·3	99·3	99·4	99·3	99·3	0·7	0·7	0·6	0·7	0·7

The rates represented by the total births registered during the year 1909 in the provinces were—Leinster, 23·8 per 1,000 of the population in 1901; Munster, 22·4; Ulster, 23·8; and Connaught, 20·8.

The highest birth-rates for the county or county borough areas were—31·7 for Dublin county borough; 28·3 for Belfast county borough; 24·7 for Limerick county and county borough; 24·4 for county Kildare; 23·9 for county Kerry; and 23·7 for Antrim county. The lowest rates were—18·4 for Cavan county; 18·5 for Roscommon county; 18·9 for King's county; 19·0 for Longford county; and 19·0 for Tipperary, North Riding.

Of the total births, 51·3 per cent. were registered in the first six months of the year (181 days), and 48·7 per cent. in the second six months of the year (184 days).

In the first quarter of the year the total number of births registered was 25,774; in the second, 26,930; in the third, 25,361; and in the fourth, 24,694.

MULTIPLE BIRTHS IN IRELAND IN EACH OF THE YEARS 1908 AND 1909.

Year.	Total Births.	Twin Births.	Triplets.	Quadruplets.	Twin Births—per cent. of Total Births.	Twin Births—per cent. of Single Births.	Twin Births—per cent. of Total Mothers.
1908	102,039	1,198	10	–	1·174	1·203	1·188
1909	102,759	1,201	17	–	1·169	1·197	1·183

The investigation regarding multiple births in Ireland which was undertaken for the first time for the year 1908, was continued for the year under review, with the results which appear in the above table. In 1909, the twin births numbered 1,201 and the triplets 17, as against 1,198 twins and 10 triplets in 1908. The percentage of twin children to total mothers in 1908 was 1·188, and in 1909 it was 1·183.

DEATHS.

The number of deaths registered in Ireland during the year 1909 was 74,973, equivalent to 1 in 58·3, or 17·2 per 1,000 of the population estimated to the middle of the year. The deaths of males amounted to 37,108, and those of females to 37,865, the rate for males being 17·1 per 1,000, and for females 17·2 per 1,000.

The death-rate (17·2) is 0·4 under that for the year 1908, and 0·6 under the average rate for the ten years, 1899–1908.

Valuable notes, appended to their Quarterly Returns, on the sanitary condition of their respective districts have been furnished to me by many of the Registrars. These notes were published in the Quarterly Returns issued from this Department, and it is most desirable that they should receive the careful attention of the various Local Authorities entrusted with the administration of the Public Health Acts.

The recorded death-rates for the four provinces are as follows:—Connaught, 14·2; Munster, 15·5; Ulster, 17·5; and Leinster, 18·6 per 1,000 of the population, according to the Census of 1901.

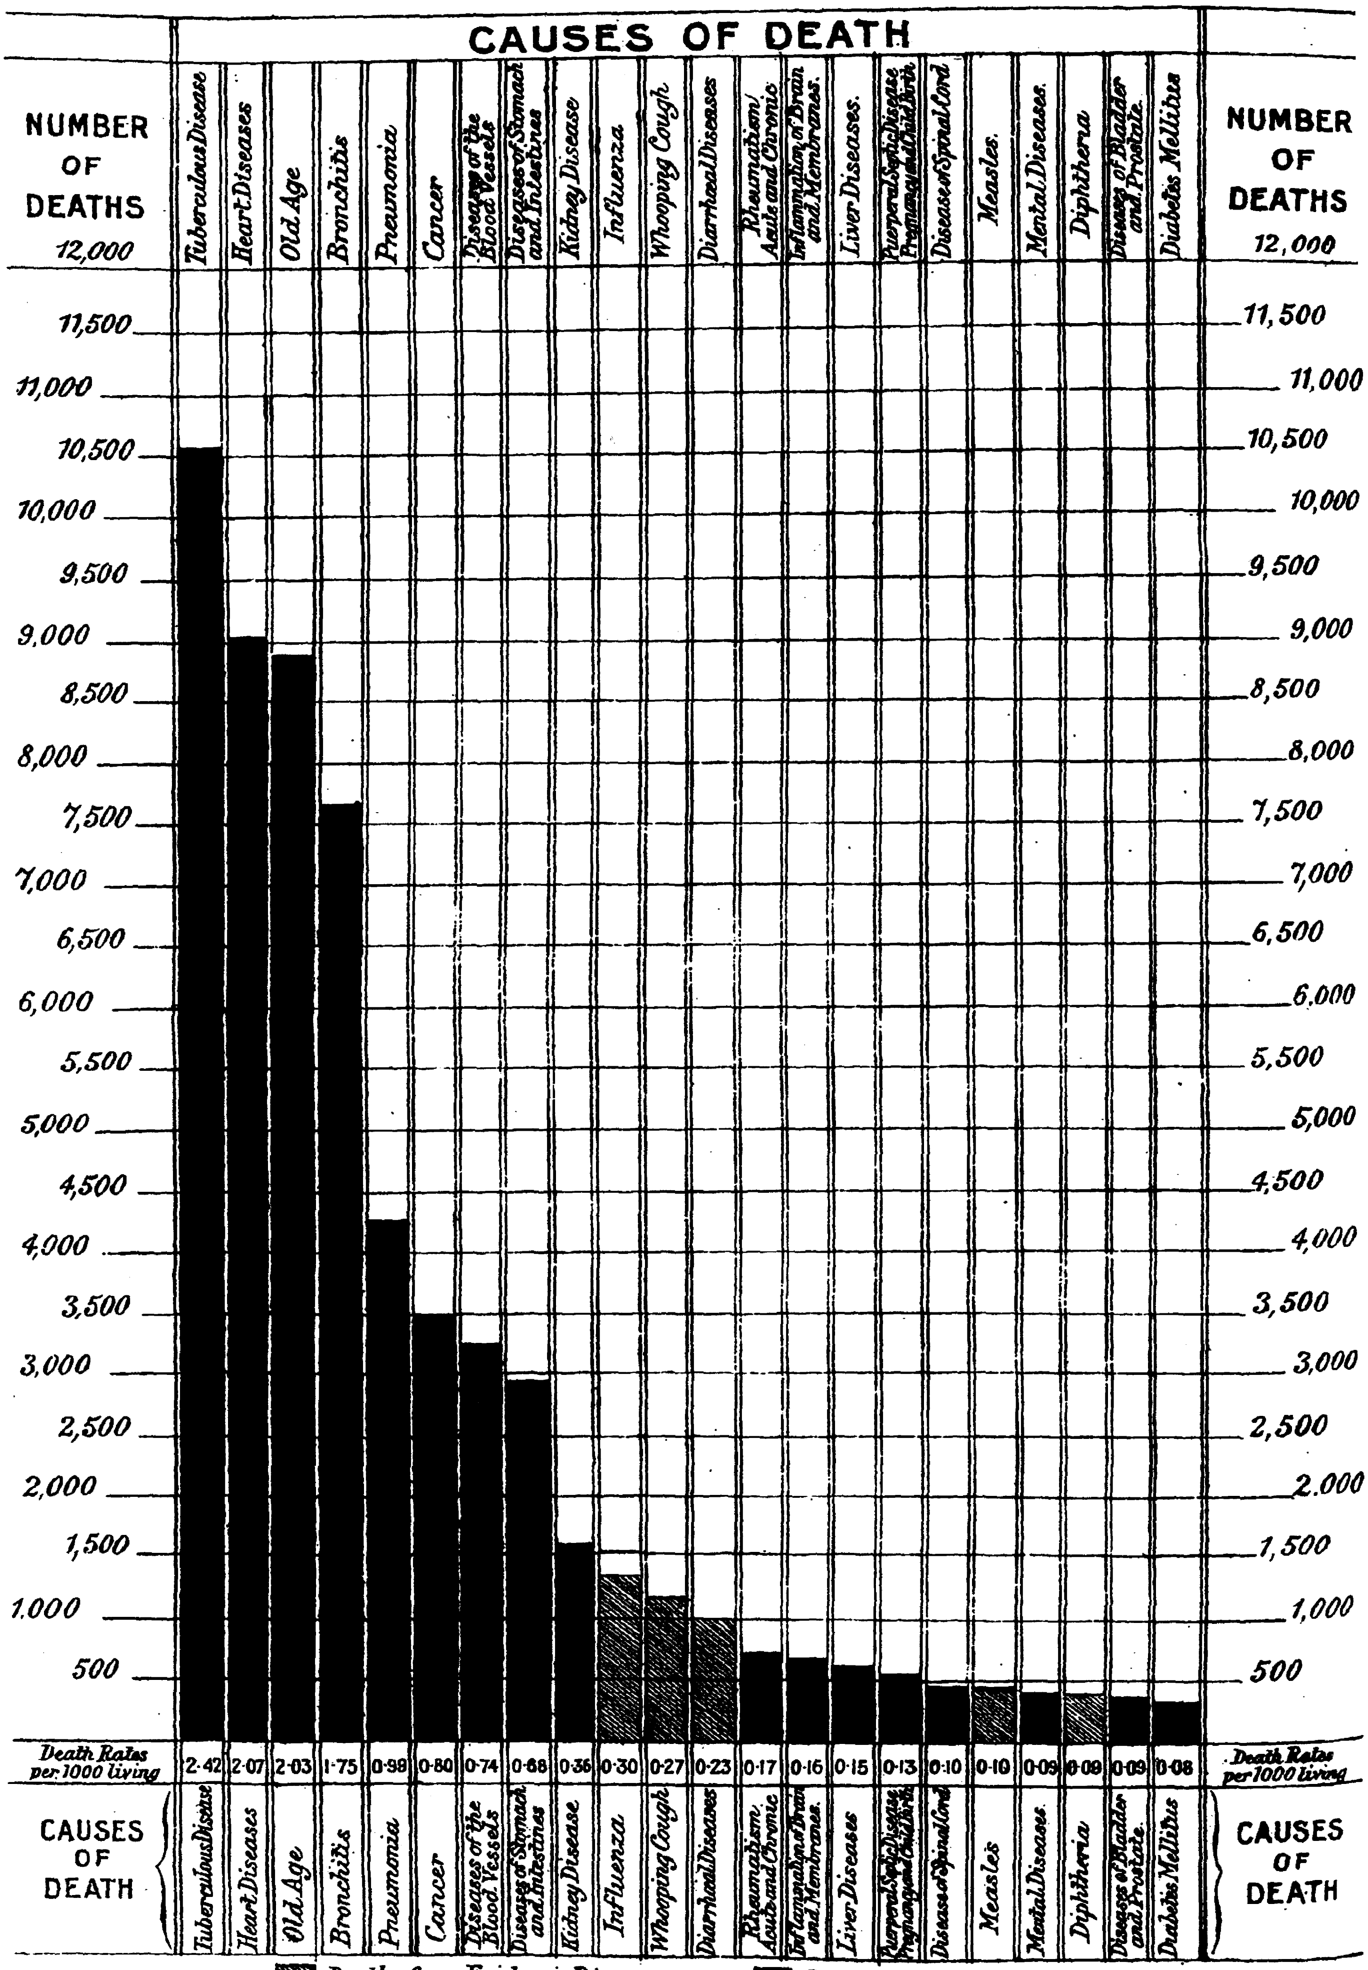
The counties having the lowest mortality rates per 1,000 of the population were:—County Kerry, 13·1; county Clare, 13·5; county Leitrim, 13·8; county Mayo, 13·9; county Galway, 14·1; Tipperary, N.R., 14·5; and King's county, 14·5.

The highest rates are as follows:—Dublin county borough, 23·4; Armagh, 18·9; Belfast county borough, 18·2; Waterford county and county borough, 18·0; Wexford county, 17·5; and Monaghan county, 17·5.

The number of deaths registered in the first half of the year generally exceeds the number registered in the second half, the deaths registered in the six months of 1909, January to June inclusive, constituting 55·7 per cent. of the total for the year, and those in the remaining six months 44·3 per cent.

The deaths registered in each quarter are represented by the following annual rates:—First quarter, 20·1 per 1,000 of the population; second, 18·1; third, 13·9; and fourth, 16·5. The rate for the first quarter is 1·1 below, the second 0·5 below, the third 0·8 below, and the fourth equal to the average rate for the corresponding quarter in the ten years, 1899-1908.

DIAGRAM No. 2.—Mortality from Twenty-Two of the Principal Causes of Death in Ireland, in the year 1909.



(To face page XIII)

Of the* 74,973 *deaths registered during the year, as will be observed from the table on pp.* 144–153, 3,371 *took place in Infirmaries and General and Special Hospitals;* 1,536 *in Public Lunatic Asylums;* 10,353 *in Workhouses and Workhouse Hospitals; and* 59,713 *were of persons who died "At their Own Homes, &c."

The number of deaths, in "Infirmaries and General and Special Hospitals," is equivalent to 4·5 per cent. of the total deaths registered in Ireland, the percentages for the four provinces varying from 0·6 in Connaught to 9·5 in Leinster. Of the deaths registered, 13·8 per cent. occurred in Workhouses or Workhouse Hospitals, the respective percentages for the provinces being—Leinster, 16·3; Munster, 19·1; Ulster, 10·1; and Connaught, 9·5.

TABLE VIII.—Showing by QUARTERLY PERIODS, the number of BIRTHS and DEATHS registered in Ireland in each of the eleven years, 1899–1909, and the average number for the ten years, 1899–1908.

CAUSES OF DEATH.

In the pages which follow, the causes of death, which were analysed and classified, by a process of detailed tabulation, and which takes cognisance of the sex, the age, the cause of death, and the locality in which the death occurs, are reviewed.

In the course of the work enquiries were made from Medical Practitioners asking for further particulars in doubtful causes of death. These enquiries are almost invariably replied to with great courtesy and promptness, and are the means of enabling me to present the mortality statistics of Ireland from the various causes in a more satisfactory manner.

The classification of causes of death is uniform with that of previous Annual Reports from and including the year 1902, and is based upon the Official Nomenclature of Diseases.

To enable your Excellency to readily inform yourself of the principal numerical facts arising from the compilation of the details of the mortality of the population of Ireland, I have, as in the Report for 1908, prepared a short summary statement, which compares the mortality from the principal causes of death in the year under notice, with the corresponding figures for the year 1908, and with the averages for the 10 years, 1899–1908, as follows:—

STATEMENT showing the number of deaths from the undermentioned causes registered in Ireland during each of the years 1908 and 1909, with the annual average number for the ten years, 1899-1908.

CAUSES.	NUMBER OF DEATHS REGISTERED.			CAUSES.	NUMBER OF DEATHS REGISTERED.		
	Years.		Average 10 years 1899–1908.		Years.		Average 10 years, 1899–1908.

Puerperal Septic Diseases, ..	222	189	217	Violent Deaths, ...	1,858	1,916	1,896

From the above it will be observed, among other facts, that, in comparison with 1908, the deaths from all forms of tuberculous disease show a decrease of 699, this following a decrease in the year 1908 of 386, when compared with the year 1907. The reduction here referred to, which will be more fully dealt with in the paragraph on mortality from tuberculous disease, must be a source of gratification, showing, as it does, that the work which has been so nobly carried on, under the auspices of your Excellency and the Countess of Aberdeen, has borne good fruit.

It may also be seen that among the so-called principal epidemic diseases* the mortality in the year 1909 is increased for scarlet fever, whooping cough, and, in a small degree, for diphtheria, but that for measles, typhus, enteric fever, and diarrhœal diseases, there are decreases in mortality; there is a decrease in the mortality from influenza of 495 deaths as compared with the year 1908. The figures for malignant diseases show an increase from 3,314 deaths in 1908, to 3,502 deaths in 1909.

In addition to the abstracts and the tables which appear in this Report, I have introduced 6 diagrams, in order to simplify the examination of the more important matters connected with the Vital Statistics of Ireland; these will be found in their approved places, and are as follows:—

DIAGRAM No. 1.—Showing the respective rates per 1,000 of the population represented by the Marriages, Births, and Deaths registered in Ireland in each of the twenty years, 1890–1909, and by the number of Emigrants enumerated in the same years, ... *Facing* Page v.

---

* Small-pox, measles, scarlet fever, typhus, whooping-cough, diphtheria, *pyrexia* (origin uncertain), enteric fever, and diarrhœal diseases.

GENERAL DISEASES.

Small-pox.—The last record of mortality from small-pox in Ireland was in the year 1907, when one death was registered.

The following table gives the number of deaths from small-pox, and the number of primary vaccinations reported by the Registrars in their quarterly returns for each of the years 1882–1909.

Year.	Number of Deaths registered from Small-pox.	Number of successful Primary Vaccinations in each year.	Year.	Number of Deaths registered from Small-pox.	Number of successful Primary Vaccinations in each year.	Year.	Number of Deaths registered from Small-pox.	Number of successful Primary Vaccinations in each year.
1882	129	107,613	1892	–	89,527	1901	2	88,520
1883	16	106,961	1893	1	88,695	1902	1	94,303
1884	1	105,021	1894	72	107,204	1903	40	95,955
1885	4	102,680	1895	146	92,227	1904	16	91,976
1886	2	97,137	1896	4	88,817	1905	5	89,394
1887	14	96,866	1897	3	89,732	1906	–	90,171
1888	3	93,520	1898	–	87,169	1907	1	89,207
1889	–	92,621	1899	1	84,937	1908	–	88,576
1890	–	93,368	1900	1	91,150	1909	–	86,799
1891	7	92,267						

It appears from this that the largest number of deaths in any year of the above period occurred in 1895, and that in each of the years, 1889, 1890, 1892, 1898, 1906, 1908, and the year under notice, not one death from small-pox was registered in Ireland.

From the year 1904 a special supplement on the vaccination statistics of Ireland has been prepared in this office; the leading information for this year and succeeding 4 years, is reproduced in the following table which gives particulars regarding the Vaccination of the Children whose Births were registered in Ireland during each of the years 1904-1908, with their percentage to the total Births registered during each year :—

Years.	Successful Vaccinations (Form A. First Schedule).		Vaccinations Postponed (Form B, first Schedule).		Insusceptible of Vaccine Disease (Schedule D). On the ground of constitutional insusceptibility of the Vaccine Disease.		Insusceptible of Vaccine Disease (Schedule D). In respect of the children having already had Small-pox.		Died before Vaccination.		Unaccounted for, owing to removal from District or otherwise.		Defaulters who have not been granted an extension of time under Form B, First Schedule.		Total Births Registered.	
	Number.	Per-centage.	Number.	Per-centage.	Number.	Per-centage.	Number.	Per-centage.	Number.	Per-centage.	Number.	Per-centage.	Number.	Per-centage.	Number.	Per-centage.
1904	84,068	81·0	2,184	2·1	118	0·1	2	0·0	7,105	6·9	3,774	3·6	6,560	6·3	103,811	100·0
1905	84,326	82·0	2,505	2·4	90	0·1	.	.	6,624	6·5	3,625	3·5	5,662	5·5	102,832	100·0
1906	83,223	80·4	2,555	2·5	121	0·1	.	.	6,955	6·7	4,229	4·1	6,453	6·2	103,536	100·0
1907	81,841	80·4	2,360	2·3	88	0·1	.	.	6,650	6·6	3,567	3·5	7,230	7·1	101,742	100·0
1908	80,504	78·9	2,601	2·5	96	0·1	.	.	6,808	6·7	3,217	3·2	8,813	8·6	102,039	100·0

The foregoing summary shows that the successful vaccinations, which were 81 per cent. of the births registered in 1904, rose to 82 per cent. in 1905, declined to 80·4 per cent. in each of the years, 1906 and 1907, and further declined to 78·9 per cent. in the year 1908.

In the event of mortality from small-pox coming under the notice of a medical practitioner, he is requested to specify the condition of the patient in relation to vaccination under one or other of the following heads of information :—

If there is no evidence of vaccination; if vaccinated in infancy only—number of scars; if vaccination is performed only after infection by small-pox; if stated to be vaccinated, but no scars visible; and if re-vaccinated, the date of re-vaccination, if possible.

It may be seen in the abstracts, commencing on page 120, that no death was recorded in Ireland as resulting from the effects of vaccination or from cow-pox during the year 1909.

The following TABLE (IX.) shows (1) the Number of Deaths from All Causes, and from with the Average Annual Number for the ten years, 1899-1908; and (2) the respective

NOTE.—In this Table the figures for the years 1902–9

---

* The rates for the years 1900–1909 for the Provinces are based on the Census of 1901. See Note (*) on page vii.

Chicken-pox.—There were 6 deaths attributed to chicken-pox, 4 being deaths of males and 2 of females; 5 of the 6 deaths were those of children under 5 years of age.

Measles.—A reference to Table IX., page xvi., which gives a summary of the principal causes of death in the whole of Ireland for the year under notice and the preceding decennial period, will show that the number of deaths from measles registered in the year 1909 was 443—a number which corresponds to a mortality rate of 0·10 per 1,000 of the population of Ireland estimated to the middle of the year. This rate is under the average for the preceding decennial period (0·17 per 1,000), and the rate in the year preceding (0·20 per 1,000). Of the deaths, 227 were of males and 216 were of females; of the males, 54 were deaths of infants under one year of age, and 137 were deaths of children between the ages of one year and five years; and of the 216 deaths of females, 34 were of infants under one year of age, and 126 were of children between the ages of one year and five years. Turning to the abstracts, commencing with page 146, which show by unions in alphabetical order, the incidence of mortality from measles, it may be seen that 16 deaths were registered in Ballymena; 12 in Cahirsiveen; 20 in Castlereagh; 12 in Cavan; 10 in Cork; 44 in North Dublin union; 74 in South Dublin union; 12 in Granard; 12 in Mohill; 18 in Skibbereen; 11 in Sligo; and 12 in Tuam union. There were 78 unions in which no death from measles was registered in the year 1909.

The following table shows the number of deaths from measles registered in Ireland during each of the forty-six years, 1864–1909:—

TABLE showing the number of Deaths from Measles registered in Ireland during each of the forty-six years 1864-1909.

YEAR.	No. of Deaths from Measles.	YEAR.	No. of Deaths from Measles.	YEAR.	No. of Deaths from Measles.
1864, ...	630	1880, ...	1,025	1895, ...	301
1865, ...	1,036	1881, ...	402	1896, ...	516
1866, ...	851	1882, ...	1,518	1897, ...	1,070
1867, ...	1,292	1883, ...	801	1898, ...	316
1868, ...	1,251	1884, ...	559	1899, ...	1,532
1869, ...	948	1885, ...	1,323	1900, ...	640
1870, ...	954	1886, ...	284	1901, ...	459
1871, ...	547	1887, ...	1,307	1902, ...	1,076
1872, ...	1,380	1888, ...	1,935	1903, ...	686
1873, ...	1,303	1889, ...	574	1904, ...	522
1874, ...	667	1890, ...	726	1905, ...	809
1875, ...	898	1891, ...	240	1906, ...	388
1876, ...	664	1892, ...	1,183	1907, ...	584
1877, ...	1,562	1893, ...	1,082	1908, ...	858
1878, ...	2,212	1894, ...	1,215	1909, ...	443
1879, ...	860				

From the above table it will be observed that the highest number of deaths from measles was recorded in the year 1878, when there were 2,212 deaths, and that the lowest number was in 1891, in which year 240 deaths were registered.

Scarlet Fever.—There was an increase in the mortality from scarlet fever from 72 deaths in the year 1908—the lowest figure recorded in Ireland—to 129 in the year under notice; the latter figure is, however, below the average (175) for the preceding decennial period. The decrease in the mortality from scarlet fever in the later as compared with the earlier years of registration is a remarkable feature of the statistics of Ireland, as may be seen in the table published in the Annual Detailed Report for the year 1908, which gives the number of deaths from scarlet fever registered in Ireland for each of the years, 1864-1908. Of the total deaths, 70 were of males and 59 were of females. The total deaths include 2 of infants under one year of age, 67 between the ages of 1 year and 5 years, and 30 between the ages of 5 years and 10 years. Of the deaths, 26 were registered in Cork union, 20 in South Dublin union, and 10 in Limerick union.

Typhus.—As with scarlet fever, a large reduction in mortality from typhus in Ireland is shown when comparison is made with the earlier years for which statistical records are obtainable. The figures for these years are published in the Registrar-General's Annual Report for 1907, in a tabular statement showing the number for each year from 1869, when 891 deaths from typhus were recorded. In the year 1880, there were 934 deaths, being the highest annual number; in 1901, such deaths had fallen to 92; in 1904, to 53; and in the period under notice, the lowest number on record (43) has been reached. Of the 43 deaths, 21 were of males (4 of these being persons under 20 years of age), and 22 were of females, one of these being under 20 years of age, and 21 were aged 20 years or upwards. It may be seen in the abstracts, commencing on page 146, that one or more deaths from typhus were registered in the following unions, placed in alphabetical order:—In Ballina, 3 deaths; in Ballymena, one death; in Belmullet, 3 deaths; in each of Carrickmacross, Castlebar, Castleblaney, and Cavan, one death; in Cork, 6 deaths; in Dingle, 2 deaths; in Dublin North, one death; in Dublin South, 2 deaths; in each of Dundalk, Dunfanaghy, Ennis, and Ennistimon, one death; in each of Galway and Killala, 2 deaths; in each of Killarney, Kilrush, Longford, New Ross, Oughterard, Shillelagh, and Sligo, one death; in Swineford, 2 deaths; in Tobercurry, one death; and in Waterford, 3 deaths.

Whooping-cough.—The steady and substantial decline in the mortality statistics from the epidemic diseases subject to strict compulsory notification, such as scarlet fever, typhus, and enteric fever, is not seen in the figures representing the mortality from measles and whooping-cough, the latter disease causing 1,175 deaths (principally those of young children) in the year under notice. An irregularity of the annual mortality rate is a characteristic of this disease; this appears to be inevitable, as there is practically no check placed on the spread of the disease, and the resulting mortality in each year depends on the existing circumstances which may obtain during an unchecked epidemic.

It appears that for the year 1909, out of a total mortality of 3,514 from the so-called principal epidemic diseases, there were 2,620 caused in the aggregate by measles, whooping-cough, and diarrhœal diseases, while there were only 872 deaths in the aggregate caused by scarlet fever, typhus, diphtheria, and enteric fever, these latter four diseases being subject to compulsory notification wherever the Act is adopted.

In the following table the number of deaths from whooping-cough registered in Ireland during each of the forty-six years, 1864–1909, is given:—

TABLE showing the number of Deaths from Whooping-cough registered in Ireland during each of the forty-six years 1864-1909.

Year.	No. of Deaths from Whooping-cough.	Year.	No. of Deaths from Whooping-cough.	Year.	No. of Deaths from Whooping-cough.
1864, ...	1,735	1880, ...	2,371	1895, ...	1,047
1865, ...	1,506	1881, ...	1,358	1896, ...	1,040
1866, ...	1,736	1882.	832	1897, ...	1,851
1867, ...	2,144	1883, ...	2,041	1898, ...	1,588
1868, ...	2,380	1884, ...	1,834	1899, ...	988
1869, ...	1,439	1885.	1,436	1900, ...	689
1870.	1,319	1886, ...	1,219	1901.	1,123
1871, ...	1,388	1887, ...	1,386	1902, ...	1,002
1872, ...	1,926	1888, ...	1,259	1903, ...	1,062
1873, ...	1,986	1889, ...	1,481	1904, ...	1,551
1874, ...	2,029	1890.	1,493	1905.	581
1875, ...	1,376	1891.	1,280	1906.	929
1876, ...	1,548	1892, ...	1,154	1907, ...	809
1877, ...	1,689	1893, ...	1,169	1908, ...	945
1878, ...	2,183	1894, ...	1,242	1909, ...	1,175
1879, ...	1,938				

It would appear from the above statement that in the year 1868 the highest number of deaths from whooping-cough was recorded, namely, 2,380, and the lowest number was in the year 1905, the number of deaths registered being 581. Between these numbers, the highest were 2,371, 2,183 and 2,144 in 1880, 1878 and 1867, respectively, and the lowest were, 689 in the year 1900, 809 in 1907, and 832 in 1882.

The total deaths from whooping-cough correspond to an annual rate of 0·269 per 1,000 of the estimated population of Ireland for the year 1909, being over the rate for the year 1908, which was 0·216 per 1,000, and also over the average rate for the preceding decade 0·219 per 1,000. There were 514 deaths of males, 513 being under 15 years of age, including 269 deaths of infants under one year of age, 219 deaths between the ages of one year and 5 years, 23 between the ages of 5 years and 10 years, and 2 between 10 years and 15 years. The deaths of females numbered 661; of this figure 274 were of infants under one year of age, 333 were between the ages of one year and 5 years, 49 between the ages of 5 and 10 years, and 4 between the ages of 10 and 15 years.

From an examination of the abstracts, commencing on page 146, it appears that in 41 out of the unions of Ireland, 158 in number, there was no registered mortality from whooping-cough. In the remaining unions the deaths registered ranged from one death in each of several unions to 236 deaths in Belfast union. Among other unions in which several deaths occurred, there were in Armagh 17 deaths; in Athy 11 deaths; in Bailieborough 17 deaths; in Ballina 11 deaths; in Banbridge 20 deaths; in Belmullet 14 deaths; in Callan 12 deaths; in Cork 91 deaths; in North Dublin union 66; in South Dublin union 93; in Dundalk 12; in Dungarvan 16; in Kilmallock 12; in Larne 13; in Limerick 26; in Magherafelt 26; in Mitchelstown 13; in Mullingar 15; in New Ross 14; in Newry 16; in Omagh 22; in Oughterard 14; in Rathdown 15; in Swineford 21; in Tuam 11; in Tullamore 11; and in Waterford 23.

Diphtheria.—In the Irish statistics, the deaths under this heading include those from diphtheria and those returned as from *membranous croup.* In all cases where croup alone was certified as a cause of death further information was requested regarding the nature of the disease; as the term "*croup*" is used in three significations, namely, as a synonym for diphtheria, for laryngismus stridulus, and for catarrhal laryngitis, it is necessary, for the purposes of correct classification of the causes of death, that the use of the term should be altogether discontinued in certificates of death.

The total number of deaths classified to diphtheria in the year 1909, as disclosed by the certified copies of the registers of deaths and by the special inquiry referred to, was 395; this figure is 23 more than the number registered in the preceding year, and 41 over the annual average for the 10 years, 1899–1908. Only in one year of this decade did the number of deaths exceed 395, namely, in the year 1902, when 421 deaths from diphtheria were registered. Of the total (395) there were of males 203 deaths and of females 192 deaths. Of the males 103 were deaths of children between one and 5 years of age, including 44 aged one and under 2 years; and of the deaths of females 83 were those of children aged one and under 5 years, 29 of the latter being those of children at the age period, one and under 2 years. Of the total deaths, 16 were registered in Belfast union, 23 in Cork, 11 in North Dublin union, 49 in South Dublin union, 11 in Galway, and 10 in Londonderry union.

Enteric Fever.—With the exception of the years 1901 and 1905 there has been a continuous decrease in the mortality from enteric fever from the year 1899 to the year 1909, now under notice; the total deaths in 1899 amounted to 890, and in 1909 they had fallen to 305, the annual average for the 10 years, 1898-1908, being 564 deaths. The sexes and ages, also the localities in which deaths from enteric fever were registered will be found in the abstracts. It appears that, of the total deaths, 181 were of males and 124 were of females; of the deceased males, not one death was recorded under the age of one year; there were 3 deaths between the ages of one year and 5 years, and 39 deaths between the ages of 5 years and 20 years; between the ages of 20 years and 45 years 107 deaths were registered, of which 29 occurred at the age-period, 20 and under 25 years, and 44 at the age-period, 25 and under 35 years. Of the deceased females, as in the case with the males, there was no death under one year registered; there were 6 deaths between the ages of one year and 5 years, 31 between the ages of 5 years and 20 years, and 63 deaths between the ages of 20 years and 45 years, of which number 25 were deaths of females between 20 and 25 years of age, and 18 between the ages of 25 and 35 years. Regarding the localities in which the deaths from enteric fever took place, in each of the unions of Ireland, information will be found in the abstract commencing on page 146. Among these it will be seen that 13 deaths from enteric fever were registered in Belfast, also 13 (8 of these appertaining to Belfast county borough) in Lisburn union; there were 18 deaths in Cork union, 24 in North Dublin union, and 44 in South Dublin union.

In the course of the yearly classification 22 deaths were assigned to the heading pyrexia (origin uncertain).

TABLE XI.—Showing for the year 1909 the Deaths from the several forms of **Fever** at each Age-Period, with the proportion to the number of the living at each Age represented thereby.

AGE-PERIODS.	DEATHS FROM FEVER.

* Formerly described as "Simple Continued Fever."

Diarrhœal Diseases.—In the aggregate the deaths from diarrhœal diseases in the year 1909 numbered 1,002, the number registered in the year 1908 being 1,199, and the annual average for the 10 years, 1899-1908, numbering 1,457 deaths; these three numbers correspond to the respective rates of 0·23, 0·27, and 0·33 per 1,000 of the estimated population.

The total deaths from diarrhœal diseases include those deaths which were stated to be due to—epidemic enteritis (or its synonyms), *diarrhœa*, cholera-infantum, cholera nostras, dysentery, and intestinal catarrh—but does not include deaths from enteritis, or from *gastro-enteritis*, from one or other of which 708 deaths were stated to have been caused in the course of the year.

With regard to the ages of those who died from diarrhœal diseases it appears that of the total deaths (1,002), there were 682 deaths of children under 2 years of age, 387 of males, and 295 of females; it may also be gathered from the abstracts that of the 708 deaths from enteritis and *gastro-enteritis* there were 474 deaths of children under 2 years of age, 269 being of males and 205 of females.

An examination of the figures presented in the abstracts will show that of the total deaths (1,002) attributed to diarrhœal diseases in the whole of Ireland during the year 1909, there were 590 registered in the unions which contain the six county boroughs of Ireland, or about 59 per cent. of the deaths took place in an aggregate population, representing only 26 per cent. of the total population of Ireland.

The following table, which also appears in the Report on the Vital Statistics of Ireland for the September quarter of 1909, shows the relation between the deaths from diarrhœal diseases, the mean air temperature, the mean earth temperature at 4 feet, the number of hours of bright sunshine, and the rainfall in inches for the 6 years, 1904-1909.

—	September Quarter of Year.	No. of Deaths from Diarrhœal Diseases.	Mean Air Temperature.	Mean Earth Temperature at 4 feet.	Bright Sunshine. No. of hours observed.	Rainfall in inches.

* See note (*) on page vii.

Cerebro Spinal Fever:—There was a marked decline in the mortality from cerebro-spinal fever, *i.e.*, from 127 deaths registered in 1908, to 46 registered in the year 1909. Of the deaths in the latter year 23 were of males and 23 were of females.

The following tabular statement gives the unions of Ireland in which the deaths occurring from cerebro-spinal fever were registered in the year 1909:—

UNION.	Total No. of Deaths.	Males.	Females.
Belfast, ...	16	6	10
Dublin, South, ...	11	7	4
Lisburn, ...	5*	1	4
Ballinasloe, ...	2	2	—
Athy, ...	1	1	—
Castleblayney, ...	1	1	—
Cork, ...	1	1	—
Croom, ...	1	—	1
Dublin, North, ...	1	—	1
Enniscorthy, ...	1	1	—
Gort, ...	1	1	—
Killarney, ...	1	1	—
Larne, ...	1	—	1
Lurgan, ...	1	1	—
Navan, ...	1	—	1
Rathdown, ...	1	—	1

These deaths all appertain to Belfast.

Influenza.—Since the year 1890 the mortality from influenza has become a factor of importance in the statistics of Ireland. From a small number of deaths attributed to "influenza" in 1889, a sharp rise to a rate of 0·36 per 1,000 took place in the year 1890; in 1892 the recorded rate was 0·81 per 1,000, and in 1900 the high death-rate of 1·05 per 1,000 was reached; in the year under notice (1909) the deaths attributed to influenza numbered 1,303, and correspond to a death rate of 0·30 per 1,000 of the population of Ireland estimated to the middle of the year. Of the deaths 627 were of males and 676 were of females.

In Table XII., on page xxiii, the mortality from influenza is given by counties and by certain age-periods; it may be seen therein that, in the province of Leinster, the highest county rate was in the King's County, namely, 6·8 per 10,000, and the lowest was 1·8 per 10,000 in each of Louth and Wexford counties. In Munster the highest rate was in Tipperary, South Riding (2·1 per 10,000), and the lowest (0·5 per 10,000) in the county and county borough of Waterford; in Ulster the highest rate (6·7) was in Tyrone, and the lowest (2·2) in Belfast county borough; and in Connaught the highest rate was in Leitrim (4·5) and the lowest was 1·8 per 10,000 each in Galway and Mayo counties. The statistics of age appear to show that the mortality from influenza is greatest after the age of 55 years, as 834 persons whose deaths were registered out of a total of 1,303, had passed this age.

Further particulars relating to the mortality from influenza in the unions of Ireland may be seen in the abstracts.

Rabies (Hydrophobia).—Eleven years have ended since any mortality from rabies has been recorded for Ireland. In the year 1898 such deaths numbered 4.

Puerperal Septic Diseases.—The deaths under this heading included 139 deaths from puerperal septicæmia, 8 from puerperal pyæmia, 15 from phlegmasia dolens, and 60 deaths classified to *puerperal fever*. It is desirable to discontinue the use of the latter term, which has been removed from the official nomenclature of diseases (see pages 7 and 229, 1906 Edition). The total of the deaths enumerated above was 222, being 33 over the number registered in the year 1908, and 5 over the average of the 10 years, 1899-1908. Further reference is made to these deaths in the paragraph on page xxxvi, which deals with the deaths of women associated with pregnancy and childbirth and in the table which accompanies it.

TABLE XIII.—Deaths of Women in Ireland in 1909 definitely returned as either caused by or associated with Pregnancy or Childbearing *

Accidental Violence, ...	2	—	—	1	1	—

These deaths are included in the general tables of Causes of Death.

Septicæmia.—Of 97 deaths from septicæmia (not otherwise defined), 57 were of males and 40 were of females; there were of males 17 deaths from pyæmia, 46 from *phlegmon, carbuncle,* and 5 from other infective processes, the corresponding numbers of deaths of females from these causes being 11, 26 and 5.

Pneumonia.—Under the heading "pneumonia," the deaths from lobar-pneumonia, broncho-pneumonia, epidemic pneumonia, and *pneumonia* (not defined) are arranged. Such deaths in the aggregate for the year 1909 amounted to 4,310, and were equal to a rate of 0·99 per 1,000 of the estimated population. In Table IX. it can be seen that the death-rate for pneumonia in the year 1909 was the highest recorded since the year 1899, and from a further reference to Diagram No. 4 in the Decennial Report for the years 1891-1900, it may be gathered that from the year 1888 the rate from pneumonia has increased from 0·64 in 1888 to 0·99 per 1,000 in the year 1909. The deaths from pneumonia constitute nearly 6 per cent. of all deaths registered. Of the total deaths from all forms of pneumonia, 2,475 were deaths of males and 1,835 were deaths of females; of the former figure 173 were deaths from lobar pneumonia, 736 were deaths from broncho-pneumonia, and 1,566 were deaths from *pneumonia* (not defined); and of the 1,835 deaths of females, 117 were from lobar pneumonia, 662 were from broncho-pneumonia, one was from epidemic pneumonia, and 1,055 were from *pneumonia* (not defined).

It can be calculated from the abstracts by ages and diseases that of the deaths from lobar pneumonia only about 17 per cent. were under the age of 20 years, and of the deaths from broncho-pneumonia over 60 per cent. were under the age of 20 years.

Of the total deaths from all forms of pneumonia, 1,818 occurred in the unions containing county boroughs, as follows:—In Belfast 737 deaths, in North Dublin union 371 deaths, in South Dublin union 388 deaths, in Cork union 185 deaths, in Londonderry 55, in Limerick 52, and in Waterford 30; these figures in the aggregate constitute about 42 per cent. of the total deaths from pneumonia.

TUBERCULOSIS.

The decrease in the number of deaths (386) from all forms of tuberculous disease in the year 1908—to which my predecessor drew special attention in the Annual Report for that year, and largely attributed the result to the work of Her Excellency the Countess of Aberdeen as carried on by the Women's National Health Association—has been followed in the year 1909 by a further decrease of 699 as compared with the year 1908. This is a matter for further gratification, as it shows a decrease of 1,085 deaths in the year 1909, as compared with the number registered in the year 1907. This decrease means that the average daily number of persons whose deaths from tuberculous disease were registered in Ireland was 3 less in the year 1909 than in the year 1907. Referring to the work carried on by Her Excellency, I am able to a still greater extent to testify to the benefits derived from the continual influences of the Women's National Health Association, the operations of which, by means of its numerous branches, are now being so widely spread through the country, regarding which I beg to submit the following notes which have been furnished, among others, during the year, by the Registrars of deaths who are also Medical Officers of Health :—

One Registrar states.—" Great improvement in the houses of the working class, as regards cleanliness and fresh air."

Another reports.—" All sanitary recommendations made by me are being carefully attended to by the District Council."

From another district I received the following report.—" People are becoming keenly alive to the necessity of preventive measures against tuberculous disease."

Again.—" The houses in the district are much better ventilated and kept cleaner during the past quarter, due to sanitary lectures which have been given in the district; still there is great room for improvement as regards cleanliness, fresh air, &c."

Another Registrar's Report.—" The local branch of the Women's National Health Association has applied by deputation to the Rural District Council for a shelter for tuberculosis patients."

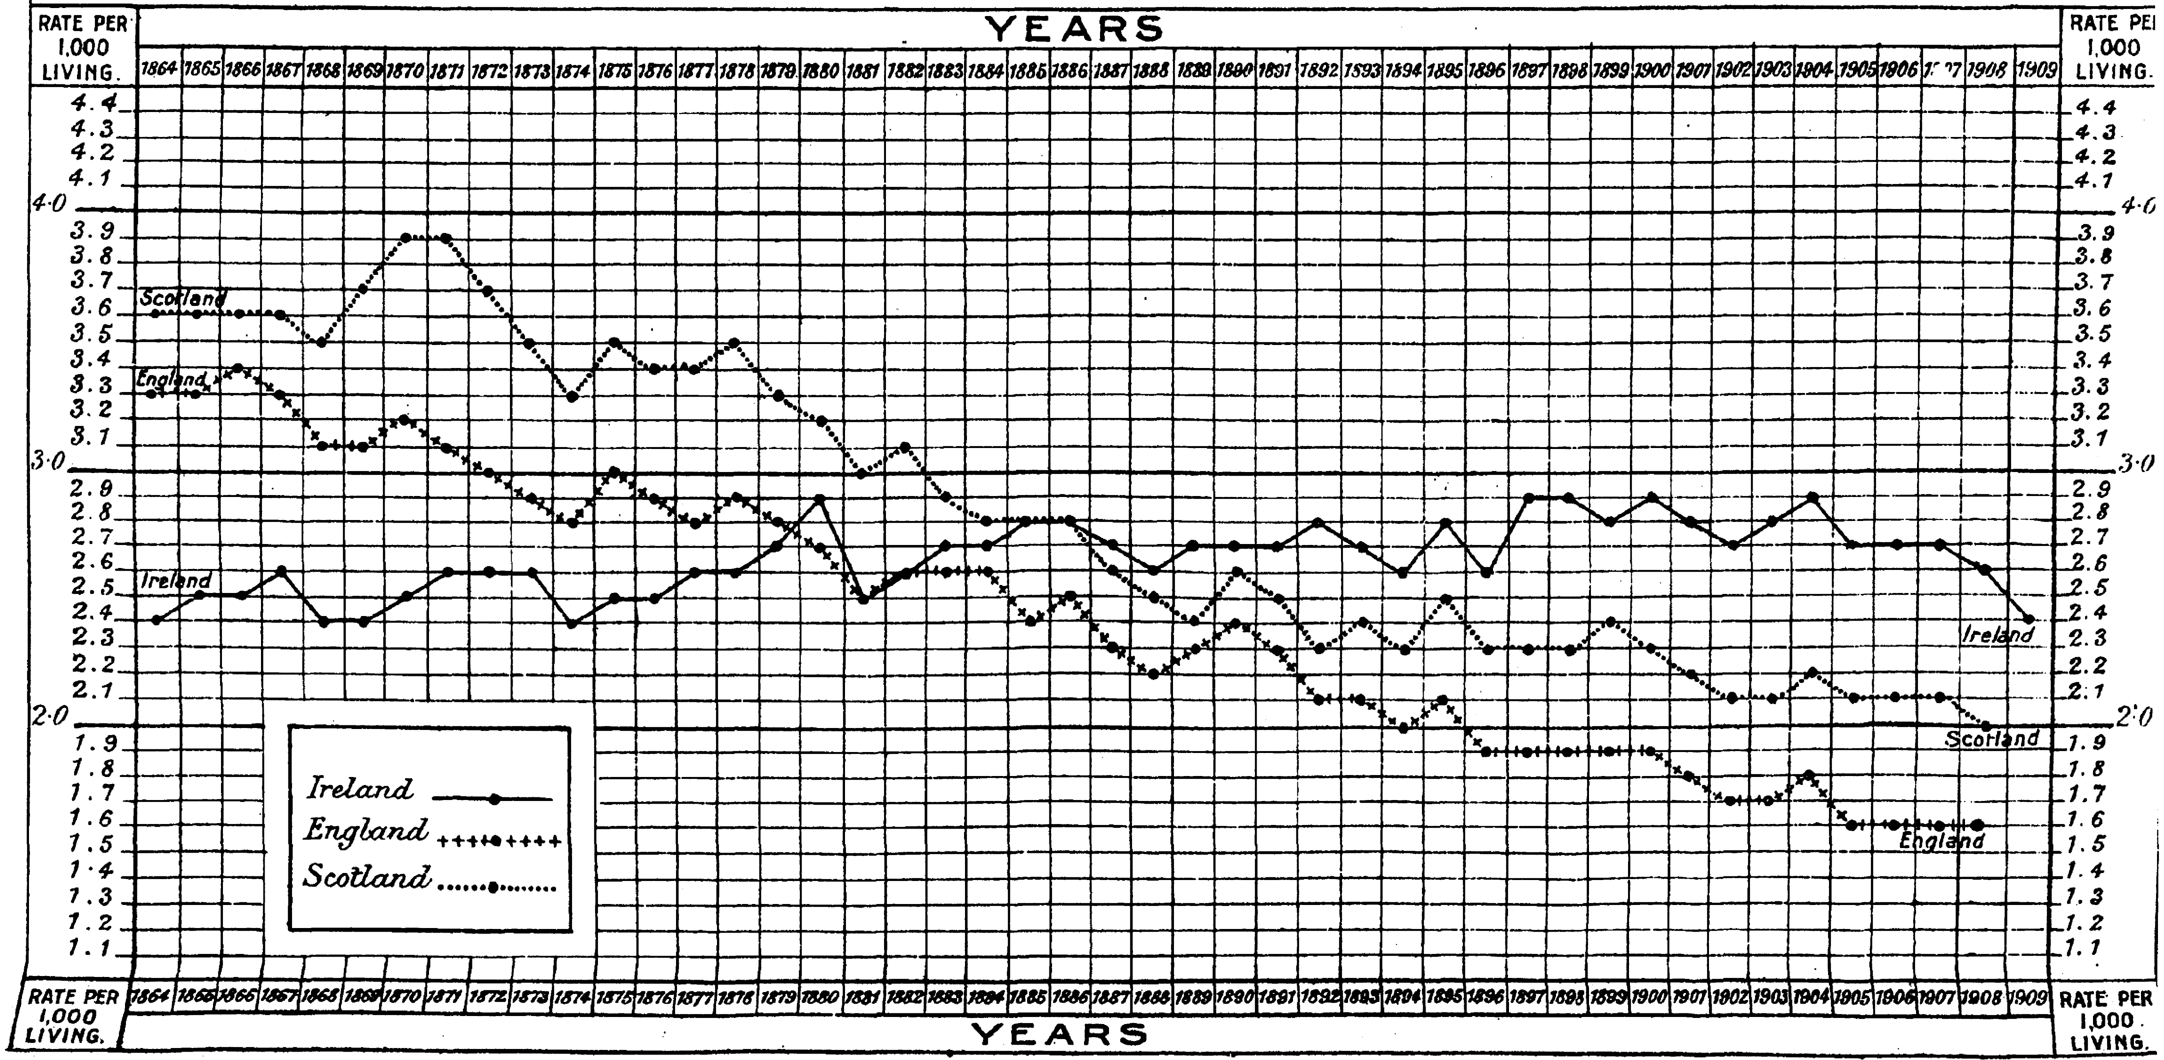
Later on in the year the same Registrar reports.—" The Rural District Council have consented to give the *shelter* applied for by the local branch of the Women's National Health Association here."

The above notes harmonise with the simple health principles that are advocated by the Women's National Health Association, which include the following :—The advantages of adequate ventilation of dwellings and the practice of the open window ; the selection, use, and proper cooking of nourishing foods ; the necessity for cleanliness in person and in all the home surroundings, together with instruction of both mothers and children as to rules of health, and as to how disease may be prevented and checked ; all which have had their influence, in co-operation with various measures for the public health which are being carried out by Local Authorities, and by the advice of Medical Officers of Health in various parts of the country. In addition, the considerably increased number of trained District Nurses now working under Local Committees and medical supervision, and the greater attention paid to instruction in hygiene in the National Schools are bearing fruit, all these agencies doing their share, each lending their aid to the other in bringing about the reduction in the mortality from all forms of tuberculosis.

Lady Aberdeen, as founder and President of the Women's National Health Association, and all those working with her, are to be congratulated on the continued measure of success which has attended their labours during the year now under review.

TUBERCULOSIS.

DIAGRAM No. 3.—Showing the Death-rate in Ireland, as compared with England and Scotland, during each of the forty-six years 1864-1909.



To face page XXVI

As already stated, the decrease in the number of deaths from tuberculous disease which was reported in the year 1908, namely, 386, has been followed by a further decrease of 699 in the year 1909, now under notice, as compared with the year 1908. The total number of deaths in the former year was 11,293, represented by a rate ot 2·6 per 1,000, and in the latter year the total was 10,594, represented by a rate of 2·4 per 1,000 of the population of Ireland estimated to the middle of the year 1909.

It will be seen that there has been a reduction of over 6 per cent. in the mortality from tuberculous disease in the year 1909, in comparison with the year 1908. Notwithstanding this reduction it appears that, out of 7 persons whose deaths were registered in Ireland in the year 1909, one was the victim of tuberculous disease, or, in other words, over 14 per centum of the mortality in Ireland in the year 1909 was caused by tuberculous disease.

In order to bring the numerical statements regarding tuberculous mortality in Ireland clearly before your Excellency, I have reproduced the diagram showing for England and Wales, for Scotland and for Ireland comparative figures of recorded death-rates from the year 1864, and have also constructed a new diagram (No. 4), which is an analysis of the Irish total rates in Diagram No. 3, showing separate rates for the sexes, and also separate rates for tuberculous phthisis (*phthisis*) for the same series of years.

In Diagram No. 2, the preponderance of the tuberculous rate is shown in comparison with twenty-one principal causes of deaths, and in the pillar diagram on infant mortality (Diagram No. 6) the mortality due to tuberculous disease amongst infants is depicted.

In addition to the diagrams and tables which appear in this text, further information regarding the ages of the deceased and the localities in which the deaths were registered, will be found in the abstracts, commencing on page 120.

In the following table the numbers and death-rates per 1,000 of the population for all forms of tuberculous disease and for tuberculous phthisis (*phthisis*) are given for the years 1899-1909, with annual averages for the years, 1899–1908.

TABLE showing the number of Deaths from all forms of Tuberculous Disease registered in Ireland during the Years 1899–1909, with the number of Deaths from Tuberculous Phthisis and the respective rates per 1,000 of the population represented thereby.

YEARS.	Deaths from all forms of Tuberculous Disease.		Deaths from Tuberculous Phthisis (*Phthisis*).	
	Number.	Rate per 1,000.	Number.	Rate per 1,000.
1899, ...	12,828	2·8	9,480	2·1
1900, ...	12,859	2·9	10.076	2·3
1901, ...	12,335	2·8	9,549	2·1
1902, ...	11,837	2·7	9,400	2·1
1903, ...	12,180	2·8	9,559	2·2
1904, ...	12,694	2·9	9,833	2·2
1905, ...	11,882	2·7	9,216	2·1
1906, ...	11,756	2·7	8,933	2·0
1907, ...	11,679	2·7	8,828	2·0
1908, ...	11,293	2·6	8,511	1·9
Averages, 1899–1908,	12,135	2·7	9,339	2·1
1909,	10,594	2·4	8,051	1·8

It may be seen that during the above period the high rate of 2·9 per 1,000 was reached in each of the years 1900 and 1904, but that since 1904 there has been a gradual decline to 2·4 per 1,000 in the year under notice.

Of the total deaths from all forms of tuberculous disease 5,294 were of males and 5,300 were of females; the former figure comprises 4,021 deaths from tuberculous phthisis (*phthisis*), 364 deaths from tuberculous meningitis, acute hydrocephalus; 102 deaths from tuberculous peritonitis; 71 deaths from *tabes mesenterica*; one death from lupus, 322 deaths from tuberculous disease of other organs or parts, 398 deaths from general tuberculosis, or tuberculosis not otherwise defined, and 15 deaths from *scrofula*. The total deaths of females (5,300) from tuberculous disease include 4,030 from tuberculous phthisis (*phthisis*); 364 from tuberculous meningitis, acute hydrocephalus; 139 from tuberculous peritonitis, 89 from *tabes mesenterica*; 9 from lupus, 263 from tuberculous disease of other organs or parts, 391 from general tuberculosis, or tuberculosis not otherwise defined, and 15 from *scrofula*.

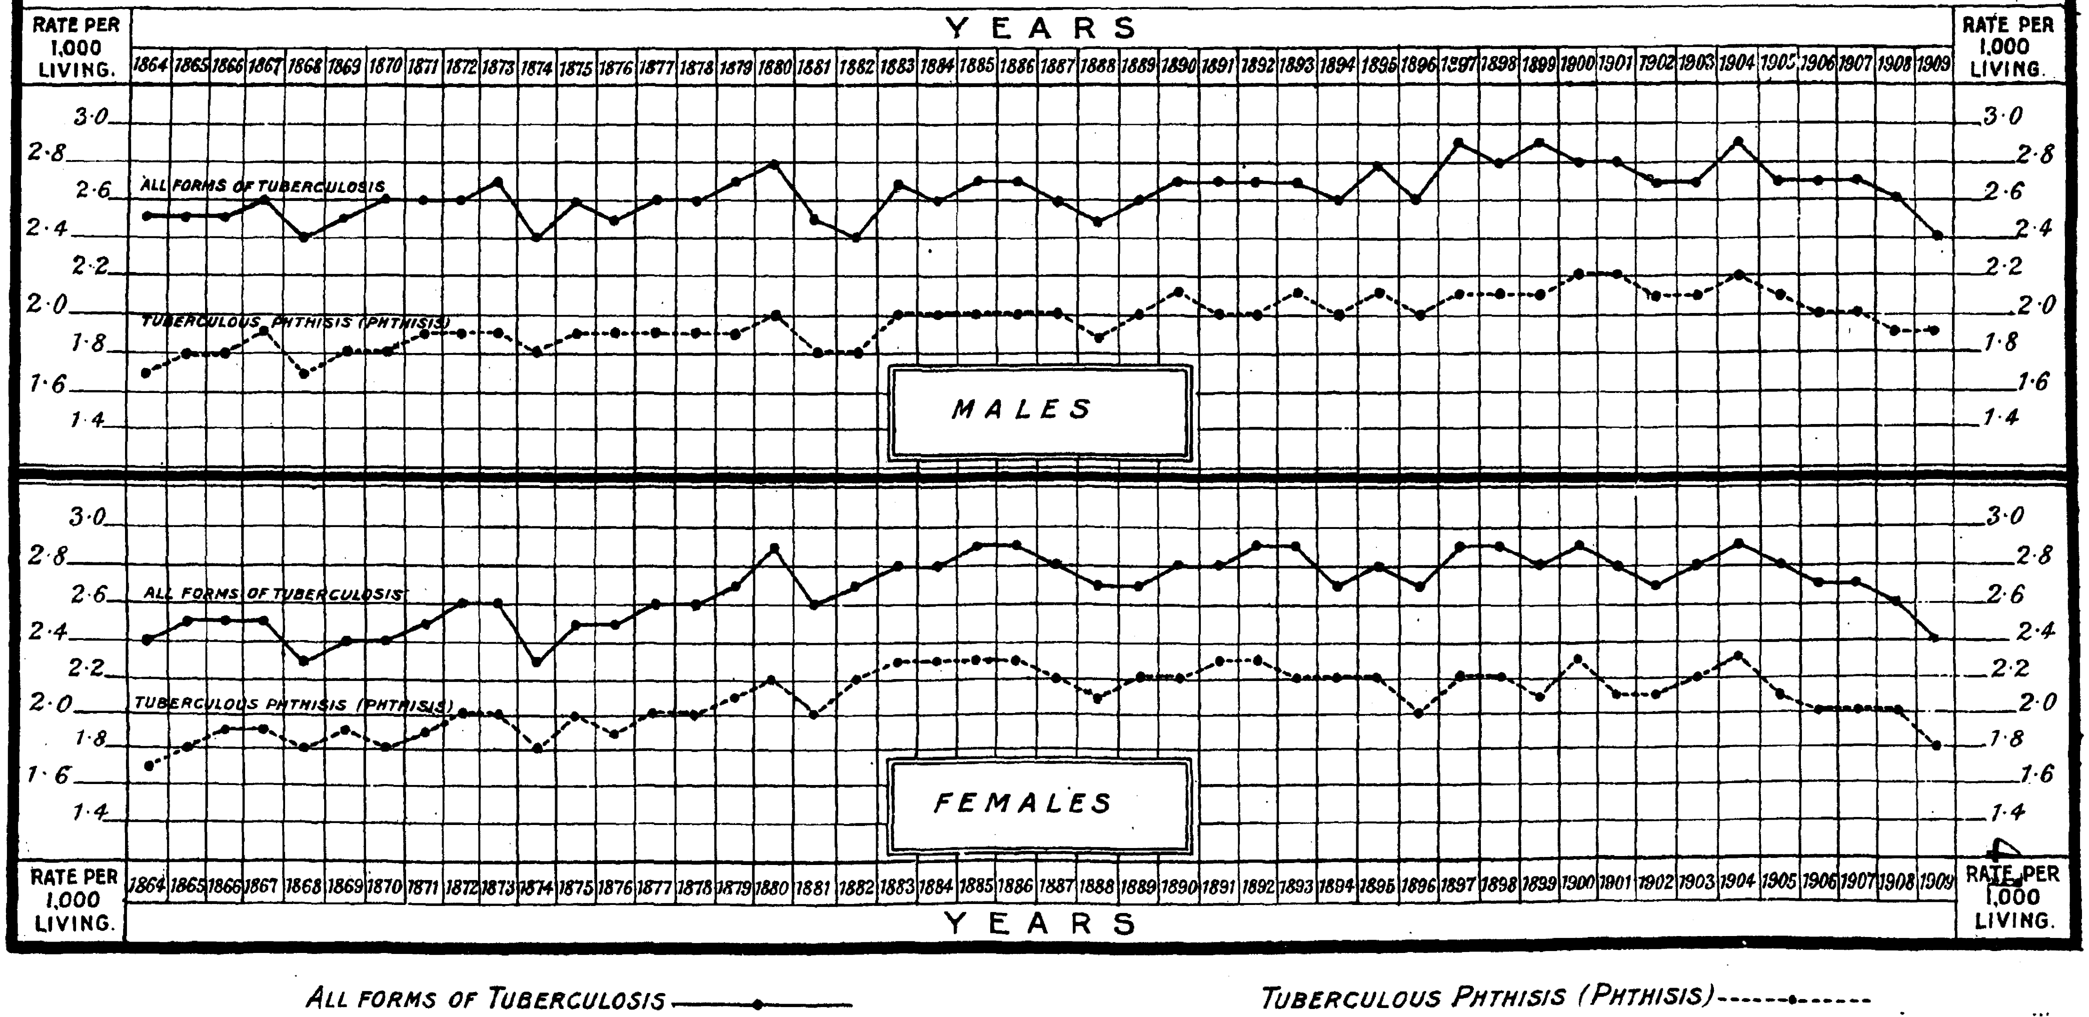
Tuberculous Phthisis (*Phthisis*).—From the foregoing table it appears that the deaths from tuberculous phthisis (*phthisis*) numbered 8,051, and were 460 less than the number registered in 1908, and 1,288 below the annual average for the years 1899-1908. Of the total (8,051), there were 4,021 deaths of males and 4,030 deaths of females, these numbers corresponding to rates of 1·85 and 1·83 per 1,000 of the male and female population, respectively. In the table which follows, the numbers, the rates, the ages and sexes of the decedents from tuberculous phthisis (*phthisis*) are given. In the aggregate the death-rates for the sexes are nearly equal, being for males 1·85 per 1,000 and for females 1·83 per 1,000; it will be seen that in the age-periods from 5 to 25 years the death-rate of the females exceeds that of the males, while in the later age-periods the death-rate of the males exceeds that of the females.

Age-Periods.	Deaths from Tuberculous Phthisis (*Phthisis*) in Ireland.					
	Total of both Sexes.		Of Males.		Of Females.	
	Number.	Rate per 1,000.	Number.	Rate per 1,000.	Number.	Rate per 1,000.
0–5 years, ..	166	0·38	86	0·39	80	0·38
5–10 „ ..	130	0·29	60	0·27	70	0·32
10–15 „ ..	338	0·75	109	0·47	229	1·04
15–20 „ ..	1,004	2·17	384	1·65	620	2·68
20–25 „ ..	1,299	2·98	627	2·92	672	3·04
25–35 „ ..	2,275	3·53	1,198	3·78	1,077	3·29
35–45 „ ..	1,437	3·04	745	3·23	692	2·85
45–55 „ ..	735	1·81	416	2·17	319	1·50
55–65 „ ..	440	1·28	259	1·55	181	1·02
65–75 „ ..	204	1·09	122	1·28	82	0·89
75 and upwards, ..	23	0·25	15	0·33	8	0·17
Total all ages, ..	8,051	1·84	4,021	1·85	4,030	1·83

From this table it appears (as also for the year 1908) that the greatest mortality for both males and females occurred in the age-period of 25–35 years, being for the former 3·78 per 1,000 of the male population, and for the latter 3·29 per 1,000 of the number of females estimated to be living at this age-period; the corresponding rates in the year 1908 were 3·78 and 3·56, respectively, the rate for males remaining the same, while a reduction from 3·56 in 1908 to 3·29 in 1909 is shown for the females at this age-period.

TUBERCULOSIS.

Diagram No. 4. Showing for the whole of Ireland by Sexes the Death Rates from All Forms of Tuberculous Disease and from Tuberculous Phthisis *(Phthisis)* for each of the 46 years, 1864 to 1909.



To face Page XXVIII.

The following table gives certain information regarding the mortality from tuberculous disease among the several social classes in the Dublin Registration Area for the year 1909, as derived from the Registrar-General's Yearly Summary of the Weekly Returns.

Class.	Occupation or Social Position.	Annual Rate for the Dublin Registration Area, per 1,000 of the Population in 1901 represented by the Deaths registered in 1909 from		
		All Forms of Tuberculous Disease.	Tuberculous Phthisis (*Phthisis*).	Other Forms of Tuberculous Disease.
	CLASSES.			
	Death-rate from Tuberculous Disease in Families of the:—			
I.	PROFESSIONAL AND INDEPENDENT CLASS, ...	0·63	0·29	0·34
II.	MIDDLE CLASS, ...	2·36	1·76	0·60
III.	ARTISAN CLASS AND PETTY SHOPKEEPERS, ...	2·94	2·19	0·75
IV.	GENERAL SERVICE CLASS, ...	3·69	2·31	1·38
	PROFESSIONAL AND INDEPENDENT CLASS.			
I.	1. Clerical, Medical, Legal and other professions; Naval and Military Officers and Heads of Public Departments, ...	1·41	0·64	0·77
	2. Merchants and Manufacturers, Higher Class, ..	—	—	—
	3. Persons of Rank and Property not otherwise described,	—	—	—
	MIDDLE CLASS.			
II.	4. General Body of Officials—Civil Service, Banking, &c.,	1·82	1·30	0·52
	5. Traders (except Petty Shopkeepers), Business Managers, &c., ...	1·59	1·04	0·55
	6. Clerks and Commercial Assistants, ...	2·92	2·33	0·59
	7. Miscellaneous—including all Householders in Second Class Localities not included in above, ...	2·52	1·85	0·67
	ARTISAN CLASS AND PETTY SHOPKEEPERS.			
III.	8. Working Engineers, Engravers, Printers, Watchmakers, and Jewellers, ...	2·94	2·23	0·71
	9. Building and Furnishing Trades, ...	2·92	2·05	0·87
	10. Clothing Trades, ...	2·54	2·02	0·52
	11. Food Supply Trades, ...	2·27	1·73	0·54
	12. Other Trades and Callings ranking with Trades, ..	3·85	3·00	0·85
	13. Petty Shopkeepers, ...	1·52	0·63	0·89
	GENERAL SERVICE CLASS.			
IV.	14. Army, Police, Postal Delivery, and Prison Services, &c.,	1·94	1·19	0·75
	15. Domestic Servants, ...	1·31	1·04	0·27
	16. Coach and Car Drivers, Vanmen, &c., ...	4·24	3·06	1·18
	17. Hawkers, Porters, Labourers, &c., ...	4·83	2·88	1·95

From the above table it will be seen that the rate per 1,000 of the 1901 Census population, represented by deaths from all forms of tuberculous disease registered as occurring among the professional and independent class was 0·63; among the middle class the rate per 1,000 was 2·36; among the artisan class and petty shopkeepers it was 2·94; and in the families of the general service class the rate for tuberculous disease was 3·69 per 1,000.

Tuberculous Meningitis.—There was a decline from 826 deaths caused by tuberculous meningitis, as registered in 1908, to 728 in 1909, the average for the preceding 10 years being 799. The deaths in 1909 are equivalent to a rate of 0·17 per 1,000 of the estimated population. Of the total, there were 364 deaths of males (this number includes 12 deaths from acute hydrocephalus) and 364 deaths of females, including 5 deaths from acute hydrocephalus. Of the males, 191, were deaths of children under 5 years of age, the deaths of females at this age numbering 157.

Tuberculous Peritonitis.—The aggregate number of deaths returned as being caused by tuberculous peritonitis and *tabes mesenterica* was 401, showing a decline of 80 in comparison with the number registered from these causes in the year 1908.

The total is equal to an annual rate of 0·09 per 1,000 of the estimated population. Of the deaths of males 102 were from tuberculous peritonitis, and 71 from *tabes mesenterica*, the corresponding figures for deaths of females being 139 and 89. There were, moreover, 152 deaths classified to tuberculous enteritis, which are included in the total for tuberculous disease of other organs or parts.

Other Forms of Tuberculous Disease.—This heading includes deaths from lupus, tuberculous disease of other organs or parts (including deaths from tuberculous enteritis), general tuberculosis, deaths returned as from tuberculosis and deaths from *scrofula*; these in the aggregate amounted to 1,414, and correspond to a rate of 0·32 per 1,000, as against 1,475 with a rate of 0·34 per 1,000 for the year 1908.

TABLE XIV.—Showing the Number of Deaths from the following causes, viz., Tuberculous Phthisis (*Phthisis*), Tuberculous Meningitis, Tuberculous Peritonitis and *Tabes Mesenterica*, Other Forms of Tuberculous Disease and *Scrofula* and from all causes, registered in Ireland in each of the thirty-nine years, 1871-1909, with the Rate per 1,000 of Estimated Population represented by (*a*) Deaths from the above-mentioned forms of Tuberculosis, (*b*) Deaths from All Causes; and the percentage of total Deaths caused by the tuberculous diseases referred to.

Alcoholism.—The figures presented (173 deaths—of males 143 deaths and of females 30) cannot be regarded as the real figures representing the mortality caused by the abuse of alcoholic liquids, as there are obvious difficulties presented in framing the certificates for such deaths, and in many instances the cause of death is referred to the organ which has been injured by intemperance; hence it is among the mortality figures from diseases of the stomach, the liver, the heart, the kidneys, and the nervous system, and amongst the deaths from pneumonia, that the balance of the real mortality figure for alcoholism is to be sought. From these circumstances it appears a difficult matter to arrive at the truth regarding the effect of alcoholic beverages upon the death-rate of the country, and until it is possible to compare the statistics of two communities living under similar conditions, in one of which the use of alcohol is permitted, and in another in which its use is prohibited, the question will have to remain unsettled.

The figure (173) shows an increase of 21 over that for 1908, but is under the number of deaths assigned to alcoholism in 1907 by 48. As shown in the reports of the criminal statistics, it is a matter of much congratulation to note the large reduction in prosecutions for drunkenness which is taking place yearly in Ireland.

In the examination of the causes of death, occasionally it occurs that a death is certified as having been caused by "alcoholic poisoning," and it has been found as a result of many enquiries that this term is sometimes used in a loose signification to represent alcoholism. When a death from acute alcoholic poisoning occurs, the certifier of death would greatly facilitate the work of this Department by using the term acute before alcoholic poisoning, and stating the amount and nature of the alcoholic liquid used, and also the time that elapsed from the imbibition of the alcoholic liquid to the time of the death, if these facts can be ascertained.

Rheumatic Fever, Rheumatism.—The deaths under this heading include those from acute rheumatism, rheumatic fever, *rheumatism of heart*, chronic rheumatism, rheumatic arthritis, and *rheumatic gout* and they number 722. Of this total there were 78 deaths of males and 81 of females from acute rheumatism, rheumatic fever; 23 deaths of males and 31 of females from *rheumatism of heart*: 179 deaths of males and 228 of females from chronic rheumatism; and 34 deaths of males and 68 of females from rheumatic arthritis, *rheumatic gout*.

Gout.—Of 6 deaths attributed to gout, 5 were of males and one was of a female.

MALIGNANT DISEASE.

For the years 1907 and 1908, the Irish figures for cancer mortality showed a reduction year by year, having declined from 0·793 per 1,000 in 1906, to 0·762 in 1907, and further declined to 0·758 in 1908. In the year 1909, now under notice, the rate rose to 0·801, the latter being the highest rate recorded in Ireland since the initiation of central registration. In this connection it is to be borne in mind that improvements in scientific methods of pathological research, as well as the strict enquiries that are made by the statistical departments in doubtful cases would both have a tendency to apparently increase the mortality figures for malignant disease. It will be seen that more than 40 per cent. of all deaths from malignant disease are of persons aged 65 years and upwards. The deaths classified to malignant disease amounted to 3,502, and included those deaths which were returned as having been caused by carcinoma, sarcoma, and by cancer, malignant disease (undefined). Of the total deaths, 1,631 were of males, and 1,871 were of females, these numbers corresponding to the respective rates of 0·75 and 0·85 per 1,000 of males and females living in the population of Ireland.

When studying the mortality and ages rates for malignant disease it is usual to exclude the deaths that occur of persons under the age of 35 years, these latter not being numerous. In order to enable this to be done, as heretofore, the death-rates from malignant disease by age-periods and sexes are shown in Table XV; there it may be seen that the highest rate occurred among males aged from 65 to 75 years, and also among females the highest rate occurred at the same age-period.

Information is given in the following statement of the parts affected by the *tumours*, (not including those of the brain, uterus, or ovary), which caused the deaths of 19 males and 34 females during the year 1909. In all these cases the *tumours* were not malignant, or further information concerning their nature was not forthcoming.

DISEASES OF PARTICULAR ORGANS.

In this section the deaths "*caused by certain morbid conditions incident to various parts*," are brought under notice. This group for the purposes of description is dealt with under 12 divisions, as may be seen in the summary, commencing on page 120, of deaths by diseases, sexes and ages.

The aggregate total of the deaths caused by the morbid conditions referred to was 31,889 or 43 per cent. of all the deaths registered in Ireland during the year 1909.

Meningitis.—The total deaths from meningitis—inflammation of the brain or its membranes—was 719, a figure equal to an annual rate of 0·16 per 1,000 of the estimated population. Of the total deaths 384 were of males and 335 were of females. In the preceding year the total deaths from this disease numbered 760, the number of deaths of males being 416, and of females 344. In the year 1909 there were 328 deaths of children under 5 years of age or about 46 per cent. of the total deaths from meningitis.

Softening of the Brain.—An equal number (85) of males and of females were reported to have died from softening of the brain; the total (170) is 4 below the number of deaths registered as from this condition in the year 1908.

General Paralysis of the Insane.—Of the 97 deaths from general paralysis of the insane, 78 were deaths of males and 19 were deaths of females. The above total shows an increase of 17 deaths over the number registered in the preceding year.

Epilepsy.—Compared with the year 1908 there was a decrease of 18 in the number of deaths from epilepsy, from 343 in 1908 to 325 in 1909. Of the latter total 171 were deaths of males and 154 were deaths of females.

Convulsions.—On page 31, Nomenclature of Diseases, 1906, a note to infantile convulsions appears—"*This term being the name of a symptom, should only be used when more precise information is wanting. When the cause is known the return should be made under the head of that cause.*" The number of deaths attributed to *convulsions* in the year under notice was 1,181; of this figure 943 were deaths of infants under one year of age, the latter constituting 10 per cent. of the total infant mortality for the year 1909. In the year preceding, the total mortality from *convulsions* was 1,318, and the deaths of infants under one year included therein was 1,088, the average annual number of deaths from *convulsions* of infants under one year of age for the 10 years, 1899-1908, being 1,411. A comparison of the principal causes of deaths of infants will be seen in diagrams Nos. 5 and 6, and in a table on page xl. Further reference to *convulsions* is made in the section dealing with deaths of infants under one year of age.

TABLE XV.—Showing the Deaths registered from Malignant Diseases* in Ireland during the year 1909, by Sexes, Ages, and parts affected.

* Including Carcinoma, Sarcoma and Cancer, Malignant Disease.

Locomotor Ataxy.—Thirty-six males and 6 females were reported to have died from locomotor ataxy during the year; all these deaths were of persons aged 25 years and upwards. The number of deaths from locomotor ataxy registered in 1908 was 40, namely, 30 deaths of males and 10 deaths of females.

Neuritis, Peripheral and Poly-neuritis.—To one or other of the causes forming the heading to this paragraph there were classified the deaths of 22 males and 24 females.

Tumour of Brain.—In all instances when tumour of the brain is certified as a cause of death, further enquiry is made regarding the nature of the tumour, *i.e.*, whether it is syphilitic, malignant, or tuberculous. In 30 instances, replies were received which enabled that number of deaths to be more correctly classified; there remains, however, 44 deaths from tumour of brain—of males 23 and of females 21—concerning which no further information was available.

Diseases of the Heart.—More than 12 per cent. of all deaths registered is attributed to diseases or conditions of the heart, the total number so classified for the year being 9,052; of this figure 4,325 were deaths of males and 4,727 were deaths of females, the total representing a rate of 2·07 per 1,000 of the estimated population of Ireland. Under the category of heart disease the following conditions are separately tabulated:—valvular disease, chronic endocarditis (the number of deaths of males from which was 1,134, and of females 1,247), pericarditis (deaths of males 25, and of females 17). hypertrophy (deaths of males 11, and of females 2)—angina pectoris (of males, 47 and of females 16 deaths), dilatation (of males 150, and of females 119 deaths)—fatty heart (deaths of males 122, and of females, 121), and to heart diseases (undefined), syncope, heart failure, the deaths of 2,836 males, and 3,205 females were ascribed.

Diseases of Blood Vessels.—Under this general heading there were classified to cerebral hæmorrhage the deaths of 649 males and 853 females—to *apoplexy, hemiplegia*, the deaths of 586 males and 788 females—to aneurysm the deaths of 35 males and 12 females—to senile gangrene the deaths of 83 males and 81 females—to embolism, thrombosis (not cerebral) the deaths of 10 males and 11 females—to phlebitis 9 deaths of males and 9 deaths of females—to varicose veins the deaths of 5 males and 2 females—and to other diseases of blood vessels the deaths of 68 males and 31 females; the aggregate total of the foregoing deaths was 3,232, and is equivalent to an annual rate of 0·74 per 1,000 of the estimated population of Ireland.

On page 27, Nomenclature of Diseases, the following note appears in reference to each of the terms *apoplexy* and *paralysis.*—"*This term being the name of a symptom should only be used when more precise information is wanting. Where the cause is known the return should be made under the head of that cause.*"

Laryngitis and Croup.—It may be seen in the abstracts, that the number of deaths for laryngitis was, for males 76 and for females 55—for *membranous laryngitis* (non-diphtheritic), 5 for males and 7 for females—for *croup* 75 for males and 59 for females, and for other diseases of the larynx and trachea, 3 for males and 2 for females. It may also be seen that, of the total deaths (282) under the above heading, 208 were of children under 5 years of age.

Bronchitis.—The mortality caused by bronchitis is an important factor in the statistics of Ireland, as may be seen in Diagram No. 2. Bronchitis stands fourth in the series of the principal causes of death; the actual number of deaths from this disease for the year under notice was 7,635, corresponding to a rate of 1·75 per 1,000 of the population. Of the total deaths from bronchitis 3,501 were of males and 4,134 were of females. The total deaths from diseases of the respiratory system (excluding pneumonia) was 9,029, and the corresponding annual rate 2·07 per 1,000.

Pleurisy.—There was an increase of 56 in the number of deaths from pleurisy registered in the year 1909 over the number registered in 1908, the number in the former year being 205 and in the latter 149. Of the 205 deaths, 130 were of males and 75 were of females, and include the deaths of 17 males and 3 females from empyema, regarding the cause of which more definite information could not be ascertained.

During the six years, 1904 to 1909 the deaths of 177 persons were returned in the certified copies of the registers as having been caused primarily by empyema.

These deaths, provisionally tabulated to pleurisy, were, as the result of special inquiry, transferred to the specified causes as shown in the following table:—

Table showing for the years 1904-1909, by age-periods, the diseases or causes with which the deaths directly attributed to Empyema of 177 persons (134 males and 43 females) were associated.

Diseases or causes (by Age-Periods) with which 134 Deaths of Males from Empyema were associated.

It will be observed from the above that of the 177 deaths from empyema registered during the period covered by the table, the deaths of 69 persons were found to be associated with tuberculous disease, 52 of these being deaths of males and 17 of females.

Gastric Ulcer.—During the year the number of deaths from ulcer of the stomach, as registered, was 325, and includes the deaths of 149 males and 176 females; in the three preceding years the total of such deaths numbered 300, 295, and 333, respectively.

Appendicitis.—Deaths assigned to appendicitis, perityphlitis were 139 in number, including 77 deaths of males and 62 deaths of females; in each of the three preceding years, deaths from the above causes were 136, 120, and 136. In 17 of the 139 deaths for 1909, the cause of death was altered from *peritonitis* to appendicitis as the result of inquiries made in the course of classification.

Peritonitis.—In the year 1905 there were 296 deaths, in which *peritonitis* was returned as the cause of death; in the following year the number shows a decline to 28, in 1907 to 115, in 1908 to 113, and in the year 1909 to 105. This latter figure includes the deaths of 47 males and 58 females. The apparent decline in the figures from 1905 is coincident with the issue of inquiries asking for further information regarding the cause of *peritonitis*. For the year 1909, 181 queries were sent out, resulting in 104 replies, which afforded more accurate information; among them 17 deaths were re-tabulated to intestinal obstruction, 17 to appendicitis, 11 to gastric ulcer, 9 to tuberculous peritonitis. and 9 to accidental violence.

Cirrhosis and other diseases of the Liver. —The deaths resulting from diseases of the liver numbered 645. Of this number 382 were deaths of males, and 263 were deaths of females. Of the total deaths of males 213 were from cirrhosis of the liver; and of the total deaths of females 118 were from the same cause.

Acute and Chronic Nephritis.—Of a total of 2,083 deaths assigned to diseases of the urinary system 1,358 were of males and 725 were of females. The figure for males includes 239 deaths from acute Bright's disease, 681 from chronic Bright's disease, 11 deaths from calculus, 346 from diseases of bladder and prostate, and 81 deaths from other diseases of the urinary system. The total deaths of females (725) include 225 deaths from acute Bright's disease, 450 deaths from chronic Bright's disease, 3 deaths from calculus, 30 deaths from diseases of the bladder, and 17 deaths from other diseases of the urinary system.

Tumours and other diseases of the Ovary and the Uterus.—The deaths returned under this heading numbered 117 in the aggregate, and included 38 deaths from *ovarian tumour* and 38 deaths from *uterine tumour*, the ovarian and uterine tumours being non malignant or concerning the nature of which further information was not forthcoming.

Diseases or Accidents of Pregnancy and Childbirth.—In preparing the statistics of this all-important source of mortality, an attempt is made to classify the deaths of women, which are associated with pregnancy and with childbirth into three divisions. The first contains the deaths caused by puerperal septic conditions; the second includes the deaths from causes that are mainly the results of childbearing, or in which the fact of childbearing appears to have been the pre-disposing cause of death; and the third division includes the deaths associated with childbirth in which some pre-existing disease was most probably the cause of death. In many cases it is a difficult matter for the statistician, as it no doubt also may be for the practitioner to decide upon the merits of certain cases as to whether the death should be placed in the second or in the third division. The question of puerperal mortality has already been mentioned in page xxiv., and an inclusive table (XIII.) supplied showing all the deaths of women associated with pregnancy and childbirth by causes and ages for the year 1909. The deaths in the first division numbered 222, in the second the number was 339, and in the third division the deaths numbered 83; in the aggregate the number was 644, being over the number registered in the year 1908 by 29, but under the annual average for the preceding six years by two deaths.

The figures with the rates per 1,000 births registered during the year for each of the three conditions under which deaths of women occur during pregnancy or childbirth, also the total of such deaths, and the rate per 1,000 births registered in each of the years 1903-1909, with an average rate for the 6 years. 1903-1908, are shown in the following table :—

YEARS.	Deaths from Puerperal Septic Diseases.		Deaths from Accidents of Pregnancy or Childbirth.		Total Deaths from Puerperal Septic Diseases and Accidents of Pregnancy or Childbirth.		Deaths from causes associated with Pregnancy or Childbirth (not included in foregoing).		Total Deaths caused by or associated with Pregnancy or Childbirth.	
	Number	Rate per 1,000 Births.	Number	Rate per 1,000 Births	Number	Rate per 1,000 Births.	Number	Rate per 1,000 Births.	Number	Rate per 1,000 Births.
1903, ...	233	2·29	340	3·34	573	5·63	84	0·82	657	6·45
1904, ...	216	2·08	367	3·54	583	5·62	99	0·95	682	6·57
1905, ...	227	2·21	346	3·36	573	5·57	83	0·81	656	6·38
1906, ...	234	2·26	373	3·60	607	5·86	69	0·67	676	6·53
1907, ...	163	1·60	342	3·36	505	4·96	84	0·83	589	5·79
1908, ...	189	1·86	341	3·34	530	5·20	85	0·83	615	6·03
Average, 6 years, 1903-8	210	2·05	352	3·42	562	5·47	84	0·82	646	6·29
1909, ...	222	2·16	339	3·30	561	5·46	83	0·81	644	6·27

It may be seen from this table that the death-rate for puerperal septic diseases was 2·16 per 1,000 births registered, the rate for the accidents of pregnancy and childbirth proper was 3·30, and the rate for deaths from causes associated with pregnancy and childbirth was 0·81 per 1,000 births registered—the total of the preceding three rates being 6·27 per 1,000 births registered.

ILL-DEFINED OR NOT SPECIFIED CAUSES OF DEATH, AND UNCERTIFIED CAUSES OF DEATH.

It is the desire of all Medical Statisticians and advocates of hygienic improvement, that the diseases or conditions which cause the deaths of our countrymen and women, should be definitely and accurately recorded in the General Register Office, and that the causes should in all possible instances be duly certified by a Registered Medical Practitioner. As in previous reports, an appeal is made here to the Medical Profession of Ireland to endeavour to give an accurate and well-defined cause of death, when possible, in the death certificate. Regarding uncertified causes of death, the high percentage of such cases is an undesirable feature of Irish vital statistics, and compares unfavourably with the figures presented by the English and Scottish Registrars-General; although a slight decline in the percentage of uncertified deaths is shown for the period under notice, namely, from 25 per cent. in 1908 to 24·29 in 1909, in England and Wales the percentage of such deaths was 1·44 in 1908, and in Scotland, in 1907, it was 2·32.

VIOLENCE.

The number of deaths from all forms of violence, whether accidental, homicidal, suicidal, or by process of law, was 1,858, a number which is equivalent to an annual rate of 0·42 per 1,000 of the population of Ireland, estimated to the middle of the year 1909. Of the total, 1,663 deaths were from accident or negligence, 48 from homicide, 146 by suicide, and one, that of a man, by execution.

The deaths attributed to accidental causes include those of 431 persons (of whom 214 were under 5 years of age), from burns, scalds, or explosions, 266 from drowning, 229 from falls, 161 caused by vehicles or horses, 95 from suffocation (of these 79 were infants under one year of age), 93 from weather agencies, 32 from poisons or poisonous vapours, and 29 from weapons and implements. See abstract on page 137.

The 48 homicidal deaths include 11 of children under 5 years of age; of the total, 29 were deaths of males, and 19 of females.

Of the 146 deaths by suicide, 116 were of males, and 30 were of females.

A Table (XVI.), on page xxxviii, has been prepared, showing all the deaths from poison classed to violence, whether by accident, by suicide, or by homicide, according to sex and age, registered during the year 1909. This table also includes deaths from industrial poisoning, morphine habit, and all deaths which have been returned as being directly caused by food—such as diarrhœa due to food, ptomaine poison, and food poison.

INQUESTS.

There were 1,755 inquests returned by the Registrars during the year 1909, or one inquest in every 43 deaths registered.

AGES AT DEATH.

The following Statement shows, by sexes, the mortality from all causes in Ireland during the Year 1909, at the undermentioned age-periods per 1,000 of the number of persons living at these ages.

SEXES.	Mortality from all causes per 1,000 Living at Ages

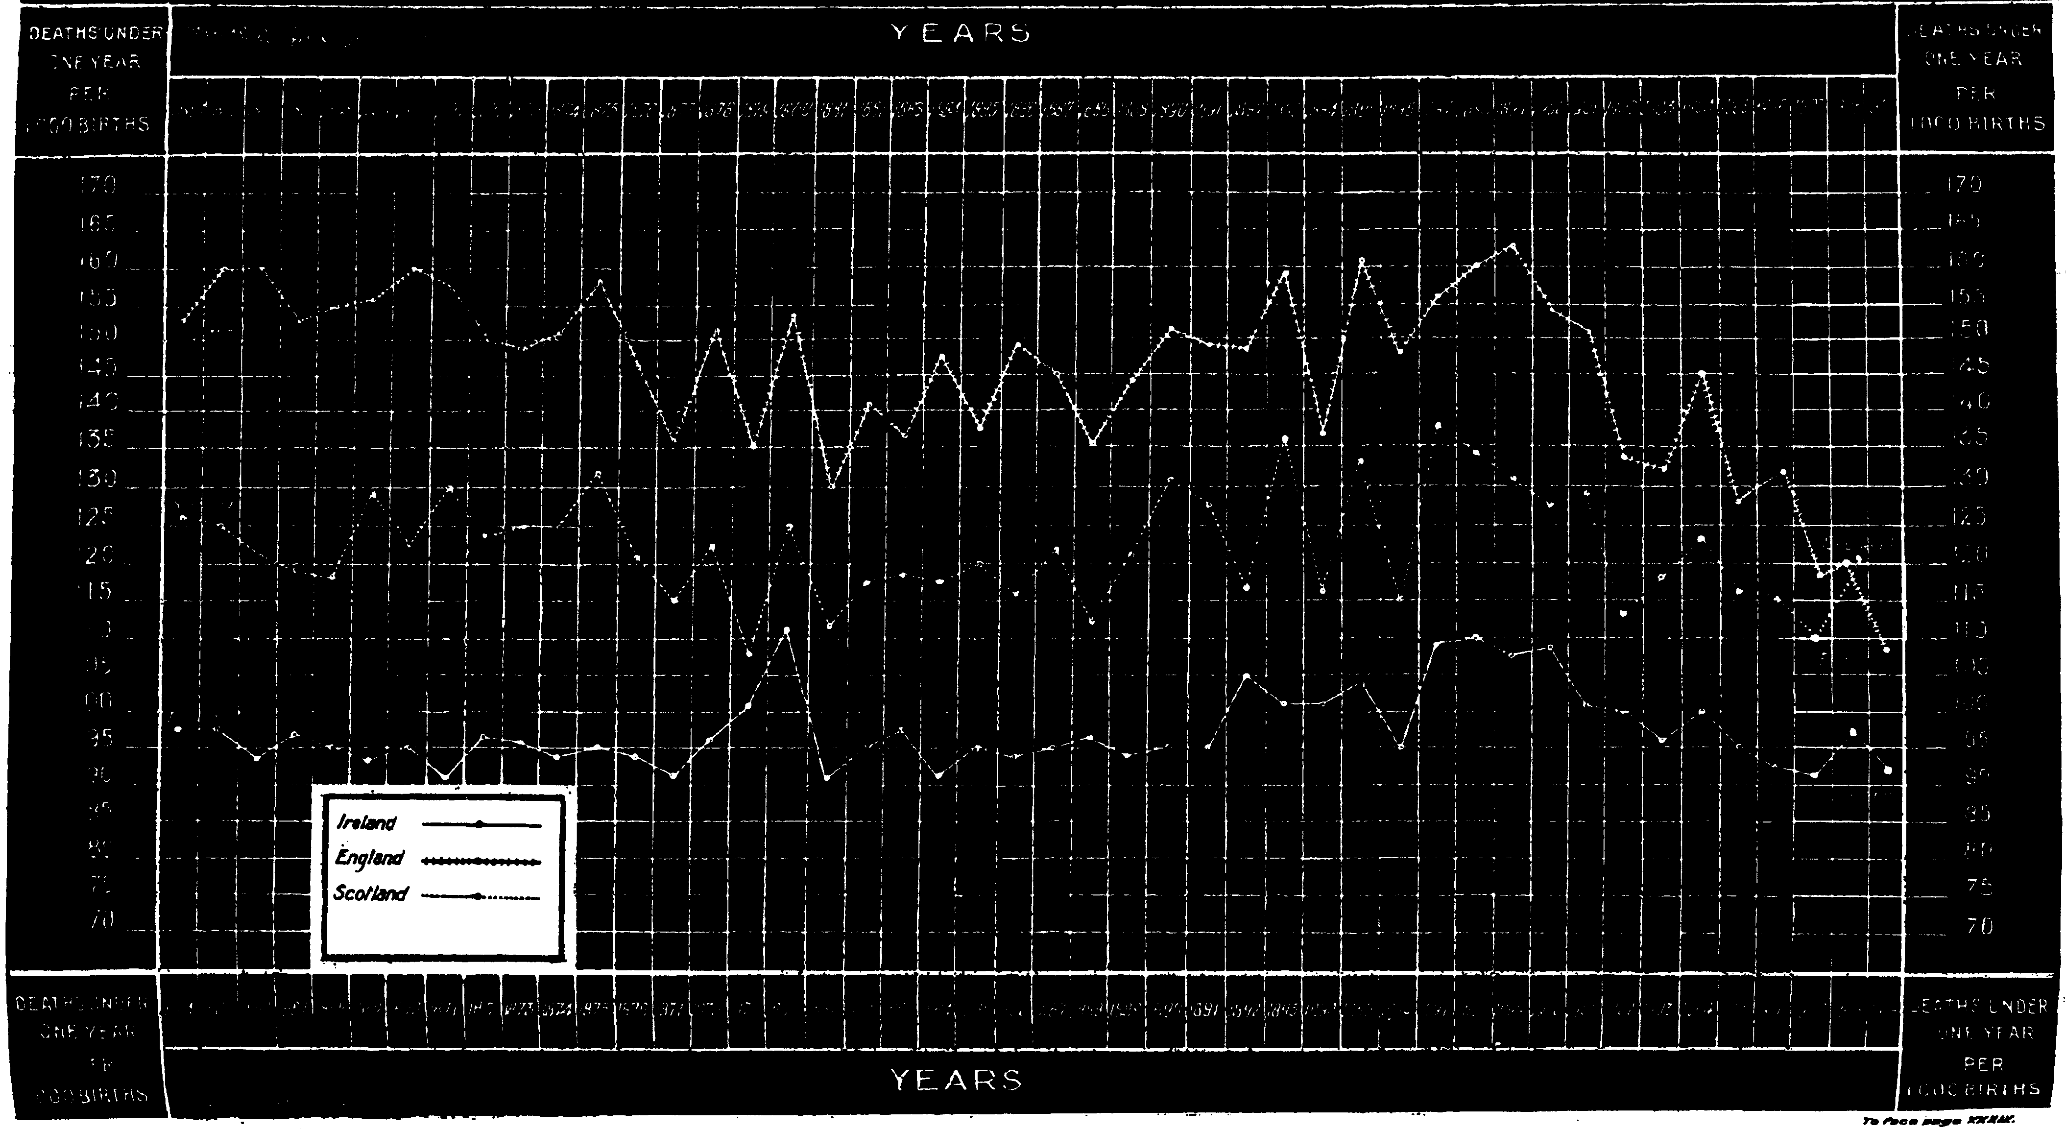
INFANT MORTALITY.

Diagram showing the Deaths of Infants under One Year of Age per 1000 Births registered in Ireland as compared with those in England and Scotland during each of the forty-six years 1864-1909.



To face page xxxiv.

AGES AT DEATH—*continued.*

The deaths of children under 5 years of age numbered 14,396—a mortality equal to 33·16 in every 1,000 of the number living at that age. Of these, 7,698 were boys and 6,698 girls; the former number representing 34·67 in every 1,000 boys, and the latter 31·57 in every 1,000 girls, under the age of 5 years.

The deaths of persons aged 65 years and upwards are equivalent to 104·73 per 1,000 of the number of the living at that age, the rate for deaths at the age-period, 65–75 years, being 78·82 per 1,000 and for deaths of persons aged 75 years and upwards it was 157·61 per 1,000 of the living at that age-period.

Of the deaths registered, 490 were of persons stated to have been aged 95 years or upwards—219 males and 271 females; of these 125 (56 males and 69 females) were returned as having been aged 100 years or upwards. In the absence of public records for remote periods, absolute verification of the ages of very old persons is not obtainable; but secondary inquiries having been made as regards persons returned during some recent years as centenarians, it was found that the age was correctly stated, in almost every instance, so far as the Registrars could ascertain.

INFANT MORTALITY.

The proportion of deaths of infants under one year of age to every 1,000 births registered in Ireland during the year 1909 was 92, the rate for males being 99 per 1,000 of the male births registered, and that for females 84; in 1908 the mortality rate for infants of both sexes was 97; the rate for males was 106, and that for females 87 per 1,000 of such births in 1908, the annual average for both sexes during the ten years, 1899 to 1908, being 99.

The diagram (No. 5), facing this page, affords a comparative view of the infant mortality rates of Ireland, England and Wales and Scotland from 1864.

In England and Wales for the year 1909 the infant mortality rate per 1,000 births registered was 109, and in Scotland for the year 1908 the rate was 121. These figures show that Ireland compares favourably, in this respect, with the sister countries. A comparison of the results, however, as regards the infant mortality in the principal urban areas in the three countries shows that Ireland generally occupies a rather unfavourable position, as may be seen in the table on page xl.

The particulars regarding mortality at ages under one year in three divisions, and for the whole of that age-period, are shown, by sexes, for the whole of Ireland, for "Civic Unions," and for the remainder of the country in the following table:—

Table showing for Ireland, for Unions containing towns which, in 1901, had a population of 10,000 inhabitants or upwards ("Civic Unions"), and for the remainder of the country, the proportion of deaths of infants by sexes at the undermentioned ages, per 1,000 births registered in the year 1909.

AREAS.	MALES.				FEMALES.				TOTAL.			
	Under 3 months.	3–6 months.	6–12 months.	Under one year.	Under 3 months.	3–6 months.	6–12 months.	Under one year.	Under 3 months.	3–6 months.	6–12 months.	Under one year.
Total "Civic Unions."	75·8	22·8	33·8	132·4	59·9	20·4	32·0	112·3	68·1	21·6	32·9	122·6
Remainder of Ireland.	47·9	13·2	15·8	76·9	40·3	10·5	13·9	64·7	44·2	11·9	14·8	70·9
Total of Ireland.	59·0	17·0	23·0	99·0	48·1	14·5	21·1	83·7	53·7	15·8	22·0	91·5

From this table it appears that the mortality in the "Civic Unions" amounted to 122·6 per 1,000 births registered, while that in the remainder of Ireland was 70·9 per 1,000.

In the table which follows, bearing on the subject of infant mortality, the death-rate of infants under one year of age is shown for the Dublin Registration Area, Belfast county borough, London, Liverpool, Edinburgh and Glasgow, from the year 1901 to the year 1909 inclusive. In Dublin during this period the mortality has declined from 168 to 141; in Belfast from 154 to 139; in London from 148 to 108; in Liverpool from 188 to 144; in Edinburgh from 148 to 119; and in Glasgow from 150 to 133 per 1,000 births registered.

Table showing the number of deaths of infants under one year of age to every 1,000 births in the Dublin Registration Area, in the county borough of Belfast, in London, Liverpool, Edinburgh and Glasgow, during the years 1901-1909.

AREAS.	Deaths of Infants under one Year of Age to every 1,000 Births.								
	1901.	1902.	1903.	1904.	1905.	1906.	1907.	1908.	1909.
Dublin Registration Area,	168	162	151	169	143	146	156	146	141
Belfast County Borough,	154	151	134	154	136	144	136	147	139
London, ...	148	140	130	145	130	131	116	113	108
Liverpool, ...	188	163	159	196	153	172	144	141	144
Edinburgh, ...	148	122	121	130	133	118	127	122	119
Glasgow, ...	150	130	144	146	131	131	130	137	133

The rates represented by the deaths of infants registered in 1909, from the principal causes are shown in the subjoined table, by age-periods, namely, under 3 months, from 3 to 6 months, and from 6 to 12 months, the total rates for these three periods being, respectively, 53·70, 15·77, and 22·05 per 1,000 births registered. Among the common infective diseases, as in the year 1908, whooping-cough caused the highest mortality, the rate for which in 1909 was 5·28 per 1,000 births; the rate for measles was 0·86, that for diphtheria and *croup*, was 0·70, and for influenza the rate was 0·58 per 1,000 births. Deaths of infants from diarrhœa, enteritis, and gastritis caused a rate of 11·59 per 1,000; tuberculous disease a rate of 3·22 per 1,000, and wasting diseases a rate of 33·51 per 1,000. Among other causes of death, bronchitis shows a death rate for infants under one year of 10·65 per 1,000 births; *convulsions* a rate of 9·18 (the deaths from *convulsions* being 10 per cent. of all deaths of infants under one year registered in 1909); the rate for pneumonia is 5·57; meningitis (not tuberculous) gives a rate of 1·44; suffocation (mainly over-laying) affords a rate of 0·77; and syphilis a rate of 0·91 per 1,000 births registered.

Table showing for Ireland the Mortality by certain causes among infants under 12 months old, per 1,000 Births registered in the Year 1909, distinguishing between those under 3 months old, 3 months and under 6 and 6 months and under 12.

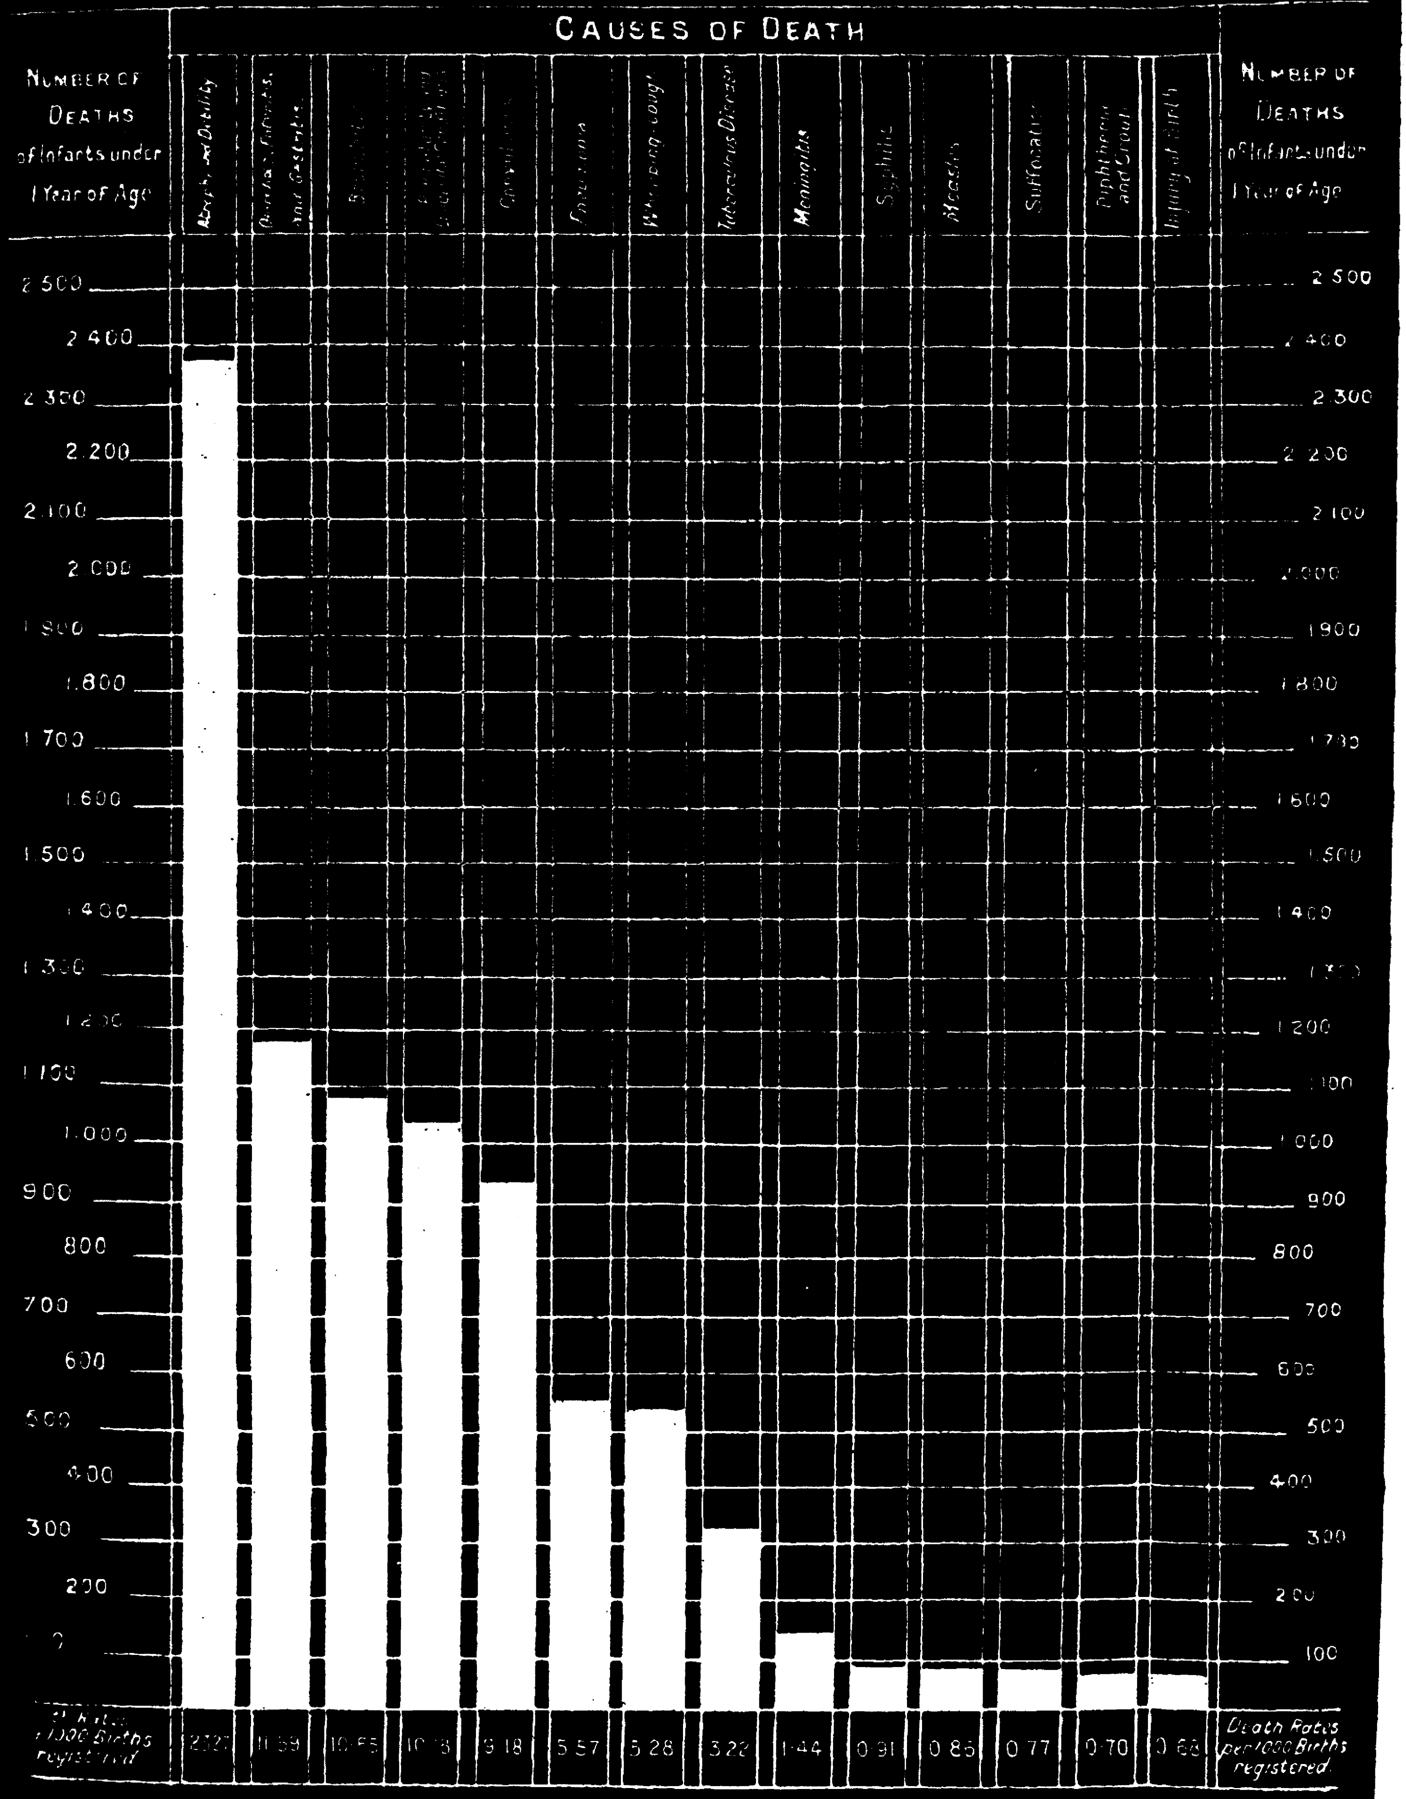
It *appears from the table on page xli., which includes the infant mortality rate for each of the 22 principal urban districts* in Ireland, and which is derived from the Registrar-General's Yearly Summaries of the Weekly Returns, furnished by the Registrars, that the average death-rate of infants in the aggregate was 132 per 1,000 births registered in 1909, that the highest infant mortality rate in 1909 was in *Kilkenny urban district*, namely, 155 per 1,000 births, and the lowest infant death-rate was in Tralee, namely, 70 deaths per 1,000 births registered.

DIAGRAM No. 6.—Showing Infant Mortality for Ireland from Fourteen Principal Causes during the Year 1909.



NOTE.—The diagram may be read thus—According to Irish experience in 1909, to every 1,000 children born alive in that year, there died from Atrophy and Debility 23 infants under 1 year of age; from Diarrhœa, Enteritis, and Gastritis, 12 infants under 1 year of age, and so on for the other causes specified in the diagram.

To face page XI.

TABLE showing for each of the undermentioned Twenty-two Town Districts of Ireland for the 5 Years, 1905-9, the Number of Births registered and the Number of Deaths of Infants under One Year of Age to every 1,000 Births registered and the Death-rate at all Ages per 1,000 of the Population.

[The Deaths are exclusive of those occurring in Public Institutions of persons admitted, and also of Infants whose mothers were admitted from places outside the respective areas, and the rates are based on the numbers so determined.]

OCCUPATIONAL MORTALITY.

In the table on pages xlii. and xliii., as published in the Registrar-General's Yearly Summary of the Weekly Returns, the mortality in 1909 among the several social grades of the population of the Dublin Registration Area is shown.

This table shows that among the families of the Professional and Independent class the annual death-rate from all causes was 16·5 per 1,000 of the population in 1901; among the Middle class, it was also 16·5; among the Artisan class and Petty Shopkeepers, the rate was 16·8; and among the General Service class, it was 23·0 per 1,000.

EMIGRATION.

From the returns collected and forwarded to this Department by the Royal Irish Constabulary and the Metropolitan Police, who acted as enumerators at the several Irish seaports, it appears that the number of emigrants (natives of Ireland) who left the ports of Ireland during the year 1909 was 28,676, of whom 14,916 were males and 13,760 females. Of the whole number, 4,057 were natives of the province of Leinster, 7,690 of Munster, 10,563 of Ulster, and 6,366 of Connaught.

Of the total emigrants from Ireland in 1909, 7·4 per cent. were under 15 years of age, 86·3 per cent. were between 15 and 35 years old, and 6·3 per cent. were 35 years or upwards.

PRICES OF PROVISIONS, AND PAUPERISM.

The average price of the 4 lb. loaf (1st quality, delivered) in Dublin in the year 1909 was 6¼*d.*, the average price in the year 1908 being 6*d.** Oatmeal (1st quality) averaged 14*s.* 4*d.* per cwt. in Dublin, the average price for 1908 being 15*s.*; the average prices of potatoes in Dublin ranged from 2*s.* 8*d.* to 3*s.* 3*d.* per cwt., as against 3*s.* 4*d.* to 3*s.* 10*d.* in 1908; and those of beef from 54*s.* 6*d.* to 59*s.* 6*d.* per cwt., as compared with 51*s.* 6*d.* to 57*s.* in 1908.

TABLE XVII.—AVERAGE PRICES in DUBLIN OF BREAD, OATMEAL, POTATOES, and BEEF, during the years 1899–1909, and the AVERAGE NUMBER OF PERSONS IN IRELAND receiving IN-DOOR and OUT-DOOR RELIEF on Saturdays in those years; also the AVERAGE PRICES of PROVISIONS, and the AVERAGE NUMBER OF PERSONS in RECEIPT OF RELIEF during each quarter of the year 1909.

*Prices derived from returns received from Messrs. Bolands, Limited, and Messrs. Johnston, Mooney and O'Brien, Limited.

†Compiled from Returns furnished by the Local Government Board.

‡Not including those relieved by means of works devised for the relief of distress, viz.:—an average of 3,180 in First Quarter, 13,656 in Second Quarter and 2,048 in Third Quarter of 1905, and an average of 1,062 in First Quarter, 7,199 in Second Quarter, and 2,645 in Third Quarter of 1908.

During the period covered by the foregoing table, *i.e.*, for the year 1909, and the ten years preceding, it is found that in the year 1905 the prices of beef were lowest, when the average ranged from 48*s.* 6*d.* to 54*s.* 6*d.* per cwt.; bread was cheapest in the years 1899, 1900, and 1901, when the average price (1st quality delivered) was 5¼*d.* per 4 lb. loaf. Oatmeal (1st quality) was cheapest in 1901, in which year the average price was 13*s.* 4*d.* per cwt.; and potatoes in 1899, when the average range of prices was from 2*s.* 5*d.* to 3*s.* 5*d.* per cwt. The highest price of bread was in the year 1909, when the 4 lb. loaf averaged 6¼*d.*, and in the year 1908 the price of oatmeal was highest, viz., 15*s.* per cwt. The highest rate for potatoes was from 4*s.* 0*d.* to 4*s.* 6*d.* per cwt. in 1907, and for beef from 55*s.* 6*d.* to 59*s.* 6*d.* per cwt. in 1902.

I have been favoured by the Local Government Board for Ireland with the returns embodied in this Report relating to Pauperism in Ireland, for which I desire to express my obligations. It would appear from these returns (see Table XVII.) that the average number of workhouse inmates in Ireland on Saturdays during the year 1909 was 42,875, being 2,045 below the average for the preceding year; and that the average number of persons receiving out-door relief was 55,705, or 1,165 below the corresponding number for 1908.

THE WEATHER.

The following particulars and those given on pages 155–174 are presented, as heretofore, through the kind permission of the Editors of the "Dublin Journal of Medical Science." These particulars have been extracted from returns of Meteorological Observations taken in the City of Dublin by Sir John W. Moore, M.A., M.D., D.P.H., DUB.; D.SC., OXON.; F.R.C.P.I., F.R.MET. SOC.; and published in the Journal during the years 1909-1910. The tables on pages 175-177 are also founded on Sir John Moore's observations.

The mean Atmospherical Pressure has been obtained from daily readings of the barometer at 9 A.M. and 9 P.M., corrected and reduced to 32° Fahrenheit at the mean sea level. The Mean Temperature values have been deduced from the daily maximal and minimal readings of the thermometer in the shade. The Rainfall is that measured daily at 9 A.M. A *rainy day* is one on which at least ·01 inch of rain falls within the twenty-four hours from 9 A.M. to 9 A.M.

The *Mean Height of the Barometer* during the year 1909 was 29·917 inches. The highest observed reading was 30·656 inches at 9 P.M. on February 13th. The lowest observed reading was 28·387 inches, at 9 P.M. on December 2nd. The extreme range of atmospherical pressure was 2·269 inches, as compared with 2·066 inches in 1908.

The *Mean Temperature* of the air for the year was 49·3°. The highest reading was 77·1° on August 12th, and the lowest reading was 19·5° on December 21st. The average mean temperature for the years, 1889–1908, was 50·0°. The mean temperature deduced from the daily readings of the dry bulb thermometer at 9 A.M. and 9 P.M. was 48·5°.

Rain fell on 193 days, including snow or sleet on 20 days and hail on 30 days. The average annual number of rainy days in the years, 1889–1908, was 198·1. The total rainfall measured 26·939 inches, compared with an average of 27·136 inches in the twenty years, 1889–1908. During the first half of 1909 (January to June, inclusive) the rainfall was 12·061 inches on 84 days; during the second half (July to December, inclusive) 14·878 inches fell on 109 days.

As regards the *Direction of the Wind*, 730 observations were made during the year, with this result—N., 55; N.E., 59; E., 68; S.E., 50; S., 47; S.W., 112; W., 194; N.W., 105; Calms, 40.

In conclusion, I desire to express my indebtedness to Dr. Ninian M. Falkiner, Medical Superintendent of Statistics in this Department, for the valuable assistance he has afforded me in the preparation of this Report. He has closely supervised the tabulation of the causes of deaths at all stages, thereby ensuring that the medical classification should be of such accuracy as to render the Statistics of the highest scientific value.

Furthermore, the fact that the Report is able to be presented to Your Excellency at the same early date as it was last year, is to a large extent due to his strenuous exertions in having the various stages of the preparation of each table completed at the earliest possible date.

I have the honour to be,

Your Excellency's faithful Servant,

WILLIAM J. THOMPSON,

Registrar-General.

General Register Office,
Charlemont House,
Dublin, *7th July*, 1910.

ANNUAL ABSTRACTS

OF

MARRIAGES, BIRTHS, AND DEATHS,

1909.

MARRIAGES, BIRTHS, and DEATHS *registered* in the Year 1909.

I.—PROVINCE OF LEINSTER.—MARRIAGES, BIRTHS AND DEATHS, 1909.

SUPERINTENDENT REGISTRARS' DISTRICTS, ARRANGED BY COUNTIES.*

Wherever the minus sign (—) is prefixed to the numbers given in the column headed "Excess of Births over Deaths," it denotes that the births, instead of exceeding the deaths, were, in fact, *less than the deaths* to the extent stated.

SUPERINTENDENT REGISTRARS' DISTRICTS.	AREA in Statute Acres.	Population, 1901.	TOTAL.			BIRTHS				DEATHS.		Excess of Births over Deaths.
			MARRIAGES.	BIRTHS.	DEATHS.	Including Illegitimate Births.		Illegitimate Births.				
						Males.	Females.	Males.	Females.	Males.	Females.

NOTE.—The Registrars' Districts are subdivisions of the Unions or Superintendent Registrars' Districts, and are identical with the Dispensary Districts of the same names, except in a few instances. See note (*), pp. 4-5.

The letter W. denotes that the Registrar's District contains within its limits the Workhouse belonging to the Union or Superintendent Registrar's District.

Wherever the minus sign (—) is prefixed to the numbers given in the column headed "Excess of Births over Deaths," it denotes that the births, instead of exceeding the deaths, were, in fact, *less than the Deaths* to the extent stated.

BIRTHS AND DEATHS Registered in the Year 1909—REGISTRARS' DISTRICTS arranged by COUNTIES and SUPERINTENDENT REGISTRARS' DISTRICTS.—*continued.*

---

* The boundaries of the Registrar's District of Ballaghaderreen were altered as from the 1st July, 1909, by the transfer therefrom of the District Electoral Divisions of Artagh North, Artagh South, and Loughglinn, to form the new Registrar's District of Loughglinn, constituted from that date. The boundaries of the Registrar's Districts of Castleplunket and Castlereagh were altered as from 1st July, 1909, by the transfer of the District Electoral Division of Castlerea from the latter to the former district. The name of Castlereagh District was changed to Ballinlough from the same date, and the name of Castleplunket District subsequently changed to that of Castlereagh. The figures relate to the districts as at present constituted.

NOTE.—This Table has been constructed for the years 1835 to 1841—By adopting the rate of increase between the population of 1831 and 1841 according to the Irish Census Report of 1841.

1842 to 1846—By taking the English average birth-rate of 1 in 31, and death-rate of 1 in 45, and deducting the annual emigration from Ireland according to the returns received from the Emigration Commissioners in England.

1847 to 1851—The English birth-rate, as above, was used, deducting the number of deaths and the number of emigrants in each year, as given in the Irish Census Reports of 1851; an allowance, proportioned to the number of recorded deaths and the number of emigrants being made in each year for the excess of the number thus arrived at for 1851 over the actual population according to the Census of that year.

1852 to 1871—The English birth and death rates, as above, were used, deducting the number of emigrants according to the returns obtained by the Registrar-General for Ireland, and allowing for excess over census numbers for 1861 and 1871 as explained for the last period.

1872 to 1909—By adding the Births registered in each year to the estimated population for the previous year, deducting the deaths and the number of emigrants, and adjusting the results for the years 1872-81, 1882-91, and 1892-1901, to allow for the discrepancy between the number thus arrived at for 1881, 1891, and 1901, respectively, and the population as shown by the Census in each of these years.

AGES of the POPULATION IN IRELAND according to the Census Returns of 1861, 1871, 1881, 1891, and 1901.

Periods.	Sexes.	AGES—YEARS.														Total.
		Under 1.	1 and under 5.	5 and under 10.	10 and under 15.	15 and under 20.	20 and under 25.	25 and under 35.	35 and under 45.	45 and under 55.	55 and under 65.	65 and under 75.	75 and under 85.	85 and under 95.	95 and upwards.

* In 3,838 instances in 1861—2,453 males, and 1,385 females; in 3,769 instances in 1871, viz., 2,176 males, and 1,593 females; in 2,996 instances in 1881, viz., 1,765 males, and 1,231 females; and in 1,786 instances in 1891, viz., 852 males, and 934 females, the age was not stated in the Returns.

METEOROLOGICAL OBSERVATIONS

FOR EACH MONTH OF THE YEAR 1909.

BY SIR JOHN W. MOORE, B.A., M.D., DUBL.; D.SC., OXON.; F.R.C.P.I.; F.R.MET. SOC.

(Extracted from the *Dublin Journal of Medical Science*).

JANUARY.—An open, damp, cloudy month, further characterised by a generally high barometer and a great prevalence of westerly and south-westerly winds. Ireland lay between a remarkably persistent anticyclone poised over Central Europe and an area of low and unsteady atmospheric pressure over Iceland and the adjoining portions of the North Atlantic Ocean. The week ended Saturday, the 9th, was mild, and the barometer stood high. In the second week the weather was rough and unsettled, rain, hail, sleet, or snow falling almost daily, and thunder and lightning being reported from most districts at one time or another. On Tuesday, the 19th, an anticyclone appeared off the S.W. coast of Ireland, and this system, moving gradually across England to the Continent, eventually assumed the form of a zone of high pressure extending from the Baltic to Ireland. An easterly current set in abroad, and carried sharp and continuous frost to England, whereas there was very little freezing weather in Ireland, Scotland, and Norway, over which countries the wind drew into S. or S.W. Dublin experienced moderate cold from the 18th to the end of the month. At 7 a.m. of the 28th the thermometer read 24° at Liverpool, a coastal station, but 46° at Birr Castle, an inland station.

In Dublin the arithmetical mean temperature (42·7°) was above the average (41·7°) by 1·0°; the mean dry-bulb readings at 9 a.m. and 9 p.m. were 41·8°. In the forty-four years ending with 1909, January was coldest in 1881 (M. T. = 33·2°), and warmest in 1898 (M. T. = 47·8). In 1908 the M. T. was 41·5°.

The mean height of the barometer was 30·090 inches, or 0·216 inch above the corrected average value for January—namely, 29·874 inches. The mercury rose to 30·654 inches at 9 a.m. of the 4th, and fell to 28·864 inches at 7 p.m. of the 14th. The observed range of atmospheric pressure was, therefore, 1·790 inches.

The mean temperature deduced from daily readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 41·8°, or 1·0° above the value for January, 1908. Using the formula, *Mean Temp.* = *Min.* + (*Max.*—*Min.*) × ·52, the M. T. becomes 42·8°, compared with a thirty-five years' (1871-1905) average of 41·9°. The *arithmetical mean of the maximal and minimal readings* was 42·7°, compared with a thirty-five years' average of 41·7°. On the 1st and 18th the thermometer in the screen rose to 53·2°—wind, S.W.; on the 16th the temperature fell to 31·7°—wind, W.S.W. The minimum on the grass was 29·2° on the 20th.

The rainfall was 1·264 inches, distributed over 14 days. Of this amount ·223 inch fell on the 10th. The average rainfall for January in the thirty-five years, 1871-1905, inclusive, was 2·210 inches, and the average number of rainy days was 18. The rainfall, therefore, and rainy days were decidedly below the average. The record rainfall for January was, in 1895—namely, 5·711 inches on 24 days. In 1876 only ·406 inch was measured on but 9 days. In 1907 only ·428 inch fell on but 9 days. In 1908 2·055 inches fell on 16 days.

The atmosphere was foggy on the 20th, 21st, 22nd, 23rd and 25th. High winds were noted on 11 days, reaching the force of a gale on 3 days—the 13th, 17th, and 18th. Snow or sleet fell on the 15th and 16th; hail on the 13th, 14th, and 15th. Solar halos were seen on the 7th, 9th, 14th, and 29th; lunar halos on the 7th and 30th, and lunar coronas on the 2nd, 7th, 29th, and 30th. Temperature reached or exceeded 50° in the screen on 8 days; while it fell to 32° in the screen on only one night, compared with 8 nights in 1908, 4 in 1907, 2 in 1906 and in 1905, 3 in 1904, 7 in 1903 and in 1902, 3 in 1901, but 18 in 1895. The minima on the grass were 32° or less on 13 nights, compared with 15 nights in 1908, 16 in 1907, 11 in 1906, 9 in 1905, 11 in 1904, 9 in 1903, 12 in 1902, 11 in 1901, and 29 in 1895. On the 16th the maximal temperature in the screen was 38·4°.

In Dublin the rainfall up to January 31st, 1909, amounted to 1·264 inches on 14 days, compared with 2·055 inches on 16 days in 1908, only ·428 inch on but 9 days in 1907, 4·127 inches on 22 days in 1906, 1·897 inches on 14 days in 1905, 2·535 inches on 19 days in 1904, 3·269 inches on 20 days in 1903, 1·614 inches on 12 days in 1902, 2·672 inches on 17 days in 1901, only ·406 inch on 9 days in 1876; and with a thirty-five years' average (1871-1905) of 2·210 inches on 18 days.

Mr. William J. Good reports that at the Normal Climatological Station in Trinity College, Dublin, the mean height of the barometer was 30·090 inches, the range of atmospheric pressure being from 30·658 inches at 9 a.m. of the 4th to 28·881 inches at 9 p.m. of the 14th. The mean value of the readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 42·3. The arithmetical mean of the daily maximal and minimal temperatures was 43·2°. The screened thermometers rose to 54·0° on the 18th, and fell to 32·0° on the 16th. On the 26th the grass minimum was 23·5.° Rain fell on 11 days to the amount of 1·205 inches, the greatest fall in 24 hours being ·240 inch on the 18th. The duration of bright sunshine, according to the Campbell-Stokes recorder was 35·5 hours, of which 5·2 hours occurred on the 19th, and again on the 27th. The mean daily duration of sunshine was 1·1 hours. The mean temperature of the soil at 9 a.m. at a depth of one foot was 41·7°; at a depth of 4 feet it was 45·1°.

At the Ordnance Survey Office, Phœnix Park, Dublin, rain fell on 15 days to the amount of 1·494 inches, the greatest measurement in 24 hours being ·350 inch on the 18th. The total duration of bright sunshine was 61·6 hours, the largest amount recorded on one day being 7·4 hours on the 19th.

Mr. R. Cathcart Dobbs, J.P., reports a rainfall of ·905 inch on 10 days at Knockdolian, Greystones, Co. Wicklow, the largest measurement in 24 hours being ·160 inch on the 5th.

Dr. Arthur G. Price, writing from Clonsilla, on the Burnaby Estate, Greytsones, Co. Wicklow, reports that the rainfall at that place was ·96 inch on 11 days, compared with 1·63 inches on 15 days in 1908, and only ·550 inch on 9 days in 1907. The greatest fall in 24 hours was ·175 inch on the 11th. The mean temperature of the month was 41·4°. The thermometer rose to 52° on the 3rd, and fell to 30° on the 15th. Frost occurred on 4 days.

At the Royal National Hospital for Consumption for Ireland, Newcastle, Co. Wicklow, Dr. Launcelot T. Burra measured 1·085 inches of rain on 14 days, the maximum in 24 hours being ·236 inch on the 18th. The mean temperature of the air at 9 a.m. and 9 p.m. was 42·4°. The extreme readings of the thermometer in the shade were—highest, 52·7° on the 3rd; lowest, 30·8° on the 16th.

Mr. T. Bateman reports that the rainfall at The Green, Malahide, Co. Dublin, was ·87 inch on 12 days, compared with only ·362 inch on but 6 days in 1907, and 1·495 inches on 14 days in 1908. The greatest fall in 24 hours was ·17 inch on the 18th. The mean shade temperature was 37·3°, the extremes being —highest, 51° on the 18th; lowest, 26° on the 15th.

Dr. Arthur S. Goff reports that the rainfall at Lynton, Dundrum, Co. Dublin, was 1·34 inches on 15 days, the greatest daily measurement being ·25 inch on the 14th. The thermometer in the shade ranged from 52° on the 3rd, 17th, and 18th to 32° on the 16th. The mean shade temperature was 42·5°. Hail showers fell on the 13th and 14th, and snow on the 15th.

Dr. Christopher Joynt, F.R.C.P.I., recorded 1·215 inches of rain on 13 days at 21 Leeson Park, Dublin. The heaviest fall in 24 hours was ·220 inch on the 10th. The same quantity was measured again on the 18th.

Mr. Robert O'B. Furlong, C.B., returns the rainfall at Cloneevin, Killiney, at ·93 inch on 12 days. The maximal fall in 24 hours was ·25 inch on the 5th. The average January rainfall of the 24 years (1885-1908) was 2·310 inches on 16·7 days.

In Cork, Mr. William Miller measured 2·09 inches of rain on 18 days, the greatest rainfall in 24 hours was ·37 inch on the 28th. The rainfall was 2·11 inches in defect of the average for January.

The Rev. Arthur Wilson, M.A., reports that rain fell on 21 days at the Rectory, Dunmanway, Co. Cork, to the amount of 3·47 inches. The heaviest falls were ·57 inch on the 14th, ·53 inch on the 28th, and ·50 inch on the 15th. On the whole, it was a fine month, except from the 13th to the 18th inclusive. Heavy frost prevailed on the 19th and 20th.

FEBRUARY.—A cloudy, but dry, month, with a mean temperature slightly above the average in Dublin, and a small rainfall. An anticyclone lying to the eastward caused a high mean atmospheric pressure and a preponderance of fresh to strong S.S.E. winds. In England the weather was much colder than in Ireland, or even in Scotland; but it became cold in all parts of the British Isles during the closing days of the month. The first week was particularly mild—on Thursday, the 4th, the thermometer in Dublin ranged between 51·1° and 55·2°; and on that day it rose to 58° at Cambridge and to 59° at Killarney. On the other hand, on the morning of Tuesday, the 23rd, the minima in the screen were 23° in London, 21° at Nottingham, 19° at Oxford, and 18° at Bath.

In Dublin the mean temperature (42·7°) was 0·3° above the average (42·4°). The mean dry-bulb readings at 9 a.m. and 9 p.m. were 42·0°. In the forty-five years ending with 1909, February was coldest in 1895 (M. T. = 34·2°), and warmest in 1903 (M. T. = 47·5°). In 1908 the mean temperature was 44·8°.

The mean height of the barometer was 30·130 inches, or 0·275 inch above the average value for February—namely, 29·855 inches. The mercury rose to 30·656 inches at 9 p.m. of the 13th, having fallen to 29·463 inches at 9 p.m. of the 9th. The observed range of atmospheric pressure was, therefore, 1·193 inches.

The mean temperature deduced from daily readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 42·0°, or only 0·2° above the value for January, 1909. Using the formula, *Mean Temp.* = *Min.* + (*Max.*—*Min.*) × ·50, the M. T. is 42·7°, compared with a thirty-five years' (1871-1905) average of 42·4°. On the 4th the thermometer in the screen rose to 55·2°—wind W.S.W.; on the 14th it fell to 28·0° —wind, W.S.W. The minimum on the grass was 25·7° on the 14th.

The rainfall was ·593 inch, distributed over 8 days. The average rainfall for February in the thirty-five years, 1871-1905, inclusive, was 2·010 inches, and the average number of rainy days was 15. The rainfall, therefore, was considerably below the average, and so were the rainy days. In 1883 the rainfall in February was large—3·752 inches on 17 days; in 1879 also 3·706 inches fell on 23 days. On the other hand, in 1891, only ·042 inch was measured on but 2 days. In 1908, 1·372 inches fell on 20 days.

There was more or less fog on the 22nd, 23rd, and 25th. The amount of cloud—67·2 per cent.—was above the average—66 per cent. High winds were noted on 9 days, but reached the force of a gale on the 3rd only. Hail fell on the 10th, 26th, and 28th. Snow or sleet fell on the 12th, 26th, and 28th. Lunar halos were seen on the 2nd and 5th, and a lunar corona on the 6th.

The temperature reached or exceeded 50° in the screen on 8 days, while it fell to 32° on 3 nights, compared with freezing temperatures on as many as 18 nights in 1895. The minima on the grass were 32° or less on 8 nights, compared with every night in 1895. The thermometer never failed to rise to 40° in the screen in the daytime. The highest minimum was 51·1° on the 4th.

In Dublin the rainfall up to February 28th amounted to 1·857 inches on 22 days, compared with 3·427 inches on 36 days in 1908, 1·732 inches on 23 days in 1907, 5·771 inches on 42 days in 1906, 2·647 inches on 26 days in 1905, 5·847 inches on 36 days in 1904, 5·503 inches on 35 days in 1903, 3·362 inches on 22 days in 1902, 3·872 inches on 29 days in 1901, and a thirty-five years' (1871-1905) average of 4·220 inches on 33 days.

At the Normal Climatological Station in Trinity College, Dublin, Mr. William J. Good reports that the mean height of the barometer was 30·135 inches. The range of atmospheric pressure was between 29·465 inches at 9 p.m. of the 9th, and 30·644 inches at 9 p.m. of the 13th. The mean value of the readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 40·9°. The arithmetical mean of the daily maximal and minimal temperatures was 42·4.° The screened thermometers rose to 56·0° on the 4th, and fell to 27·5° on the 14th. On the 13th the grass minimum was 20·0°. Rain fell on 6 days to the amount of ·566 inch, the greatest fall in 24 hours being ·250 inch on the 28th. The duration of bright sunshine, according to the Campbell-Stokes recorder, was 52·5 hours, of which 5·6 hours occurred on the 10th and 5·2 hours on the 20th. The mean daily duration of bright sunshine was 1·9 hours. The mean earth-temperatures were—at 1 ft., 41·5° ; at 4 ft., 43·9°. The one-foot thermometer ranged between 45·6° on the 5th and 39·0° on the 14th. The four-feet thermometer ranged from 44·5° on the 7th and 8th to 43·4° on the 2nd.

The rainfall at Leeson Park, Dublin, is given by Dr. C. Joynt, F.R.C.P.I., as ·560 inch on 8 days, ·290 inch having been measured on the 28th.

At the Ordnance Survey Office, Phœnix Park, the rainfall was ·678 inch on 11 days, the maximal measurement in 24 hours being ·232 inch on the 28th. The total amount of sunshine was 80·1 hours, the greatest daily duration being 7·7 hours on the 19th.

Dr. Arthur S. Goff reports that at Lynton, Dundrum, Co. Dublin, rain fell on 8 days to the amount of ·64 inch, the greatest daily fall being ·21 inch on the 28th. In February, 1901, the rainfall was 1·55 inches on 10 days; in 1902, it was 2·76 inches on 11 days; in 1903, 2·95 inches on 15 days; in 1904, 4·05 inches on 21 days; in 1905, 1·07 inches on 12 days; in 1906, 2·03 inches on 18 days; in 1907, 1·29 inches on 13 days, and in 1908, 1·16 inches on 20 days. The temperature in the shade ranged from 54° on the 4th to 30° on the 14th. The mean temperature in the screen was 42·2°, compared with 39·0° in 1902, 47·1° in 1903, 40·4° in 1904, 43·6° in 1905, 39·6° in 1906, 39·6° in 1907, and 44·9° in 1908. Hail showers fell on the 9th and 11th; sleet and snow on the 27th and 28th.

Mr. Robert O'Brien Furlong, C.B., recorded a rainfall of ·62 inch on 8 days at Cloneevin, Killiney, Co. Dublin. The maximum in 24 hours was ·31 inch on the 28th. The average rainfall for February in the 24 years, 1885-1908, inclusive, was 1·752 inches on 14·2 days. Since January 1, 1909, 1·55 inches of rain have fallen at this station on 20 days. The smallest measurements in February at Cloneevin have been —·03 inch on 2 days in 1891, ·41 inch on 11 days in 1887, and ·46 inch on 7 days in 1895.

Mr. R. Cathcart Dobbs, J.P., reports that at Knockdolian, Greystones, Co. Wicklow, the rainfall was only ·735 inch on 8 days. The heaviest fall in 24 hours was ·140 inch on the 27th.

At Clonsilla, Greystones, Dr. Arthur G. Price recorded only ·55 inch on 6 days, ·15 inch being measured on the 27th. The mean temperature of the month was 42·5°, the extremes being—highest, 54°, on the 3rd; lowest, 26°, on the 13th.

At the Royal National Hospital for Consumption for Ireland, Newcastle, Co. Wicklow, Dr. Launcelot T. Burra measured ·712 inch of rain on 6 days, the largest daily measurement being ·250 inch on the 8th. The mean temperature at the Hospital was 41·7°, the extremes being—highest, 54·1°, on the 4th; lowest, 24·2°, on the 14th. The mean maximum was 46·2°, the mean minimum, 37·2°.

Mr. T. Bateman reports that the rainfall at The Green, Malahide, Co. Dublin, was ·813 inch on 7 days. The greatest fall in 24 hours was ·305 inch on the 28th. The mean shade temperature was 38·0°, the extremes being—highest, 50·0°, on the 2nd; lowest, 22·0°, on the 13th.

The Rev. Arthur Wilson, M.A., returns the rainfall at the Rectory, Dunmanway, Co. Cork, at 4·91 inches on 12 days, the greatest fall in 24 hours being 1·58 inches on the 7th. The rainfall on the 6th, and again on the 21st, was ·89 inch. On the 9th ·55 inch fell; on the 8th, ·42 inch. With the exception of these five days, the month was a very dry one—only ·02 inch being measured in the period from the 11th to the 20th inclusive. And yet the total rainfall exceeded that of any February in the previous 5 years. In the interval from 9 p.m. of the 6th to 9 p.m. of the 7th 2·30 inches were recorded.

In the City of Cork, Mr. William Miller registered 2·35 inches of rain on 11 days, the largest measurement in 24 hours being ·90 inch on the 7th. The rainfall was 1·08 inches below the average. During the first two months of 1909 the rainfall was 4·44 inches, or 3·19 inches below the average. The thermometer in the screen rose to 52° on the 3rd, and fell to 22° on the 14th. The mean temperature was 39·6°, or 2·8° below the average for the month in 25 years.

MARCH.—As in 1908, so in 1909, March proved to be an unsettled, cold, and rainy month—the mean temperature was actually 1·9° Fahrenheit below that of January, and the same amount below that of February. The mean minimum temperature in the screen was only 35·7°, compared with 38·4° in January and 38·6° in February, and the mean minimum temperature on the ground was 33·4°, compared with 34·5° in January and 35·6° in February. The mean maximum temperature was only 45·9°, compared with 46·9° in January and 46·8° in February.

True to the ancient adage, March "came in like a lion," and the first week of "March many weathers" was very wintry in all parts of the British Isles. Snow fell frequently, and in considerable or large amounts in nearly all districts, and sharp frosts were experienced—in fact, in many places it was the coldest week of the winter. In Dublin the deficit in temperature amounted to 8·7°. In the south-east of England the thermometer fell to zero at Marlborough on the 3rd, and in Scotland to 1° at West Linton on the 5th; at the latter station - ·5° was recorded on the grass. The lowest temperatures in Ireland were 14° at Markree Castle and 15° at Cahir, on the 6th. The general condition continued wintry and unsettled in the second week and until the 17th, after which date temperature rose very decidedly. In the fourth week and to the close the weather was very unsettled, with much cloud and frequent falls of rain. Aurora borealis was seen on the evenings of the 19th and 20th.

In Dublin the arithmetical mean temperature (40·8°) was 2·9° below the average (43·7°). The mean dry-bulb readings at 9 a.m. and 9 p.m. were 40·0°. In the forty-five years ending with 1909 March was coldest in 1867 and 1883 (M. T. = 39·0°), and warmest in 1903 (M. T. = 48·1°). In 1908 the M. T. was 42·0°.

The mean height of the barometer was 29·516 inches, or 0·400 inch below the corrected average value for March—namely, 29·916 inches. The mercury rose to 30·195 inches at 9 a.m. of the 12th and fell to 28·879 inches at 3 p.m. of the 18th. The observed range of atmospheric pressure was, therefore, 1·316 inches.

The mean temperature deduced from daily readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 40·0°. Using the formula, *Mean Temp.* = *Min.* + (*Max.*—*Min.*) × ·485 the M. T. becomes 40·6°. The arithmetical mean of the maximal and minimal readings was 40·8°, compared with a thirty-five years' (1871-1905) average of 43·7°. On the 24th the thermometer in the screen rose to 55·3°—wind W.S.W.; on the 4th the temperature fell to 25·8°—wind, W. to N.W. The minimum on the grass was 22·2°, on the 3rd.

The rainfall was 2·693 inches, distributed over 19 days. The average rainfall for March in the thirty-five years 1871-1905, inclusive, was 1·910 inches, and the average number of rain-days was 17·0. The rainfall, there fore, and the rain-days were above the average. In 1867 the rainfall in March was very large—4·972 inches on 22 days. On the other hand, the smallest March rainfall was ·288 inch on 8 days in 1893. In 1908 the rainfall was 2·940 inches on 22 days.

The atmosphere was foggy on the 7th, 22nd, 23rd, 28th, and 29th. High winds were noted on 4 days, reaching the force of a gale on only one day—the 18th. Snow or sleet occurred on the 1st, 2nd, 5th, 6th, 9th, 14th, and 16th; hail fell on the 5th, 8th, 9th, 10th, 11th, 14th, 15th, 16th, and 27th. A solar halo appeared on the 20th and 27th, and a lunar halo on the 4th and 9th. Lightning was seen on the night of the 15th, and thunder was heard on the afternoon of the 27th. There was an aurora on the 20th. Temperature reached or exceeded 50° in the screen on 6 days, compared with 10 days in 1908, 25 in 1907, 17 in 1906, 20 in 1905, 10 in 1904, 18 in 1903, 23 in 1902, and only 6 in 1901. It fell to 32° in the screen on 10 nights. The minima on the grass were 32° or less on 14 nights, compared with 16 nights in 1908, 9 in 1907, 12 in 1906, 8 in 1905, 13 in 1904, 4 in 1903, 5 in 1902, and 11 in 1901.

The rainfall in Dublin during the three months ending March 31st amounted to 4·550 inches on 41 days, compared with 6·367 inches on 58 days in 1908, 3·666 inches on 42 days in 1907, 7·291 inches on 59 days in 1906, 5·378 inches on 46 days in 1905, 7·938 inches on 55 days in 1904, 9·126 inches on 61 days in 1903, 5·114 inches on 43 days in 1902, 5·656 inches on 46 days in 1901, and a thirty-five years' (1871-1905, inclusive) average of 6·130 inches on 50·0 days.

At the Normal Climatological Station in Trinity College, Dublin, the observer, Mr. William J. Good, reports that the mean height of the barometer was 29·515 inches, the highest reading observed being 30·187 inches at 9 a.m. of the 12th, the lowest, 28·940 inches at 9 a.m. of the 18th. The mean temperature was 40·8°, the mean dry-bulb reading at 9 a.m. and 9 p.m. being 40·5°. The screened thermometers rose to 56·0° on the 24th, and fell to 26·0° on the 3rd and 4th. The grass minimum was 14·0° on the 5th. The mean daily maximum was 46·1°; the mean daily minimum 35·4°; and the mean daily minimum on the grass 29·4°. Rain fell on 17 days to the amount of 2·605 inches, ·440 inch being measured on the 28th. The number of hours of bright sunshine registered by the Campbell-Stokes sunshine recorder was 78·5, giving a daily average of 2·5 hours. There were 9·5 hours of bright sunshine on the 21st. The mean temperature of the soil at 9 a.m. at a depth of one foot was 40·7°; at a depth of 4 feet it was 43·0°. During the month the subsoil temperature at 4 feet decreased from 44·0° on the 1st to 42·0° on the 9th, 10th, and 11th, and then increased intermittently to 44·4° on the 31st.

Mr. R. Cathcart Dobbs, J.P., reports that at Knockdolian, Greystones, Co. Wicklow, 4·275 inches of rain fell on 20 days. The maximal fall in 24 hours was ·800 inch on the 5th.

At Clonsilla, Greystones, Mr. A. Victor Price recorded a rainfall of 4·36 inches on 20 days, the maximum in 24 hours being ·94 inch on the 5th—the result of a heavy snowstorm. The mean temperature of the month was 37·3°, the extremes being—lowest, 28°, on the 5th and 16th; highest, 52°, on the 24th. The total rainfall at Clonsilla, Greystones, since January 1, equals 5·87 inches on 37 days.

Dr. L. T. Burra, Resident Medical Officer, reports that the rainfall at the Royal National Hospital for Consumption, Newcastle, Co. Wicklow, was 4·786 inches on 20 days, the maximal fall in 24 hours being ·830 inch on the 28th. The mean air temperature was 39·6°—the extremes being—highest, 53·3° on the 24th; lowest, 25·4° on the 5th.

Mr. T. Bateman returns the rainfall at The Green, Malahide, Co. Dublin, at 2·901 inches on 17 days, compared with 3·473 inches on 24 days in 1905, 1·071 inches on 15 days in 1906, 1·677 inches on 15 days in 1907, and 2·450 inches on 20 days in 1908. The greatest rainfall in 24 hours was ·575 inch on the 28th. The extremes of temperature in the shade were—highest, 51·5°, on the 28th; lowest, 21·0°, on the 2nd. The mean temperature was 37·3°.

Dr. Arthur S. Goff reports that at Lynton, Dundrum, Co. Dublin, rain fell on 22 days to the amount of 3·52 inches, compared with 2·20 inches on 13 days in 1901, 1·98 inches on 18 days in 1902, 4·53 inches on 28 days in 1903, 2·50 inches on 21 days in 1904, 3·31 inches on 28 days in 1905, 1·80 inches on 17 days in 1906, 1·62 inches on 18 days in 1907, and 3·56 inches on 24 days in 1908. The greatest daily rainfall was ·57 inch on the 27th. The temperature in the shade ranged from 54° on the 24th to 25° on the 5th. The mean shade temperature was 40·3°, compared with 41·2° in 1901, 46·4° in 1902, 45·7° in 1903, 41·1° in 1904, 45·0° in 1905, 43·9° in 1906, 46·3° in 1907, and 41·8° in 1908. Since January 1st, 1909, the rainfall at this station amounts to 5·50 inches on 45 days, compared with 6·71 inches on 40 days in the first quarter of 1901, 7·02 inches on 43 days in 1902, 11·36 inches on 62 days in 1903, 10·14 inches on 67 days in 1904, 6·76 inches on 56 days in 1905, 8·67 inches on 56 days in 1906, 3·45 inches on 38 days in 1907, and 7·01 inches on 63 days in 1908.

Dr. C. Joynt, F.R.C.P.I., returns the rainfall at 21 Leeson Park, Dublin, as 2·750 inches on 21 days, ·470 inch being measured on the 18th.

Mr. Robert O'B. Furlong, C.B., reports a rainfall of 3·38 inches on 22 days at Cloneevin, Killiney, the greatest measurement in 24 hours being ·57 inch on the 28th. At this station the average rainfall for March in the 24 years, 1885-1908, inclusive, was 1·948 inches on 17 days. Since January 1, 1909, 4·93 inches have fallen at Cloneevin on 42 days. Snow or sleet fell on 10 days in March—namely, the 1st, 2nd, 5th, 6th, 7th, 10th, 11th, 13th, 15th, and 16th.

Mr. W. Miller registered 3·17 inches of rain at Cork on 20 days. The greatest fall in 24 hours was ·70 inch on the 17th, and again on the 27th. The rainfall was 0·50 inch in excess of the average for March. Only 0·26 inch fell during the first 16 days. The rainfall of the first quarter of 1909 was 7·61 inches, or 2·69 inches less than the average.

The Rev. Arthur Wilson, M.A., writing from Dunmanway Rectory, Co. Cork, states that 4·92 inches of rain fell there on 21 days, 1·17 inches being measured on the 17th, 1·06 inches on the 27th, and ·73 inch on the 23rd.

At the Ordnance Survey Office, Phœnix Park, Dublin, rain fell on 21 days to the total amount of 2·945 inches, the largest measurement being ·620 inch on the 27th. The duration of bright sunshine was 103·8 hours, of which 10·3 hours occurred on the 21st.

APRIL.—April, 1909, may be described as mild, but, above all, characteristically showery, with a remarkable preponderance of winds from southerly points until the last four days, when cold N.W. and N. winds prevailed. The rainfall (4·078 inches) has been exceeded only once in April since the year 1865—namely, in 1877—when the measurement was 4·707 inches on 21 days. The most interesting feature in the month's meteorology was the "high-barometer" rainstorm which visited Ireland and (to a much less extent) Wales on the 2nd and 3rd. At 9 a.m. of Friday, the 2nd, the barometer stood at 30·392 inches in Dublin. From that point it fell slowly to 30·118 inches by 4 p.m. on Saturday, the 3rd. Thence it rose equally slowly to the maximum for the month, 30·435 inches at 9 a.m. of Wednesday, the 7th. At 7 a.m. of the 2nd a sheet of cirrus and cirro-stratus cloud covered the sky in Dublin. The wind gradually freshened until it blew a fresh gale early on the 3rd. Rain set in at 4 p.m. of the 2nd, and fell—with a couple of hours intermission on the afternoon of the 3rd—until 11 a.m. of the 4th, when the downpour finally ceased. The total precipitation in 37 hours was 1·978 inches. This rainstorm apparently resulted from the chilling of a moist Atlantic air current, which spread over Ireland on the 2nd and 3rd, by an indraft of cold air from an anticyclonic system lying at the time over England and the North Sea. The 3rd was a day of almost unclouded sunshine at some English stations. A period of dry anticyclonic weather followed this remarkable rainstorm, cold, foggy nights and sunny days prevailing in Ireland from the 4th to the 10th inclusive. On the 27th there was a relapse into winter, with keen N.W. and N. winds, and frequent hail squalls, and some thunder and lightning.

In Dublin the arithmetical mean temperature (48·6°) was 1·0° above the average (47·6°). The mean dry-bulb readings at 9 a.m. and 9 p.m. were 47·2°. In the forty-five years ending with 1909, April was coldest in 1879 (the cold year) (M. T. = 44·5°), and warmest in 1893 (M. T. = 51·4°). In 1908 the M. T. was 44·7°.

The mean height of the barometer was 29·884 inches, or 0·034 inch above the average value for April—namely, 29·850 inches. The mercury rose to 30·435 inches at 9 a.m. of the 7th, and fell to 29·221 inches at 4 p.m. of the 22nd. The observed range of atmospheric pressure was, therefore, 1·214 inches.

The mean temperature deduced from daily readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 47·2°, or 7·2° above the value for March, 1909. Using the formula, *Mean Temp.* = *Min.* + (*Max.*—*Min.*) × ·476, the value is 48·2°, or 0·9° above the average mean temperature for April, calculated in the same way, in the thirty-five years, 1871-1905, inclusive (47·3°). The arithmetical mean of the maximal and minimal readings was 48·6°, compared with a thirty-five years' (1871-1905, inclusive) average of 47·6°. On the 10th the thermometer in the screen rose to 68·0°—wind, W.S.W.; on the 8th the temperature fell to 34·4°—wind, calm. The minimum on the grass was 30·9° on the 8th.

The rainfall was 4·078 inches, distributed over 22 days. The average rainfall for April in the thirty-five years, 1871-1905, inclusive, was 1·940 inches, and the average number of rainy days was 16. The rainfall, therefore, and also the rain-days, were considerably in excess of the average. In 1877 the rainfall in April was very large—4·707 inches on 21 days. On the other hand, in 1873, only ·498 inch was measured on 8 days. In 1908 2·337 inches fell on 16 days.

Fog was observed on the 6th, 7th, and 8th. High winds were noted on 11 days, but reached the force of a gale only on the 3rd. Hail fell on the 11th and 28th; sleet on the 30th. The temperature rose above 60° in the screen on three days—the 10th, 23rd, and 25th. It failed to reach 50° on the first 5 days. It never fell to 32° in the screen, and on only 2 nights did it fall to or below 32° on the grass. The mean lowest temperature on the grass was 39·0°, compared with 35·4° in 1908, 36·7° in 1907, 33·6° in 1906, 37·3° in 1905, 39·1° in 1904, 37·0° in 1903, 36·8° in 1902, 37·3° in 1901, and only 31·6° in 1887.

The rainfall in Dublin during the four months ending April 30th amounted to 8·628 inches on 63 days, compared with 8·704 inches on 74 days in 1908, 6·288 inches on 64 days in 1907, 9·120 inches on 77 days in 1906, 7·844 inches on 71 days in 1905, 9·056 inches on 74 days in 1904, 10·176 inches on 78 days in 1903, 7·175 inches on 59 days in 1902, 6·520 inches on 58 days in 1901, only 3·203 inches on 46 days in 1891, and a thirty-five years' (1871-1905) average of 8·070 inches on 66 days.

At the Normal Climatological Station in Trinity College, Dublin, the observer, Mr. William J. Good, returns the mean height of the barometer as 29·885 inches, the highest reading observed being 30·432 inches at 9 a.m. of the 7th, the lowest, 29·296 inches at 9 p.m. of the 22nd. The mean temperature was 48·3°, the mean dry-bulb reading at 9 a.m. and 9 p.m. being 47·7°. Rain fell on 21 days to the amount of 3·929 inches, 1·640 inches being measured on the 3rd. The number of hours of bright sunshine registered by the Campbell-Stokes sunshine recorder was 150·8, giving a daily average of 5·0 hours. The corresponding figures for April, 1904, were 168 hours and 5·6 hours; for 1905, 105 hours and 3·5 hours; for 1906, 182·0 hours and 6·1 hours; for 1907, 116·7 hours and 3·9 hours; and for 1908, 138·8 hours and 4·6 hours. The highest temperature in the shade was 70·0° on the 10th, the lowest was 34·8° on the 30th. The lowest temperature on the grass (terrestrial radiation) was 22·3° on the 6th. The mean earth temperatures at 9 a.m. were—at a depth of one foot, 47·1°, at a depth of 4 feet, 46·5°.

Mr. Robert O'B. Furlong, C.B., returns the rainfall at Cloncevin, Killiney, Co. Dublin, at 3·45 inches on 19 days. The largest measurement in 24 hours was ·98 inch on the 3rd. The average rainfall in April at this station in the 24 years, 1885 to 1908, inclusive, was 1·870 inches on 15·2 days. Since January 1, 1909, 8·38 inches have fallen on 61 days. Hail and sleet were observed on the 28th, 29th, and 30th.

Mr. A. Victor Price recorded 4·04 inches of rain on 18 days at Clonsilla, Greystones, the largest measurement in 24 hours being 1·05 inches on the 3rd. The thermometer rose to 70° on the 10th, having fallen to 33° on the 5th. The mean temperature was 47·2°.

Mr. R. Cathcart Dobbs, J.P., reports that at Knockdolian, Greystones, Co. Wicklow, the rainfall amounted to 3·915 inches on 14 days. The heaviest fall in 24 hours was 1·000 inch on the 3rd. The total rainfall in 1909, up to April 30th, was 9·830 inches on 52 days.

Dr. Launcelot T. Burra, Resident Medical Officer at the Royal National Hospital for Consumption, Newcastle, Co. Wicklow, reports that the rainfall at that place was 4·052 inches, the maximal falls in 24 hours being ·92 inch on the 3rd and 15th. The mean temperature of the air was 47·3°, the thermometer in the screen having risen to 69·0° on the 10th and fallen to 33·9° on the 6th.

Dr. Arthur S. Goff reports that the rainfall at Lynton, Dundrum, Co. Dublin, was 4·54 inches on 19 days, compared with 3·14 inches on 20 days in 1908, 2·43 inches on 23 days in 1907, 1·68 inches on 17 days in 1906, 3·14 inches on 24 days in 1905, 1·48 inches on 18 days in 1904, 1·35 inches on 16 days in 1903, 2·63 inches on 16 days in 1902, and 1·19 inches on 12 days in 1901. The greatest daily rainfall was 1·06 inches on the 3rd. The mean shade temperature was 48·2°, compared with 48·3° in 1901, 46·6° in 1902, 45·9° in 1903, 48·9° in 1904, 46·4° in 1905, 45·4° in 1906, 46·4° in 1907, and 44·5° in 1908. The thermometric range was from 35° on the 7th and 8th to 64° on the 10th. Hail fell on the 11th, 14th, 16th, and 29th.

Mr. T. Bateman, of The Green, Malahide, Co. Dublin, returns the rainfall at 3·262 inches on 18 days, compared with 1·803 inches on 12 days in 1908, 2·313 inches on 19 days in 1907, 1·336 inches on 13 days in 1906, and 1·773 inches on 22 days in 1905. The greatest fall in 24 hours was ·805 inch on the 3rd. The shade mean temperature was 45·0°, compared with 42·1 in 1908, 44·0° in 1907, 43·6° in 1906, and 44·8° in 1905, the extremes being—highest, 64° on the 10th; lowest 29° on the 30th.

At 21 Leeson Park, Dublin, Dr. Christopher Joynt, F.R.C.P.I., measured 3·935 inches on 19 days, the largest amount recorded in 24 hours being 1·450 inches on the 3rd

At the Ordnance Survey Office, Phœnix Park, Dublin, rain fell on 21 days to the amount of 3·671 inches, the greatest measurement in 24 hours being 1·300 inches on the 3rd. The total amount of bright sunshine was 173·8 hours, of which 11·7 hours fell on the 9th, the brightest day of the month.

In Cork, according to Mr. W. Miller, the rainfall amounted to 5·67 inches on 19 days, 1·24 inches being measured on the 2nd. Since January 1, 1909, 13·28 inches of rain have fallen in Cork against an average, for the first four months of the year, of 13·04 inches. Thunder and lightning accompanied a downpour of rain and some hail on the 29th.

At the Rectory, Dunmanway, Co. Cork, the Rev. Arthur Wilson, M.A., recorded 8·06 inches of rain on 21 days. The heaviest falls in 24 hours were 1·73 inches on the 2nd, 1·57 inches on the 3rd, ·83 inch on the 15th, and ·80 inch on the 21st. It rained without cessation from 2 p.m. of the 1st to 2 p.m. of the 4th, the measurement for 72 hours being 3·75 inches. From the 5th to the 11th a very fine spell—warm by day with frosts at night. The remainder of the month was showery, with intervals of bright sunshine. The last week was very cold, with sharp night frosts. The rainfall at Dunmanway in the four months ended April 30 amounted to 21·36 inches on 75 days.

MAY.—This month presented two sharply defined types of weather—during the first half the distribution of atmospheric pressure was mainly anticyclonic, the neighbourhood of Iceland being the region of highest barometer. Easterly and northerly winds prevailed, the dryness amounted to a drought, and a large diurnal range of temperature was observed—at Nairn, on the 5th, the thermometer fell 40° in a few hours, from a maximum of 72° to a minimum of 32° during the following night. This was due to the remarkable absence of cloud, which permitted free solar and terrestrial radiation. On the 12th a temporary break in the weather occurred, clouds and showers taking the place of sunshine—hail, sleet, or snow fell in some districts. Winter and summer met in the third week—16th to 22nd—the first three days being cold as in mid-winter, the last four days being in all respects summerlike. On the 24th an unsettled period, with abundant rainfall, set in, the distribution of atmospheric pressure changing to a cyclonic type, which lasted to the close.

In Dublin the arithmetical mean temperature (52·6°) was 0·4° above the average (52·2°). The mean dry-bulb readings at 9 a.m. and 9 p.m. were 52·1°. In the forty-five years ending with 1909, May was coldest in 1869 (M. T. = 48·2°), and warmest in 1893 (M. T. = 56·7°). In 1908 the M. T. was 55·2°.

The mean height of the barometer was 30·057 inches, or 0·068 inch above the corrected average value for May—namely, 29·989 inches. The mercury rose to 30·355 inches at 9 a.m. of the 13th, and fell to 29·224 inches at 9 a.m. of the 26th. The observed range of atmospheric pressure was, therefore, 1·131 inches.

The mean temperature deduced from daily readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 52·1°, or 4·9° above the value for April, 1909—47·2°. Using the formula, *Mean Temp.* = *Min.* + (*Max.* — *Min.*) × ·47, the value is 52·2°, or 0·4° above the average mean temperature for May, calculated in the same way, in the thirty-five years, 1871-1905, inclusive (51·8°). The arithmetical mean of the maximal and minimal readings was 52·6°, compared with a thirty-five years' average of 52·2°. On the 21st the thermometer in the screen rose to 72·7°—wind, S.W.; on the 2nd the temperature fell to 33·1°—wind, calm. The minimum on the grass was 30·0°, also on the 2nd.

The rainfall amounted to 1·470 inches, distributed over 12 days. The average rainfall for May in the thirty-five years, 1871-1905, inclusive, was 1·970 inches, and the average number of rainy days was 15. The rainfall was, therefore, considerably below, while the rainy days were also below, the average. In 1886 the rainfall in May was very large—5·472 inches on 21 days; in 1869, also, 5·414 inches fell on 19 days. On the other hand, in 1895, only ·177 inch was measured on but 3 days. In 1896 the fall was only ·190 inch on 7 days. In 1908, 1·374 inches fell on 21 days.

A solar halo appeared on the 16th, 19th, 22nd, and 24th. A lunar halo was seen on the 2nd, a lunar corona on the 2nd and 29th. High winds were noted on only 2 days, and never attained the force of a gale. Hail fell on the 17th. Aurora borealis was seen on the night of the 14th, and lightning on that of the 31st.

The mean minimal temperature on the grass was 41·9°, compared with 45·2° in 1908, 41·6° in 1907, 41·9° in 1906, 42·5° in 1905, 42·6° in 1904, 44·3° in 1903, 40·3° in 1902, 41·7° in 1901, and 37·6° in 1894. The maximum reached or exceeded 70° on 2 days, but never fell short of 50°. The absolute maximum was 72·7° on the 21st.

The rainfall in Dublin during the five months ended May 31st amounted to 10·098 inches on 75 days, compared with 10·078 inches on 95 days in 1908, 9·499 inches on 81 days in 1907, 11·592 inches on 97 days in 1906, 9·026 inches on 81 days in 1905, 11·741 inches on 92 days in 1904, 12·560 inches on 95 days in 1903, 9·973 inches on 81 days in 1902, 7·724 inches on 67 days in 1901, 5·971 inches on 70 days in 1896, and a thirty-five years' average of 10·040 inches on 81 days.

At the Normal Climatological Station in Trinity College, Dublin, the observer, Mr. Wm. J. Good, returns the mean height of the barometer as 30·060 inches, the highest reading observed being 30·352 inches at 9 a.m. of the 13th, the lowest, 29·230 inches at 9 a.m. of the 26th. The arithmetical mean temperature was 52·4°, the mean dry-bulb reading at 9 a.m. and 9 p.m. being 52·5°. Rain fell on 12 days to the amount of 1·422 inches, ·372 inch being measured on the 17th. The number of hours of bright sunshine registered by the Campbell-Stokes sunshine recorder was 231·5, giving a daily average of 7·5 hours. The corresponding figures for May, 1904, were 192·5 hours and 6·2 hours; for 1905, 215·7 hours and 7·0 hours; for 1906, 132·5 hours and 4·3 hours; for 1907, 173·0 hours and 5·6 hours, and for 1908, 193·9 hours and 6·3 hours respectively. The mean earth-temperature at 9 a.m. was 52·3° at a depth of one foot below the surface, 50·0° at 4 feet. The corresponding values for 1908 were 53·5° and 50·0°. The lowest temperature on the grass (terrestrial radiation) was 25·5° on the 2nd. The highest temperature in the shade was 73·5° on the 21st; the lowest was 34·0 on the 2nd and 15th.

At Knockdolian, Greystones, Co. Wicklow, the rainfall measured by Mr. R. Cathcart Dobbs, J.P., was 2·165 inches distributed over 12 days—·425 inch falling on the 24th, and ·400 inch on the 17th. The total fall since January 1st, 1909, equals 11·995 inches on 64 days, compared with 9·775 inches on 64 days in 1908, 10 62 inches on 69 days in 1907, 11·665 inches on 66 days in 1906, 9·611 inches on 67 days in 1905, 12·027 inches on 84 days in 1904, 15·655 inches on 79 days in 1903, 11·750 inches on 68 days in 1902, and 11·205 inches on 65 days in 1901.

Mr. A. Victor Price measured 1·37 inches of rain on 11 days at Clonsilla, Greystones, Co. Wicklow. The heaviest fall in 24 hours was ·38 inch on the 24th. The mean temperature was 50·6°—highest being 73° on the 21st, lowest 33° on the 15th.

Dr. Arthur S. Goff returns the rainfall at Lynton, Dundrum, Co. Dublin, at ·90 inch on 10 days, compared with 1·75 inches on 20 days in 1908, 3·66 inches on 16 days in 1907, 2·74 inches on 21 days in 1906, 1·42 inches on 11 days in 1905, 2·46 inches on 18 days in 1904, 2·86 inches on 18 days in 1903, 3·26 inches on 22 days in 1902, and 1·09 inches on 10 days in 1901. The greatest daily measurement was ·25 inch on the 24th. There were hail showers on the 14th. The temperature in the shade ranged from 34° on the 2nd to 73° on the 20th and 21st. The mean temperature of the month was 53·6°, compared with 56·2° in 1908, 51·1° in 1907, 51·8° in 1906, 54·5° in 1905, 53·3° in 1904, 53·1° in 1903, 50·5° in 1902, and 52·6° in 1901.

Mr. Robert O'Brien Furlong, C.B., reports that the rainfall at Cloneevin, Killiney, Co. Dublin, was 1·20 inches on 10 days, ·28 inch being measured on the 24th. The average rainfall in May at this station in the 24 years, 1885-1908, inclusive, was 2·136 inches on 13·8 days. Since January 1, 1909, 9·48 inches have fallen on 71 days. Hail showers occurred on the 14th and 17th.

Dr. Launcelot T. Burra reports that the rainfall at the Royal National Hospital for Consumption Newcastle, Co. Wicklow, was 1·15 inches on 10 days, the greatest fall in 24 hours being 0·245 inch on the 30th. The screened thermometers ranged from 69·9° on the 22nd to 32° on the 2nd. The mean temperature at 9 a.m. and 9 p.m. was 51·3°.

Dr. C. Joynt, F.R.C.P.I., returns the rainfall at 21 Leeson Park, Dublin, at 1·230 inches on 11 days, ·375 inch being measured on the 26th.

Mr. T. Bateman returns the rainfall at The Green, Malahide, Co. Dublin, at 1·528 inches on 11 days, compared with 1·427 inches on 17 days in 1908, 3·200 inches on 18 days in 1907, and 3·174 inches on 19 days in 1906. The greatest rainfall in 24 hours was ·425 inch on the 24th. No rain fell during the first 11 days. The extremes of temperature in the shade were—highest, 68°, on the 30th; lowest, 29°, on the 1st. The mean temperature was 49·9°.

Mr. W. Miller registered 1·80 inches of rain at Cork on 12 days. The greatest fall in 24 hours was ·67 inch on the 24th. The rainfall was 0·38 inch in defect of the average for May. The rainfall of the first five months of 1909 was 15·08 inches, or 0·14 inch less than the average.

The Rev. Arthur Wilson, M.A., writing from Dunmanway Rectory, Co. Cork, states that 2·96 inches of rain fell there on 11 days, ·84 inch being measured on the 21th and ·60 inch on the 30th. There was drought from the 3rd to the 16th, inclusive. Severe night frosts on the 2nd and 18th.

At the Ordnance Survey Office, Phœnix Park, Dublin, rain fell on 12 days to the total amount of 1·123 inches, the largest measurement being ·355 inch on the 24th. The duration of bright sunshine was 249·9 hours, ofwhich 13·8 hours occurred on the 7th, 8th, and 9th respectively, and 14·0 hours on the 11th.

JUNE.—A cold month, the depression of temperature being due to a persistence of winds from polar points of the compass. Ireland fared much better than England in the matter of weather, for this island lay well within the limits of an Atlantic anticyclone, which hovered over the ocean during the first three weeks, whereas areas of relatively low atmospheric pressure lying on the English Channel and over France and Germany brought overcast skies and frequent cold rains to the South and South-east of England. In Dublin the only rainfall registered up to the 18th was ·106 inch recorded on the 5th, when this district came for a time within the " sphere of influence " of a baric depression central over the straits of Dover. In the period from the 18th to the 28th the weather in all parts of the United Kingdom was broken, with clouded skies, frequent rain in the form of heavy thunder showers, low temperature—in a word, unseasonable for midsummer. On the 23rd the rainfall at Kingstown, Co. Dublin, was 1·42 inches, while only ·275 inch was recorded at the Ordnance Survey Office, Phœnix Park. This disturbed spell was caused by the sluggish and irregular movements of a large and rather deep atmospheric depression which spread in from the Atlantic on the 20th, and was still recognisable over Germany on the 30th.

In Dublin the arithmetical mean temperature (55·2°) was below the average (57·9°) by 2·7°, the mean dry-bulb readings at 9 a.m. and 9 p.m. were 54·8°. In the forty-five years ending with 1909, June was coldest in 1907 (M. T. = 55·4°), in 1882 (M. T. = 55·8°), and in 1879 (" the cold year ") (M. T. = 55·9°). It was warmest in 1887 (M. T. = 62·3°); in 1896 (M. T. = 61·4°); and in 1899 (M. T. = 61·3°). June, 1909, establishes a record for coldness.

The mean height of the barometer was 30·013 inches, or 0·096 inch above the corrected average value for June—namely, 29·917 inches. The mercury rose to 30·449 inches at 9 p.m. of the 17th, and fell to 29·236 inches at 4 p.m. of the 22nd. The observed range of atmospheric pressure was, therefore, 1·213 inches.

The mean temperature deducted from daily readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 54·8°, or 2·7° above the corresponding M. T. for May, 1909. Using the formula, *Mean Temp. = Min. +(Max.—Min.)* × ·465, the value was 54·7° or 2·7° below the average mean temperature for June, calculated in the same way, in the thirty-five years, 1871-1905, inclusive (57·4). The arithmetical mean of the maximal and minimal readings was 55·2°, compared with a thirty-five years' average of 57·9°. On the 14th the thermometer in the screen rose to 67·1°—wind, E.; on the 7th the temperature fell to 42·1°—wind, N.E. The minimum on the grass was 39·0° on the 7th.

The rainfall amounted to 1·963 inches on 9 days. The average rainfall for June in the thirty-five years, 1871-1905, inclusive, was 1·990 inches, and the average number of rainy days was 15. The rainfall, therefore, and also the rainy days, were below the average—the latter especially so. In 1878 the rainfall in June was very large—5·058 inches on 19 days; in 1879, also, 4·046 inches fell on 24 days. On the other hand, in 1899, only ·100 inch was measured on 6 days. In 1887 the rainfall was only ·252 inch, distributed over 5 days. In 1908, 1·651 inches fell on 12 days.

High winds were noted on only two days—the 6th and the 20th. A solar halo was seen on the 7th and again on the 17th.

The rainfall in Dublin during the six months ending June 30th amounted to 12·061 inches on 84 days, compared with 11·729 inches on 107 days in 1908, 12·336 inches on 108 days in 1907, 12·641 inches on 109 days in 1906, 10·201 inches on 92 days in 1905, 12·817 inches on 102 days in 1904, 15·054 inches on 108 days in 1903, 12·344 inches on 98 days in 1902, 9·352 inches on 80 days in 1901, only 6·741 inches on 67 days in 1887, and a thirty-five years' average of 12·030 inches on 96 days.

At the Normal Climatological Station in Trinity College, Dublin, the observer, Mr. William J. Good, reports that the mean height of the barometer was 30·016 inches, the highest reading observed being 30·441 inches at 9 p.m. of the 17th, the lowest, 29·255 inches at 9 p.m. of the 22nd. The arithmetical mean temperature was 54·8°, the mean dry-bulb reading at 9 a.m. and 9 p.m. being 55·0°. The thermometer rose to 67·2° in the shade on the 18th, and fell to 42·0° on the 7th. The grass minimum was 32·6° on the 7th. Rain fell on 8 days to the amount of 1·914 inches, ·530 inch being measured on the 23rd. The number of hours of bright sunshine registered by the Campbell-Stokes sunshine recorder was 158·7, giving a daily average of 5·3 hours. The corresponding figures for 1905 were 217·6 hours and 7·3 hours; 1906, 210·3 hours and 7·0 hours; 1907, 129·4 hours and 4·3 hours; and 1908, 181·4 hours and 6 hours. The mean earth temperature read at 9 a.m. was 56·7° at a depth of 1 foot below the surface of the ground, 53·8° at a depth of 4 feet.

Mr. R. Cathcart Dobbs, J.P., reports that at Knockdolian, Greytones, Co. Wicklow, the rainfall was 3·350 inches on 8 days, compared with 1·710 inches on 9 days in 1908, 3·470 inches on 23 days in 1907, ·870 inch on 7 days in 1906, 1·500 inches on 10 days in 1905, 2·280 inches on 10 days in 1904, 1·785 inches on 11 days in 1903, and 3·341 inches on 16 days in 1902. The heaviest rainfalls in 24 hours were 1·140 inches on the 21st, and again on the 23rd. The total fall since January 1 has been 15·345 inches on 72 days, compared with 11·485 inches on 73 days in 1908, 14·090 inches on 92 days in 1907, 12·535 inches on 73 days in 1906, 11·111 inches on 77 days in 1905, 14·307 inches on 94 days in 1904, 17·440 inches on 90 days in 1903, 15·091 inches on 84 days in 1902, 13·670 inches on 75 days in 1901, and only 7·356 inches on 61 days in 1896.

At Clonsilla, Greystones, Co. Wicklow, Mr. A. Victor Price measured 2·63 inches of rain on 8 days—97 inch being recorded on the 23rd, and ·92 inch on the 21st. The mean temperature was 53·8°, the extremes being—highest, 67°, on the 18th and 19th; lowest, 42° on the 7th.

Dr. Launcelot T. Burra reports that at the Royal National Hospital for Consumption for Ireland, Newcastle, Co. Wicklow, rain fell on 7 days to the amount of 3·560 inches, the maximal fall in 24 hours being 1·105 inches on the 21st. The mean temperature for the month was 53·1°, the extremes being—highest. 66·6° on the 18th; lowest, 41·7° on the 4th. The June rainfalls in recent years at this station were—1903, 2·004 inches on 12 days; 1904, 2·494 inches on 12 days; 1905, 2·051 inches on 13 days; 1906, ·831 inch on 13 days; 1907, 3·703 inches on 27 days; 1908, 1·761 inches on 10 days.

Dr. Arthur S. Goff returns the rainfall at Lynton, Dundrum, Co. Dublin, at 2·62 inches on 10 days, compared with 1·73 inches on 12 days in 1908, 2·67 inches on 27 days in 1907, 1·26 inches on 15 days in 1906, 1·51 inches on 12 days in 1905, 1·22 inches on 14 days in 1904, 1·54 inches on 12 days in 1903, 3·08 inches on 19 days in 1902, and 1·71 inches on 13 days in 1901. The greatest daily fall was ·63 inch on the 21st, and ·62 inch on the 27th. The mean shade temperature was 56·5°. The thermometric range was from 74° on the 14th to 40° on the 3rd. Thunder and hail showers occurred on the 22nd, thunder and lightning on the 24th.

Mr. R. O'B. Furlong, C.B., supplies the following record of the rainfall at Cloneevin, Killiney:—Rain fell on 9 days to the amount of 2·87 inches, the maximal fall in 24 hours being 1·18 inches on the 23rd. There was an absolute drought from the 6th to the 19th, inclusive. All the rainfall in the month, except ·04 inch on the 5th, occurred between the 20th and the 28th. The total rainfall since January 1, 1909, is 12·45 inches on 80 days. The average rainfall for June at Cloneevin, in the 24 years, 1885-1908, is 1·771 inches on 13·2 days.

Mr. T. Bateman reports that the rainfall at The Green, Malahide, was 2·232 inches on 9 days, compared with 1·335 inches on 15 days in 1908, and 2·872 inches on 23 days in 1907. The heaviest fall in 24 hours was ·775 inch on the 21st. The mean shade temperature was 53·8°, the extremes being—highest, 71° on the 18th; lowest, 41° on the 6th. The M. T. was 58·4° in 1905, 57·4° in 1906, 54·2° in 1907, and 55·9° in 1908.

Dr. C. Joynt returns the rainfall at 21 Leeson Park, Dublin, at 1·795 inches on 9 days, ·510 inch having been recorded on the 23rd.

The Rev. Arthur Wilson, M.A., reports a rainfall of only 1·18 inches on 14 days at the Rectory, Dunmanway, Co. Cork. On the 20th, ·34 inch was measured. This was the driest month observed at Dunmanway within the past 5 years. Distant thunder was heard on the 22nd and 24th. The rainfall for the completed six months of 1909 amounts to 25·50 inches.

Mr. W. Miller returns the rainfall at Cork at 2·27 inches on but 11 days—this amount falling short of the average for June by ·49 inch. The greatest rainfall in 24 hours was ·85 inch on the 21st, when thunder and lightning accompanied torrential rain. The rainfall of the first six months of 1909 in Cork was 17·35 inches, or ·63 inch below the average.

At the Ordnance Survey Office, Phœnix Park, Dublin, rain fell in June on 12 days to the total amount of 1·907 inches, ·590 inch being registered on the 21st. The duration of bright sunshine was 167·7 hours, the most in one day being 13·5 hours on the 14th, and again on the 15th.

JULY.—A cloudy, rainy or showery, cool, and breezy month of N.W. and W. winds. The broken weather which set in about the summer solstice lasted in a more or less marked degree through the greater part of July. In the week ended Saturday, the 17th, however, there were several fair intervals in most parts of the British Isles. and. strangely enough. at Kilkenny and in the Scilly Islands the week was quite rainless. The following week, also, was chiefly fine in the South and East of England. although unsettled and showery in Ireland, Scotland, and the north of England. The broken weather culminated in the closing week of the month—rain fell daily in Dublin, the measurement much exceeding an inch (1·202 inches). During this period two cyclonic systems passed right across the United Kingdom, the northerly winds of the second disturbance causing the thermometer to fall to 40° at Wick, 42° at Birr Castle, and 45° in Dublin on the 28th. It is noteworthy that the month, so broken elsewhere, was "very fine" in the Co. Cork, as will be seen by the rainfall returns from that county which are given below.

In Dublin the arithmetical mean temperature (59·2°) was 1·3° below the average of the 35 years, 1871-1905 (60·5°); the mean dry-bulb readings at 9 a.m. and 9 p.m. were 58·3°. In the forty-five years ending with 1909, July was coldest in 1879 ("the cold year") (M. T. = 57·2°). It was warmest in 1905 (M. T. = 63·8°); and in 1887 (M. T. = 63·7°). In 1908 the M. T. was 61·0°.

The mean height of the barometer was 29·910 inches, or ·005 inch below the corrected average value for July—namely, 29·915 inches. The mercury rose to 30·305 inches at 9 a.m. of the 19th, and fell to 29·315 inches at 9 a.m. of the 25th. The observed range of atmospheric pressure was, therefore, 0·990 inch.

The mean temperature deduced from daily readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 58·3°, or 3·5° above the value for June, 1909. Using the formula, *Mean Temp.* = *Min.* + (*Max.* —*Min.*) × ·465, the value was 58·7°, or 1·4 below the average mean temperature for July, calculated in the same way, in the thirty-five years, 1871-1905, inclusive (60·1°). The arithmetical mean of the maximal and minimal readings was 59·2°, compared with a thirty-five years' average of 60·5°. On the 3rd the thermometer in the screen rose to 73·2°—wind, W.S.W.; on the 28th the temperature fell to 45·1°—wind, N.W. The minimum on the grass was 41·8°, also on the 28th.

The rainfall was 3·316 inches, distributed over 22 days. The average rainfall for July in the thirty-five years, 1871-1905, inclusive, was 2·680 inches, and the average number of rain days was 17. The rainfall, therefore, and also the rain days, were considerably above the average. In 1880 the rainfall in July was very large—6·087 inches on 24 days; in 1896, also, 5·474 inches fell on 18 days. On the other hand, in 1870, only ·539 inch was measured on 8 days; in 1869 the fall was only ·739 inch on 9 days; and in 1868 ·741 inch fell on but 5 days. In 1908, 2·080 inches fell on 13 days.

High winds were noted on 14 days, but never attained the force of a gale (8). Temperature reached or exceeded 70° in the screen on 3 days, compared with 9 days in 1908 and 1907, 10 in 1906, 17 in 1905, 10 in 1904, and 7 in both 1902 and 1903. The thermometer failed to reach 60° on the 25th and 27th. In July, 1887, temperature reached or exceeded 70° in the screen on no fewer than 17 day. In 1888 the maximum for July was 68·7°.

A solar halo was seen on the 1st, 8th, 12th, and 14th. A brief thunderstorm occurred on the 10th, when, also, hail fell.

The rainfall in Dublin during the seven months ending July 31st amounted to 15·377 inches on 106 days, compared with 13·809 inches on 120 days in 1908, 14·358 inches on 127 days in 1907, 13·664 inches on 122 days in 1906, 11·022 inches on 109 days in 1905, 13·905 inches on 117 days in 1904, 19·072 inches on 131 days in 1903, 15·507 inches on 115 days in 1902, 11·432 inches on 93 days in 1901, only 7·935 inches on 80 days in 1887, and a thirty-five years' (1871-1905) average of 14·71 inches on 113 days.

At the Normal Climatological Station in Trinity College, Dublin, the observer, Mr. William J. Good, reports that the mean height of the barometer was 29·912 inches, the range of atmospheric pressure being from 30·311 inches at 9 p.m. of the 19th to 29·320 inches at 9 a.m. of the 25th. The mean value of the readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 59·2°. The arithmetical mean of the daily maximal and minimal temperatures was 59·3°, the mean maximum being 65·7°, and the mean minimum 52·8°. The screened thermometers rose to 74·0° on the 2nd and 3rd, and fell to 45·0° on the 28th. On the 12th the grass minimum was 40·2°. Rain fell on 18 days to the amount of 3·249 inches, the greatest fall in 24 hours being ·470 inch on the 23rd. The duration of bright sunshine, according to the Campbell-Stokes recorder, was 139·8 hours, of which 12·7 hours occurred on the 19th. The mean daily duration was 4·5 hours. In July, 1904, there were 201 hours of bright sunshine, in 1905, 162·2 hours, in 1906, 184·8 hours, in 1907, 178·1 hours, and in 1908, 174·3 hours. The mean sub-soil temperatures at 9 a.m. were—at 1 ft., 59·5°; at 4 ft., 56·3°. The one-foot thermometer ranged between 61·4° on the 3rd and 57·5° on the 28th. The four-foot thermometer ranged from 54·8° on the 1st, to 57·0° on the 23rd and following days, up to and including the 26th.

Dr. Arthur S. Goff reports that at Lynton, Dundrum, County Dublin, the rainfall was 2·74 inches on 19 days. The maximal fall in 24 hours was ·65 inch, measured on the 24th. The mean temperature was 60·7°, the range being from 74° on the 1st to 47° on the 28th. Thunder occurred on the 3rd and 10th. Hail fell on the 10th and 23rd. In July, 1901, 2·65 inches of rain fell at this station on 11 days; in 1902, 4·27 inches on 19 days; in 1903, 3·66 inches on 24 days; in 1904, 1·22 inches on 17 days; in 1905, ·98 inch on 20 days; in 1906, 1·25 inches on 18 days; in 1907, 1·79 inches on 16 days, and in 1908, 2·55 inches on 15 days.

At Cloneevin, Killiney, Co. Dublin, Mr. Robert O'Brien Furlong, C.B., reports that the rainfall was 2·02 inches on 18 days, compared with a twenty-four years' (1885-1908) average of 2·408 inches on 15·2 days. On the 24th the rainfall was ·44 inch. In July, 1908, 2·30 inches fell on 13 days; in 1907, 1·94 inches fell on 18 days; in 1906, ·97 inch on 14 days; in 1905, 1·03 inches on 15 days; in 1904, only ·77 inch on 15 days; in 1903, 3·54 inches on 19 days; in 1902, 3·64 inches on 13 days; in 1901, 2·80 inches on 13 days. Thunder and lightning occurred on the 3rd. Since January 1, 1909. 14·47 inches of rain have fallen on 98 days at this station, compared with 13·54 inches on 95 days in the corresponding 7 months of 1901, 16·90 inches on 111 days in 1902, 17·39 inches on 122 days in 1903, 13·69 inches on 110 days in 1904, 13·59 inches on 104 days in 1905, 12·92 inches on 118 days in 1906, 13·61 inches on 114 days in 1907, and 13·53 inches on 114 days in 1908. The lowest July fall was ·70 inch on 9 days in 1885; the highest, 6·72 inches on 20 days in 1896.

Mr. T. Bateman reports that the rainfall at The Green, Malahide, Co. Dublin, was 3·389 inches on 23 days. The largest daily fall was ·705 inch on the 30th. The mean shade temperature was 58·3°, the extremes being—highest, 74·5° on the 3rd; lowest, 41·5° on the 27th.

At the Ordnance Survey Office, Phœnix Park, rain fell on 19 days to the amount of 2·880 inches, the greatest rainfall in 24 hours being ·425 inch on the 24th, The total duration of bright sunshine was 151·5 hours, the longest daily sunshine being 13·8 hours on the 19th.

Mr. R. Cathcart Dobbs, J.P., reports that the rainfall at Knockdolian, Greystones, Co. Wicklow, was 2·496 inches on 16 days, the maximal daily fall being ·750 inch on the 24th. Since January 1, 1909, the rainfall at that station equals 17·841 inches on 88 days.

Mr. Arthur Victor Price reports that at Clonsilla, Greystones, Co. Wicklow, rain fell on 17 days to the amount of 2·12 inches, the greatest fall in 24 hours being ·69 inch on the 24th. The mean daily temperature was 58·8°. On the 3rd the thermometer rose to 74° in the shade, on the 26th it fell to 45·0°.

Dr. Launcelot T. Burra reports that rain fell at the Royal National Hospital for Consumption for Ireland, Newcastle, Co. Wicklow, on 17 days to the amount of 2·375 inches. The greatest fall in 24 hours was ·660 inch on the 24th. The mean temperature of the month was 58·5°, the thermometer in the screen rising to 73·0° on the 3rd and falling to 45·2° on the 28th.

At Cork Mr. W. Miller registered 0·97 inch of rain on only 7 days, the fall being 1·66 inches short of the average for July. The greatest rainfall in 24 hours was ·28 inch on the 9th. The rainfall was only about one-third of the average, and the least for July since 1901. There were 13 consecutive days without rain before the 22nd. Since January 1, 1909, 18·32 inches of rain have fallen in Cork on 98 days, the measurement being 2·29 inches short of the average for the first seven months of the year.

At the Rectory, Dunmanway, Co. Cork, the Rev. Arthur Wilson, M.A., recorded a rainfall of only 1·61 inches on 18 days. The heaviest falls in 24 hours were—·39 inch on the 31st and ·31 inch on the 9th. At Dunmanway, July was a very fine though cool month. Nearly all the rain which fell was in the early morning or at night. The only precipitation in the daytime, except drizzle or mist, was a steady rainfall from 1 to 5 p.m. of the 9th. On the the 24th also there were frequent showers. July thus retains its position as the driest month of the year at Dunmanway, the average rainfall in five years being 3·15 inches, June coming next with 3·49 inches. The weather was very warm on the 1st, 17th, 18th, 19th, and 31st.

August.—The cool, cloudy, and showery period which succeeded the sunny weather of late spring at the summer solstice passed with July, and the warm, dry weather in the early part of the month was all that could be desired. The hot sunshine was tempered by an easterly sea breeze, which came in along the east coast each day. The 11th, 12th, 14th, and 15th days were very warm. On the 12th temperature at Fitzwilliam Square rose to 77·1°, the highest reading at that station since July, 17th, 1907, when the value was 77·3°. After a fortnight of true summer, the weather became changeable and comparatively cool. Thunderstorms occurred on both the 15th and the 21st. On the latter day the thunder and lightning were accompanied by heavy rain and hail. The rainfall accounted to that day was the largest during the month in Dublin and the southern portions of the county. Although many of the succeeding days were fine, the temperature remained low, and on only one occasion after the 19th—namely, the 28th—did the thermometers exceed the mean maximum temperature of August, 1908 (65·0°). On the last day of the month, the highest reading was 58·2°.

In Dublin the arithmetical mean temperature (60·0°) was above the average (59·7°); the mean of the dry-bulb readings at 9 a.m. and 9 p.m. was 59·0°. In the forty-five years ending with 1909, August was coldest in 1881 (M. T. = 57·0°), and warmest in 1899 (M. T. = 63·4°). In 1906 the M. T. was 63·2°; in 1907 it was 58·8°; and in 1908 it was 59·1°.

The mean height of the barometer was 30·002 inches, or 0·105 inch above the corrected average value for August—namely, 29·897 inches. The mercury rose to 30·330 inches at 9 a.m. of the 11th, and fell to 29·518 inches at 9 a.m. of the 23rd. The observed range of atmospheric pressure was, therefore, 0·812 inch.

The mean temperature deduced from daily readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 59·0°. It was 0·7° above the value for July, 1909. Using the formula, *Mean Temp. = Min. + (Max. —Min.)* × ·47, the mean temperature was 59·6°, or 0·3° above the average mean temperature for August, calculated in the same way in the thirty-five years 1871-1905, inclusive (59·3°). The arithmetical mean of the maximal and minimal readings was 60·0°, compared with a thirty-five years' average of 59·7°. On the 12th, the thermometer in the screen rose to 77·1°—wind, S.W.; on the 30th, the temperature fell to 45·5°—wind, W. The minimum on the grass was 41·9° on the 30th.

The rainfall was 1·300 inches on 13 days. The average rainfall for August in the thirty-five years 1871-1905, inclusive, was 3·24 inches, and the average number of rainy days was 18. The rainfall, therefore, and the rain-days were decidedly below the average. In 1900 the rainfall in August was very large—5·871 inches on 17 days; in 1889, also, 5·747 inches were registered on 22 days. On the other hand, in 1884, only ·777 inch was measured on 8 days. August, 1905, established a record for rainfall in this month in Dublin, for the measurement was 7·019 inches on 22 days, 3·436 inches having fallen on the 25th. In 1908 the rainfall was 3·435 inches on 15 days.

High wind was noted on one day, but it did not attain the force of a gale (8). Temperature reached 70° in the screen on 6 days, compared with 7 days in August, 1901, only one day in both 1902 and 1903, 9 days in 1904, one day in 1905, 17 days in 1906, one day in 1907, and 3 days in 1908. A solar halo was seen on the 17th. Hail fell on the 21st. Thunderstorms occurred on the 15th and 21st.

The rainfall in Dublin during the eight months ending August 31st amounted to 16·677 inches on 119 days, compared with 17·244 inches on 135 days in 1908, 16·588 inches on 146 days in 1907, 15·425 inches on 139 days in 1906, 18·041 inches on 131 days in 1905, 16·808 inches on 135 days in 1904, 21·872 inches on 157 days in 1903, 18·456 inches on 133 days in 1902, 14·384 inches on 106 days in 1901, 9·455 inches on 96 days during the same period in 1887, and a thirty-five years' average (1871-1905) of 17·950 inches on 131 days.

At the Normal Climatological Station in Trinity College, Dublin, Mr. William J. Good reports that the mean height of the barometer was 30·003 inches. The range of atmospheric pressure was between 30·325 inches at 9 a.m. of the 11th and 29·531 inches at 9 a.m. of the 23rd. The mean value of the readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 59·6°. The arithmetical mean of the daily maximal and minimal temperatures was 60·1°. The screened thermometers rose to 78·2° on the 12th, and fell to 47·0° on the 31st. On the 30th the grass minimum was 39·0°. Rain fell on 12 days to the amount of 1·207 inches, the geatest fall in 24 hours being ·390 inch on the 21st. The duration of bright sunshine, according to the Campbell-Stokes recorder, was 157·9 hours, of which 12·3 hours occurred on the 9th. In August, 1904, there were 183·75 hours of bright sunshine; in 1905, 121·9 hours; in 1906, 176·9 hours; in 1907, 151·4 hours; and in 1908, 148·7 hours. The mean earth-temperatures were—at 1 ft., 60·9°; at 4 ft., 58·0°.

According to Mr. Robert O'Brien Furlong, C.B., at Cloneevin, Killiney, Co. Dublin, 0·84 inch of rain fell on 11 days. The maximal fall in 24 hours was 0·25 inch on the 21st. The average rainfall in August of the twenty-four years, 1884-1907, was 3·212 inches on 16·8 days. This is the lowest fall for August recorded at this station, the next lowest rainfall being 1·30 inches on 10 days in 1886. Thunder and lightning occurred on the 21st. Since January 1, 1909, 15·31 inches of rain have fallen at this station on 109 days.

Dr. Christopher Joynt, F.R.C.P.I., returns the rainfall at 21 Leeson Park at 1·315 inches, of which ·410 inch fell on the 21st. The rain days were 13. In July, 3·275 inches were recorded at this station on 20 days. The total fall since January 1 amounts to 16·075 inches.

Dr. Arthur S. Goff reports that at Lynton, Dundrum, County Dublin, the rainfall was 1·16 inches on 14 days. The maximal fall in 24 hours was ·29 inch on the 21st. The corresponding figures for 1901 were 3·11 inches on 16 days; for 1902, 2·73 inches on 18 days; for 1903, 2·78 inches on 25 days; for 1904, ·98 inch on 20 days; for 1905, 9·35 inches on 21 days; for 1906, 1·48 inches on 15 days; for 1907, 2·51 inches on 19 days; and for 1908, 3·73 inches on 17 days. The mean shade temperature was 61·3°, the range being from 78° on the 15th to 47° on the 30th. In August, 1901, the M. T. was 60·5°; in 1902, it was 58·7°; in 1903, 58·6°; in 1904, 60·5°; in 1905, 59·1°; in 1906, 63·6°; in 1907, 59·8°; and in 1908, 60·0°. A thunderstorm was recorded on the 21st.

Mr. T. Bateman reports that the rainfall at The Green, Malahide, Co. Dublin, was 0·736 inch on 12 days; the heaviest fall in 24 hours was ·208 inch on the 22nd. In August, 1908, 2·415 inches fell on 14 days, the greatest fall in 24 hours being 1·260 inches on the 20th. The mean shade temperature was 58·7°, the extremes being—highest, 79·0° on the 14th; lowest, 40·5° on the 29th.

According to Mr. R. Cathcart Dobbs, J.P., at Knockdolian, Greystones, Co. Wicklow, the rainfall for August was 0·825 inch on 7 days, compared with 4·120 inches on 10 days in 1908, 1·950 inches on 17 days in 1907, 1·765 inches on 13 days in 1906, 8·915 inches on 22 days in 1905, 2·875 inches on 20 days in 1904, 2·870 inches on 27 days in 1903, 3·520 inches on 16 days in 1902, and 3·625 inches on 15 days in 1901. The heaviest fall in 24 hours was ·325 inch on the 17th. The total fall since January 1 amounts to 18·666 inches on 95 days, compared with 18·110 inches on 94 days in 1908, 18·565 inches on 122 days in 1907, 15·455 inches on 99 days in 1906, 21·058 inches on 110 days in 1905, 18·577 inches on 129 days in 1904, 23·100 inches on 134 days in 1903, 23·161 inches on 111 days in 1902, and 19·685 inches on 100 days in 1901.

At Clonsilla, Greystones, Co. Wicklow, Mr. A. Victor Price recorded a rainfall of 0·86 inch distributed over 11 days. The greatest measurement in 24 hours was ·29 inch on the 17th. From the 1st to the 16th only ·02 inch fell, ·01 being recorded both on the 1st and the 13th. Since January 1, the rainfall at Clonsilla, Greystones, was 16·89 inches on 102 days. The mean temperature was 58·6°, the highest being 77·5° on the 14th; the lowest, 44·0° on the 29th.

According to Mr. W. Miller, the rainfall in Cork City was 0·25 inch, or 3·25 inches less than the average, and the rain-days were 7. The greatest fall was 0·08 inch on the 17th. The mean temperature of the month was 59·7°, which is the average. The thermometer rose to 79·0° on the 12th and fell to 43·0° on the 28th and 30th. The rainfall for 1909 up to August 31 was 18·57 inches, compared with an average of 24·11 inches.

The Rev. Arthur Wilson, M.A., returns the rainfall at the Rectory, Dunmanway, Co. Cork, at 0·32 inch on 11 days. The largest measurements in 24 hours were ·08 inch on the 29th, ·06 inch on the 24th, and ·04 inch on the 22nd. At Dunmanway the month was very dry and hot. From the 2nd to the 17th inclusive (16 days) no rain fell. The month was the driest for 5 years, and probably the driest since May, 1896, a month of exceptional drought. The average rainfall in August, based on the returns for the last four years, is 5·575 inches.

At the Ordnance Survey Office, Phœnix Park, Dublin, rain fell on 13 days to the amount of 1·363 inches, the largest measurement in 24 hours being ·420 inch on the 21st. The total duration of bright sunshine was 163·8 hours, the longest daily spell being 12·8 hours on the 6th.

SEPTEMBER.—September, 1909, proved to be a quiet, cool month. At the beginning the rainfall was frequent but not heavy. A very dry period set in on the 12th, lasting, with one or two slight interruptions, to the 27th, when a shallow atmospheric depression brought great gloom and heavy downpours of rain to most parts of the United Kingdom. As in past months, the general trend of the various low pressure systems—none of which were very deep—was from N.W. to S.E., and this caused broken weather in England, particularly over the south-eastern counties, whereas conditions were favourable in the South of Ireland, over which district September was the fourth dry month in succession. At the beginning a large and deep depression lying over Scandinavia caused a cold N.W. wind to pass over Great Britain and Ireland, so that during the night of the 1st-2nd the screened thermometer fell to 35° at Nairn, 36° at Donaghadee, 37° at Nottingham, 38° at Spurn Head, and 39° at Dungeness and Oxford. Another noticeable feature of the month was a violent thunderstorm which visited the upper Thames Valley on the 17th—at Oxford the rainfall was 1·02 inches in about an hour, more than ·75 inch being measured in fifteen minutes. At Wisley, Surrey, the rain and melted hail yielded 1·41 inches in the gauge. On Saturday, the 25th, a magnetic storm of exceptional intensity swept over the greater part of the Earth—aurora australis was reported from South Africa and Australia; aurora borealis from Russia, Sweden, the West of Scotland, the Isle of Man, and Anglesea. Elsewhere the display was obscured by clouds.

In Dublin the arithmetical mean temperature (53·8°) was 2·1° below the average (55·9°); the mean dry-bulb readings at 9 a.m. and 9 p.m. were 53·0°. In the forty-five years ending with 1909, September was coldest in 1886 and 1892 (M. T. = 53·0°), and warmest in 1865 (M. T. = 61·4°) and 1898 (M. T. = 60·2°). In 1908 the M. T. was 56·0°.

The mean height of the barometer was 30·061 inches, or 0·151 inch above the corrected average value for September—namely, 29·910 inches. The mercury rose to 30·383 inches at 9 a.m. of the 14th, having fallen to 29·651 inches at 9 p.m. of the 6th. The observed range of atmospheric pressure was, therefore, 0·732 inch.

The mean temperature deduced from daily readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 53·0°, or 6·0° below the value for August, 1909. Using the formula, *Mean Temp. = Min.* + (*Max.* —*Min.*) × ·476, the mean temperature was 53·5°, or 2·2° below the average mean temperature for September, calculated in the same way, in the thirty-five years, 1871-1905, inclusive (55·7°). The arithmetical mean of the maximal and minimal readings was 53·8°, *compared with a thirty-five years' average of* 55·9°. On the 19th the thermometer in the screen rose to 64·5°—wind, W.; on the 9th the temperature fell to 40·7° —wind, W.S.W. The minimum on the grass was 35·9° on the 14th.

The rainfall was 1·816 inches on 15 days. The average rainfall for September in the thirty-five years, 1871-1905, inclusive, was 2·210 inches, and the average number of rainy days was 15. In 1871 the rainfall was very large—4·048 inches on, however, only 13 days; in 1896 no less than 5·073 inches fell on 23 days, establishing a record rainfall for September. On the other hand, in 1865, only ·056 inch was measured on but 3 days. In 1908 2·313 inches fell on 19 days.

High winds were noted on only 3 days, and never attained the force of a gale. Fog was observed on the 17th, 22nd, 23rd, 25th, and 26th.

The rainfall in Dublin during the nine months ending September 30th amounted to 18·493 inches on 134 days, compared with 19·557 inches on 154 days in 1908, 17·140 inches on 153 days in 1907, 16·121 inches on 146 days in 1906, 19·266 inches on 145 days in 1905, 19·147 inches on 152 days in 1904, 25·269 inches on 174 days in 1903, 21·425 inches on 149 days in 1902, 18·070 inches on 124 days in 1901, only 10·968 inches on 112 days in 1887, and a thirty-five years' average of 20·160 inches on 146 days.

At the Normal Climatological Station in Trinity College, Dublin, the observer, Mr. William J. Good, reports that the mean height of the barometer was 30·065 inches. The range of atmospheric pressure was between 30·397 inches at 9 p.m. of the 14th and 29·660 inches at 9 p.m. of the 6th. The mean value of the readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 53·9°. The arithmetical mean of the daily maximal and minimal temperatures was 54·0°. The screened thermometers rose to 67·0° on the 19th, having fallen to 40·0° on the 18th. On the 14th the grass minimum was 32·8°. Rain fell on 14 days to the amount of 1·840 inches, the greatest fall in 24 hours being ·720 inch on the 27th. The duration of bright sunshine, according to the Campbell-Stokes recorder, was 97·1 hours, of which 9·0 hours occurred on the 10th. The mean earth temperatures were—at 1 ft., 55·5°; at 4 ft., 55·9°. The one-foot thermometer ranged from 58·0° on the 4th and 6th to 54·0° on several days. The four-feet thermometer ranged from 57·8° on the 1st to 55·0° on several days at the close of the month.

Mr. Robert O'Brien Furlong, C.B., reports that the rainfall at Clonecevin, Killiney, Co. Dublin, was 1·48 inches on 14 days, the maximum being ·60 inch on the 27th. The average September rainfall at this station in 24 years (1885-1908) was 1·961 inches on 12·9 days. Up to the 30th, from January 1st, 1909, 16·7 inches of rain had fallen on 123 days.

Mr. R. Cathcart Dobbs, J.P., reports that at Knockdolian, Greystones, Co. Wicklow, the rainfall was 1·530 inches on 14 days, compared with 3·600 inches on 21 days in 1908, ·900 inch on 7 days in 1907, ·338 inch on 6 days in 1906, 1·055 inches on 10 days in 1905, 2·880 inches on 12 days in 1904, 3·950 inches on 20 days in 1903, 3·995 inches on 12 days in 1902, and 5·420 inches on 19 days in 1901. The heaviest fall in 24 hours was ·660 inch on the 27th. At Knockdolian the rainfall since January 1st, 1909, has been 20·196 inches on 109 days, compared with 21·710 inches on 115 days in 1908, 19·465 inches on 129 days in 1907, 15·793 inches on 105 days in 1906, 22·113 inches on 120 days in 1905, 21·457 inches on 141 days in 1904, 27·050 inches on 154 days in 1903, 27·156 inches on 123 days in 1902, and 25·105 inches on 119 days in 1901.

At Clonsilla, Greystones, Mr. A. Victor Price recorded a rainfall of 1·29 inches on 14 days. The greatest rainfall in 24 hours was ·60 inch on the 27th. Temperature was highest (67°) on the 18th, 19th, and 23rd, lowest (40°) on the 8th. The mean temperature was 54·3°.

Dr. Launcelot T. Burra reports that at the Royal National Hospital for Consumption, Newcastle, Co. Wicklow, the rainfall was 1·45 inches on 17 days. The maximal daily fall was 0·57 inch, which was recorded on the 27th. The thermometers in the shade rose to 73·0° on the 20th and 21st, and fell to 40·0° on the 16th. The mean temperature of the month was 55·7°.

Dr. Arthur S. Goff returns the rainfall at Lynton, Dundrum, Co. Dublin, at 2·07 inches on 15 days, compared with 5·03 inches on 18 days in 1901, 4·09 inches on 19 days in 1902, 4·33 inches on 21 days in 1903, 2·94 inches on 19 days in 1904, 1·07 inches on 15 days in 1905, ·62 inch on 8 days in 1906, ·67 inch on 8 days in 1907, and 2·90 inches on 8 days in 1908. The greatest daily fall was ·59 inch on the

27th. The mean temperature in the shade was 54·2°, compared with 55·3° in 1903, 56·2° in 1904, 54·9° in 1905, 57·6° in 1906, 58·2° in 1907, and 56·6° in 1908. The screened thermometers rose to 65° on the 19th, and fell to 42° on the 18th. There were hail showers on the 8th.

Mr. T. Bateman reports that the rainfall at The Green, Malahide, Co. Dublin, was 1·386 inches on 15 days, the greatest fall in 24 hours being ·516 inch on the 27th. The mean shade temperature was 52·6°, the extremes being—highest, 66·5° on the 19th; lowest, 37·0° on the 8th. In September, 1907, the rainfall was ·602 inch, on 7 days; in 1908 it was 2·983 inches on 19 days. Up to September 30th the rainfall amounted to 17·117 inches.

At 21 Leeson Park, Dublin, Dr. Christopher Joynt, F.R.C.P.I., registered 1·765 inches of rain on 14 days, the greatest fall in 24 hours being ·620 inch on the 27th.

The Rev. Arthur Wilson, M.A., returns the rainfall at the Rectory, Dunmanway, Co. Cork, at only ·50 inch on, however, 15 days, the heaviest fall in 24 hours being ·10 inch on the 30th. A very fine, bright month, bringing to a close the driest summer on record. The rainfall was chiefly in the form of drizzle. The nights were cold from the 6th to the 16th. Especially warm on the 20th and 25th. Some days were dull and threatening.

Mr. William Miller states that in the City of Cork the rainfall was 1·40 inches on 16 days, or 1·28 inches short of the average for September. The rainfall was greatest on the 30th, when 0·32 inch was measured. In the 9 months ended September 30th the rainfall was 19·97 inches on 121 days, or 6·82 inches, and 17 days less than the average.

The rainfall recorded at the Ordnance Survey Office, Phœnix Park, was 1·876 inches on 15 days, the greatest measurement in 24 hours being ·725 inch on the 27th. The total amount of sunshine at this station was 111·4 hours, the most registered on any one day being 10·2 hours on the 8th.

October.—A warm, rainy, or showery, squally month up to the 24th, thence to the close cold, with scanty rainfall in Ireland, and sharp night frosts from the 28th. The mean temperature in Dublin of the three weeks ended the 23rd was 54·2°; that of the following fourth week ended the 30th was 41·8°. Had it not been for this premature "cold-snap," October, 1909, would have approached October, 1908, in mildness. Until the 16th atmospheric pressure was lowest—often very low—in the Iceland region, and steep baric gradients for S.W. winds extended thence to the British Islands and France. In this way high temperatures, squally S.W. winds, and frequent rain came to prevail along the eastern shores of the Atlantic. After the 16th the centres of the Atlantic depressions came nearer to our shores, and on the 26th a cyclonic system passed south-eastwards from Kerry to Brittany, subsequently north-eastward to the Netherlands, and finally northwards to Norway. This system caused a fresh or strong easterly gale on the east coast of Ireland, followed by cold and sharp frost in this country. In England and along the shores of the English Channel rain fell in immense quantities—the measurement at Broadstairs in the week ended on Saturday the 30th being no less than 6·03 inches, of which amount 5·79 inches fell on 3 days.

In Dublin the arithmetical mean temperature (51·3°) was above the average (49·5°); the mean dry-bulb readings at 9 a.m. and 9 p.m. were 50·2°. In the forty-five years ending with 1909, October was coldest in 1892 (M. T. = 44·8°) and in 1896 (M. T. = 45·0°). It was warmest in 1908 (M. T. = 55·4°) and in 1876 (M. T. = 53·1°).

The mean height of the barometer was 29·688 inches, or 0·152 inch below the corrected average value for October—namely, 29·840 inches. The mercury rose to 30·304 inches at 9 p.m. of the 31st, and fell to 29·062 inches at 8·40 a.m. of the 5th. The observed range of atmospheric pressure was, therefore, 1·242 inches.

The mean temperature deduced from daily readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 50·2°, or 2·8° below the value for September, 1909. The arithmetical mean of the maximal and minimal readings was 51·3°, compared with a thirty-five years' (1871-1905) average of 49·5°. Using the formula, *Mean Temp.* = *Min.* + (*Max.*—*Min.*) × ·485, the mean temperature was 51·1°, or 1·8° above the average mean temperature for October, calculated in the same way, in thirty-five years, 1871-1905, inclusive (49·3°). On the 3rd the thermometer in the screen rose to 66·7°—wind, S.W.; on the 30th the temperature fell to 30·0°—wind, W. The minimum on the grass was 24·0°, also on the 30th.

The rainfall was 2·613 inches, distributed over 24 days. The rainfall was below, while the rainy days were above, the average. The average rainfall for October in the thirty-five years, 1871-1905, inclusive, was 2·870 inches, and the average number of rainy days was 18. In 1880 the rainfall in October was very large—7·358 inches on 15 days. In 1875, also, 7·049 inches fell on 26 days. On the other hand, in 1904, only ·454 inch fell on 11 days, in 1890 only ·639 inch fell on but 11 days; in 1884, only ·834 inch on but 14 days; and in 1868 only ·856 inch on 15 days.

High winds were noted on 15 days, and attained the force of a gale on 3 days—the 14th, 22nd, and 26th. The atmosphere was foggy in Dublin on the 1st. There was a solar halo on the 15th, and lunar halos were seen on the 25th and 27th. Lightning occurred on the 12th, 13th, 23rd, and 29th. Hail fell on the 21st, 24th, and 30th. The aurora borealis was seen on the 18th and 20th.

The rainfall in Dublin during the ten months ending October 31st, 1909, amounted to 21·106 inches on 158 days, compared with 12·366 inches on 123 days during the same period in 1887 (the dry year), 20·466 inches on 145 days in 1901, 24·481 inches on 172 days in 1902, 27·882 inches on 196 days in 1903, 19·601 inches on 163 days in 1904, 20·462 inches on 161 days in 1905, 19·439 inches on 168 days in 1906, 22·261 inches on 182 days in 1907, 20·776 inches on 167 days in 1908, and a thirty-five years' (1871-1905) average of 23·030 inches on 164 days.

Mr. William J. Good reports that at the Normal Climatological Station in Trinity College, Dublin, the mean height of the barometer was 29·692 inches, the range of atmospheric pressure being from 29·064 inches at 9 a.m. of the 5th to 30·300 inches at 9 p.m. of the 31st. The mean value of the readings of the dry-bulb thermometer at 9 a.m and 9 p.m. was 51·1°. The arithmetical mean of the daily maximal and minimal temperatures was 51·7°. The screened thermometers rose to 68·0° on the 3rd, and fell to 29·6° on the 30th. On this latter date the grass minimum was 18·1°. Rain fell on 23 days to the amount of 2·470 inches, the greatest fall in 24 hours being ·500 inch on the 23rd. The duration of bright sunshine, according to the Campbell-Stokes recorder, was 101·8 hours, of which 7·3 hours occurred on the 6th.. The mean daily sunshine was 3·3 hours. The mean temperature of the soil at 9 a.m. at a depth of one foot was 52·2°; at a depth of 4 feet it was 54·0°.

At Cloneevin, Killiney, Co. Dublin, Mr. Robert O'B. Furlong, C.B., returns the rainfall in October at 3·00 inches on 21 days, compared with 2·76 inches on 20 days in 1902, 3·82 inches on 26 days in 1903, only ·29 inch on 12 days in 1904, 1·01 inches on 14 days in 1905, 3·43 inches on 24 days in 1906, 4·98 inches on 28 days in 1907, 2·30 inches on 15 days in 1908, and a twenty-four years' average (1885-1908) of 2·985 inches on 17·2 days. On the 10th ·46 inch fell. Since January 1, 1909, 19·79 inches of rain have fallen at this station on 144 days. A slight fall of snow occurred at 8 a.m. of the 31st.

Mr. T. Bateman reports that the rainfall at The Green, Malahide, Co. Dublin, was 3·06 inches on 22 days, the greatest fall in 24 hours being ·515 inch on the 19th. the mean shade temperature was 48·2°, the extremes being—highest, 64·5° on the 2nd; lowest, 24·5° on the 30th.

Dr. Arthur S. Goff reports that at Lynton, Dundrum, Co. Dublin, rain fell on 25 days to the amount of 3·02 inches, compared with 2·40 inches on 21 days in 1901, 3·45 inches on 24 days in 1902, 3·38 inches on 26 days in 1903, ·42 inch on 9 days in 1904, 1·54 inches on 15 days in 1905, 4·52 inches on 24 days in 1906, 5·40 inches on 30 days in 1907, and 1·77 inches on 15 days in 1908. The greatest measurement in 24 hours was ·68 inch on the 22nd. Hail showers fell on the 30th. The mean temperature in the shade was 51·6°, the range being from 66° on the 3rd to 32° on the 29th, 30th, and 31st. The mean temperature of October was 50·0° in 1901, 50·9° in 1902, 50·8° in 1903, 51·6° in 1904, 47·1° in 1905, 50·7° in 1906, 49·9° in 1907, and 55·0° in 1908.

Dr. Christopher Joynt, F.R.C.P.I., registered 2·720 inches of rain on 23 days at 21 Leeson Park, Dublin, the largest measurement in 24 hours being ·490 inch on the 23rd.

Mr. A. Victor Price recorded 5·19 inches of rain on 22 days at Clonsilla, Greystones, Co. Wicklow, the greatest rainfall in 24 hours being ·70 inch on the 17th. Since January 1 the measurement at this station has been 23·37 inches on 138 days. The mean temperature for October was 49·5°. The shade thermometer rose to 68° on the 2nd and fell to 29° on the 29th.

At Knockdolian, Greystones, Co. Wicklow, Mr. R. Cathcart Dobbs, J.P., measured 4·628 inches of rain on 22 days, the maximal fall in 24 hours being ·833 inch on the 17th. Other heavy daily falls were ·650 inch on the 12th and again on the 22nd. From January 1 to October 31, 1909, the rainfall at Knockdolian amounted to 24·824 inches on 131 days.

Dr. L. T. Burra reports that 5·950 inches of rain fell on 25 days at the Royal National Hospital for Consumption for Ireland, near Newcastle, Co. Wicklow. The maximum in 24 hours was ·820 inch on the 17th. The mean temperature of the month at the Hospital was 50·1°, the extreme readings of the shade thermometer being—highest, 67·8° on the 4th; lowest, 31·0° on the 30th.

Mr. William Miller states that in the City of Cork there were 24 days with rain during the month—total fall, 5·72 inches, which was 2·42 inches over the average. The greatest day's rain was that of the 10th—·65 inch. The rainfall of the past ten months was 25·69 inches, which was 4·40 inches short of the average for the same period. The rainfall of October in Cork exceeded that of the four previous months taken together by ·83 inch.

The Rev. Arthur Wilson, M.A., recorded a rainfall of 10·74 inches on 26 days at the Rectory, Dunmanway, Co. Cork. This was the heaviest fall of any month in the last five years, except December, 1907, when 11·80 inches were recorded. The heaviest falls in 24 hours were 1·70 inches on the 19th, 1·23 inches on the 25th, and ·90 inch on the 6th. The rainfall for the first 10 months of 1909 is 38·67 inches, compared with 43·18 inches in 1905, 43·29 inches in 1906, 42·31 inches in 1907, and 41·63 inches in 1908. Thunder and lightning occurred on the 12th and 20th.

Mr. William Holbrow reports a rainfall of 10·96 inches at Derreen, Kenmare, Co. Kerry, the heaviest falls in 24 hours being 1·36 inches on the 10th, 1·23 inches on the 19th, and 1·12 inches on the 25th. At Derreen only ·64 inch of rain was measured in August, and only ·46 inch in September, so that the rainfall of October was about ten times as great as that of the two previous months taken together.

At the Ordnance Survey Office, Phœnix Park, Dublin, the October rainfall was 3·260 inches on 25 days. The heaviest fall in 24 hours was ·650 inch on the 23rd. The total amount of bright sunshine was 120·2 hours, the daily maximal duration being 8·6 hours on the 6th.

At the Royal Botanic Gardens, Glasnevin, rain fell on 24 days to the amount of 3·07 inches, the greatest daily fall being ·68 inch on the 23rd.

NOVEMBER.—A cold, but generally fine, month, with a deficient rainfall. The cold was very intense at times in the centre of Ireland, in which district also some sharp alternations of cold and warmth occurred —for example, the thermometer at Birr Castle stood at 26° at 8 a.m. of the 1st, but at 50° twenty-four hours later. In the week ended on the 6th temperature differed little from the normal—the 3rd was a very warm day, the thermometer rising to 61° at Roche's Point, Cork, and at Waterford. Temperature was much below the average in the second and third weeks—the deficit in the latter period being 8° over the southern half of Ireland, 8·7° in the N.W. of England, 9·6° in the N. of Scotland, and no less than 11·6° in the E. and W. of Scotland. At Balmoral the thermometer fell to 3° on the 16th, on which day a minimum of 13° was recorded at Markree, Co. Sligo. The lowest grass readings reported were 5° at Crathes, zero at Balmoral, and 8° at Markree Castle. Temperature remained low until Thursday, the 25th, when large and deep depressions began to spread in from the Atlantic, carrying with them warm, moist, S.W. winds. At 7 a.m. of the 29th the barometer was down to 28·42 inches at Reykjavik, in Iceland, whereas it read 30·19 inches at Lyons. A stong S.W. wind swept, in consequence, over the British Isles, and rain fell in most districts.

In Dublin the arithmetical mean temperature (43·0°) was 2·3° below the average (45·3°); the mean dry-bulb readings at 9 a.m. and 9 p.m. were 42·1°. In the forty-five years ending with 1909, November was coldest in 1878 (M. T. = 38·2°), and in 1870 (M. T. = 42·2°); warmest in 1899 (M. T. = 50·7°), and in 1881 (M. T. = 50·3°). In 1908 the M. T. was 48·1°.

The mean height of the barometer was 30·040 inches, or 0·180 inch above the corrected average value for November—namely, 29·860 inches. The mercury rose to 30·503 inches at 9 a.m. of the 24th, and fell to 29·075 inches at 9 p.m. of the 29th. The observed range of atmospheric pressure was, therefore, 1·428 inches.

The mean temperature deduced from daily readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 42·1°, or 8·1° below the value for October, 1909. The arithmetical mean of the maximal and minimal readings was 43·0°, compared with a thirty-five years' (1871-1905) average of 45·3°. On the 3rd the thermometer in the screen rose to 56·8°—wind, W.; on the 16th the temperature fell to 28·2°—wind, N.W. The minimum on the grass was 22·9° on the 16th.

The rainfall was 1·425 inches on 14 days—the rainfall and rain-days were much below the average. The average rainfall for November in the thirty-five years, 1871-1905, inclusive, was 2·720 inches, and the average number of rain-days was 17. In 1888, 6·459 inches fell on 26 days. On the other hand, the rainfall in 1896 was only ·664 inch on 9 days. In 1908 the rainfall was 1·237 inches on 12 days.

High winds were noted on 6 days, but never attained the force of a gale. The atmosphere was more or less foggy in Dublin on the 22nd and 25th. There was an aurora borealis on the 7th. A solar halo was seen on the 1st and again on the 8th. Lunar halos appeared on the 20th, 26th, 27th, and 30th. Lightning was seen on the evenings of the 7th and 10th. Hail fell on the 14th, 15th, and 16th; snow and sleet, on the 14th and 15th.

The rainfall in Dublin during the eleven months ending November 30th amounted to 22·531 inches on 172 days, compared with 15·378 inches on 141 days during the same period in 1887, 24·086 inches on 156 days in 1901, 27·812 inches on 190 days in 1902, 30·015 inches on 212 days in 1903, 20·678 inches on 172 days in 1904, 24·013 inches on 180 days in 1905, 21·001 inches on 185 days in 1906, 24·845 inches on 196 days in 1907, 22·013 inches on 179 days in 1908, and a thirty-five years' average of 25·750 inches on 181 days.

At the Normal Climatological Station in Trinity College, Dublin, Mr. William J. Good, reports that the mean height of the barometer was 30·041 inches, the range of atmospheric pressure being from 30·507 inches at 9 a.m. of the 24th to 29·074 inches at 9 p.m. of the 29th. The mean value of the readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 42·8°. The arithmetical mean of the daily maximal and minimal temperatures was 43·5°. The screened thermometers rose to 57·6° on the 3rd, and fell to 28·8° on the 16th. On the 16th also the grass minimum was 20·1°. Rain fell on 10 days to the amount of 1·302 inches, the greatest fall in 24 hours being ·680 inch on the 13th. The duration of bright sunshine, according to the Campbell-Stokes recorder, was 61·4 hours, of which 5·7 hours occurred on the 7th. The mean daily sunshine was 2·0 hours. The mean temperature of the soil at 9 a.m. was 43·5° at a depth of 1 foot; at a depth of 4 feet it was 48·0°.

At Cloneevin, Killiney, Co. Dublin, Mr. Robert O'B. Furlong, C.B., states that 1·20 inches of rain fell on 10 days, compared with a twenty-four years' (1885-1908) average of 2·880 inches on 16 days. The maximal fall in 24 hours was ·71 inch on the 13th. Since January 1, 1909, 20·99 inches of rain have fallen at this station on 154 days. The corresponding figures for 1901 were 26·10 inches on 161 days; 1902, 30·18 inches on 178 days; 1903, 30·05 inches on 203 days; 1904, 20·39 inches on 166 days; 1905, 25·95 inches on 167 days; 1906, 20·22 inches on 183 days; 1907, 23·71 inches on 182 days; and 1908, 23·30 inches on 176 days.

Mr. R. Cathcart Dobbs, J.P., reports that at Knockdolian, Greystones, Co. Wicklow, the rainfall was 1·920 inches on 11 days. Of the total quantity 1·160 inches fell on the 13th.

At Clonsilla, Greystones, Co. Wicklow, Dr. Arthur G. Price measured 1·76 inches of rain on 10 days, the heaviest fall in 24 hours being 1·03 inches on the 13th. The mean temperature was 44·0°, the maximum being 61° on the 2nd, and the minimum 28° on the 23rd.

Dr. Launcelot T. Burra reports a rainfall of 1·91 inches on 12 days at the Royal National Hospital for Consumption for Ireland, Newcastle, Co. Wicklow. The greatest fall in 24 hours was ·95 inch on the 13th. The mean temperature for the month was 43·3°, the maximum being 62·0° on the 3rd, and the minimum 29·0° on the 24th. The mean dry-bulb reading at 9 a.m. and 9 p.m. was 44·1°.

Dr. Arthur S. Goff reports that at Lynton, Dundrum, Co. Dublin, rain fell on 16 days to the amount of 1·46 inches, the greatest measurement in 24 hours being ·66 inch on the 13th. In November, 1901, the rainfall was 3·53 inches on 8 days; in 1902, it was 4·61 inches on 17 days; in 1903, 1·93 inches on 14 days; in 1904, 1·26 inches on 11 days; in 1905, 4·35 inches on 22 days; in 1906, 1·60 inches on 15 days; in 1907, 3·10 inches on 19 days; and in 1908, 1·56 inches on 16 days. The mean temperature in the shade was 42·2°, the range being from 56° on the 4th and 5th to 26° on the 16th.

Dr. Christopher Joynt, F.R.C.P.I., registered 1·390 inches on 15 days at Leeson Park, Dublin. The maximum in 24 hours was ·640 inch on the 13th. In November, 1905, 3·795 inches of rain had been recorded at this station; in 1906, 1·485 inches; in 1907, 2·810 inches; and in 1908, 1·315 inches.

Mr. T. Bateman reports that the rainfall at The Green, Malahide, Co. Dublin, was 1·155 inches on 10 days—the greatest fall in 24 hours being ·565 inch on the 13th. The mean shade temperature was 38·9°, the extremes being—highest, 53° on the 2nd; lowest, 22·5° on the 22nd.

In the City of Cork Mr. William Miller returns the rainfall at 0·76 inch, or 3·12 inches less than the average for November. There were only 9 rain-days. The heaviest fall in 24 hours was ·35 inch on the 30th. Up to November 30th, the rainfall of 1909 amounted to 26·45 inches—that is, 7·52 inches less than the average for the first eleven months of the year.

At Dunmanway Rectory, Co. Cork, the Rev. Arthur Wilson, M.A., registered a rainfall of 1·80 inches on 12 days, the heaviest fall in 24 hours being ·47 inch on the 30th. An unusually bright, fine month, with very cold nights and mornings. Only ·25 inch of rain fell up to the 25th, and there was a drought from the 13th to that date. Thunder was heard on the 27th.

Mr. William Holbrow reports a rainfall of 2·03 inches on 8 days at Derreen, Kenmare, Co. Kerry. The heaviest fall in 24 hours was ·78 inch on the 26th. Hard frost prevailed from the 11th to the 24th, the minimum being 11° on the 23rd.

At the Ordnance Survey Office, Phœnix Park, Dublin, rain fell on 16 days to the amount of 1·488 inches, the largest measurement in 24 hours being ·700 inch on the 13th. The total amount of sunshine was 89·6 hours, the most in one day being 7·2 hours on the 6th.

DECEMBER.—A cold, wet month, with snowstorms on the night of the 5th, 6th, and the forenoon of the 19th. There had not been such a large rainfall in December in Dublin since 1876, when, however, 7·566 inches fell, compared with 4·408 inches in the present month. As regards temperature, December, 1909, was a month of extremes—from the 3rd to the 8th inclusive, the screened thermometer never rose to 40°, and snow lay in the city on the 6th, 7th, and 8th. On the 9th a fresh S.W. wind sent the thermometer up to 53·2° and next day the maximum for the month—56·3°—was reached. An anticyclonic easterly wind prevailed from the 11th to the 17th, and temperature became gradually lower. On the night of the 18th a heavy fall of rain, snow, and hail occurred, and this was followed by a snowstorm on the forenoon of the 19th, after which keen frost set in. On the 20th the thermometer did not rise higher than 31·2° in Dublin, and during the succeeding night the minimum was 19·5° in the screen and 16·2° on the snow. At 1 p.m. of the 21st a rapid thaw set in, rain and sleet falling subsequently to the amount of almost an inch (·969 inch). On Christmas night a mild spell set in, which lasted to the close of the month, with a brief interruption on the forenoon of the 29th, when a calm and fog prevailed. A fine lunar rainbow appeared at 11 p.m. of the 30th.

In Dublin the arithmetical mean temperature (41·4°) was 0·6° below the average (42·0°); the mean dry-bulb readings at 9 a.m. and 9 p.m. were 40·9°. In the forty-five years ending with 1909, December was coldest in 1878 (M. T. = 32·8°), and in 1874 (M. T. = 36·8°); warmest in 1898 (M. T. = 47·6°), and in 1900 and 1905 (M. T. = 47·1°).

The mean height of the barometer was 29·613 inches, or 0·262 inch below the corrected average value for December, namely, 29·875 inches. The mercury rose to 30·477 inches at 9 p.m. of the 14th, having fallen to 28·387 inches at 9 p.m. of the 2nd. The observed range of atmospheric pressure was, therefore, 2·090 inches.

The mean temperature deduced from daily readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 40·9°, or 1·2° below the value for November, 1909. Using the formula *Mean Temp. = Min. + Max.—Min.* × ·52, the value was 41·5°, or 0·6° below the average mean temperature for December, calculated in the same way, in the thirty-five years, 1871-1905, inclusive (42·1°). The arithmetical mean of the maximal and minimal readings was 41·4°, compared with a thirty-five years' average of 42·0°. On the 10th the thermometer in the screen rose to 56·3°—wind, S.W.; on the 21st the temperature fell to 19·5°—wind, calm. The minimum on the grass was 16·2° on the 21st. There were 8 days of frost in the screen, and 13 nights of frost on the grass were recorded.

The rainfall was 4·408 inches, distributed over 21 days. The average rainfall for December in the thirty-five years, 1871-1905, was 2·250 inches, and the average number of rainy days was 17. The rainfall, therefore, was nearly double, while the rainy days were considerably in excess of the average. In 1876 the rainfall in December was very large—7·566 inches on 22 days. In 1868 (which was otherwise a fine and dry year), 4·749 inches fell on as many as 27 days. On the other hand, in 1867, only ·771 inch was measured on 13 days; in 1885, only ·742 inch on 10 days; in 1892, only ·795 inch on 10 days; and in 1871, only ·797 inch on 15 days.

High winds were noted on 13 days, and attained the force of a gale on three occasions—the 3rd, 21st, and 28th. The atmosphere was more or less foggy in Dublin on the 4th, 5th, 7th, 8th, 21st, 22nd, and 29th. Hail fell on the 2nd, 3rd, 6th, and 19th; snow or sleet on the 3rd, 5th, 6th, 19th, and 21st. A lunar halo was seen on the 1st, 22nd, and 31st; a lunar corona on the 12th, and a lunar rainbow on the 30th.

The rainfall in Dublin during 1909 amounted to 26·939 inches on 193 days, compared with 23·753 inches on 198 days in 1908, 26·994 inches on 218 days in 1907, 22·807 inches on 203 days in 1906, 25·277 inches on 193 days in 1905, 22·180 inches on 189 days in 1904, 31·601 inches on 228 days in 1903, 29·375 inches on 203 days in 1902, 26·075 inches on 179 days in 1901, only 16·601 inches on 160 days in 1887, and a thirty-five years' (1871-1905) average of 28·000 inches on 198 days.

At the Normal Climatological Station in Trinity College, Dublin, Mr. William J. Good reports that the mean height of the barometer was 29·615 inches, the range of atmospheric pressure being from 30·482 inches at 9 p.m. of the 14th to 28·390 inches at 9 p.m. of the 2nd. The mean value of the readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 41·4°. The arithmetical mean of the daily maximal and minimal temperatures was 41·7°. The screened thermometers rose to 57·0° on the 10th and again on the 28th, and fell to 16·5° on the 21st. On the 21st, also, the grass minimum was 10·1°. Rain fell on 20 days to the amount of 4·200 inches, the greatest fall in 24 hours being ·990 inch on the 5th. On the 21st ·940 inch was recorded. The duration of bright sunshine, according to the Campbell-Stokes recorder, was only 21·8 hours, of which 2·8 hours occurred on the 8th and also on the 24th. The mean daily sunshine was only 0·7 hour. The mean temperature of the soil at 9 a.m. was 40·9° at a depth of 1 foot; at a depth of 4 feet it was 44·4°.

Mr. R. Cathcart Dobbs, J.P., reports that at Knockdolian, Greystones, Co. Wicklow, the rainfall in December was 6·260 inches on 18 days, Of the total amount 1·500 inches fell on the 1st, 1·300 inches on the 5th, and 1·130 inches on the 21st. From January 1st to December 31st, 1909, rain fell at Knockdolian on 160 days, to the total amount of 33·004 inches.

Dr. Stewart Ross reports a rainfall of 6·270 inches on 20 days at Clonsilla, Greystones, Co. Wicklow, the heaviest fall in 24 hours being 1·5 inch on the 1st. The mean temperature of December was 39·95°, the extremes being—highest, 53° on the 11th, lowest, 22° on the 21st. The rainfall during 1909 at Clonsilla amounted to 32·455 inches on 159 days. The greatest daily measurement was 1·5 inches on the 1st December.

Dr. Launcelot T. Burra reports a rainfall of 5·805 inches on 19 days at the Royal National Hospital for Consumption for Ireland, Newcastle, Co. Wicklow, the maximal fall in one day being 1·250 inches on the 5th. The mean temperature of the month was 40·9° (mean max., 45·7°, mean min., 36·1°), and the extremes were—highest, 53·4° on the 28th; lowest, 23·0° on the 21st. The mean dry bulb thermometer reading at 9 a.m. and 9 p.m. was 41·3°.

Mr. T. Bateman reports that the rainfall at the Green, Malahide, Co. Dublin, was 3·915 inches on 17 days, the greatest fall in 24 hours was ·865 inch on the 5th. The mean shade temperature was 36·0°, the extremes being—highest, 53° on the 10th; lowest, 14° on the 20th.

Dr. Christopher Joynt, F.R.C.P.I., recorded a rainfall of 4·740 inches on 21 days at 21 Leeson Park, Dublin. On the 5th, 1·160 inches were recorded, and on the 21st the measurement was 1·050 inches. The total rainfall for the year was 27·290 inches.

Mr. Robert O'B. Furlong, C.B., returns the rainfall at Cloneevin, Killiney, at 4·37 inches on 20 days. The maximal fall in 24 hours was 1·40 inches on the 5th. The average December rainfall for the 24 years (1885-1908) was 2·342 inches on 17·6 days. Snow fell on the 5th, 18th, and 19th. Since January 1, 1909, 25·36 inches of rain have fallen at this station on 174 days, compared with 25·66 inches on 196 days in 1908.

Dr. Arthur S. Goff reports that at Lynton, Dundrum, Co. Dublin, rain fell on 21 days to the amount of 4·04 inches, 1·24 inches being measured on the 5th. Temperature ranged from 55·0° on the 9th, 10th, and 27th to 20° on the 21st. The mean shade temperature was 40·9° Fahrenheit. Heavy falls of snow occurred on the 5th and 18th. Hail and sleet showers fell on the 6th.

At Cork, according to Mr. W. Miller, the December rainfall was 3·49 inches on 16 days, the measurement being 0·74 inch less than the average. The greatest daily rainfall was 1·47 inches on the 21st. The year's rainfall at this station was 29·94 inches on 170 days, the total being 8·06 inches under the average, while the rainy days were 37 in defect.

The Rev. Arthur Wilson, M.A., reports that rain fell on 26 days at the Rectory, Dunmanway, Co. Cork, to the amount of 7·41 inches. The heaviest falls were 1·90 inches on the 21st and 1·27 inches on the 9th. A cold month, with some very wet days and frequent frosts. Some snow on the 7th and 18th. The rainfall for the year was 47·88 inches.

Mr. W. Holbrow returns the rainfall at Derreen, Kenmare, Co., Kerry, at 6·82 inches on 22 days. The maximum in 24 hours was 1·03 inches on the 21st. Frost occurred on 6 nights, the thermometer falling to 12° on 2 nights. The total rainfall in 1909 at Derreen was 55·61 inches on 180 days. In August and September only 1·10 inches fell on only 14 out of 61 days, whereas in October alone the measurement was 10·96 inches on 25 days.

The rainfall at the Ordnance Survey Office, Phœnix Park, Dublin, was 3·735 inches on 23 days, the maximum in 24 hours being ·600 inch on the 5th. The total amount of sunshine was 37·2 hours, the largest daily amount was 4·7 hours on the 24th. The thermometer fell to 8·8° in the screen on the early morning of the 21st.

RAINFALL IN 1909.

At 40 Fitzwilliam Square, West, Dublin.

Rain Guage :—Diameter of Funnel, 8 *in. Height of top—Above ground,* 1 *ft.* 4 *in : above sea level,* 50 *ft.*

The rainfall was 26·939 inches, or 1·061 inches less than the average annual measurement of the thirty-five years, 1871-1905, inclusive—viz., 28·000 inches.

It is to be remembered that the rainfall in 1887 was very exceptionally small—16·601 inches. In 1870 only 20·859 inches fell; in 1884 the measurement was 20·467 inches; in 1883 it was 20·493 inches.

The scanty rainfall in 1887 was in marked contrast to the abundant downpour in 1886, when 32·966 inches—or as nearly as possible double the fall of 1887—fell on 220 days. In 1900 the rainfall was 34·338 inches, or 6·338 inches in excess of the average for the thirty-five years, 1871-1905. Only twice since these records commenced has the rainfall in Dublin exceeded that of 1900—namely, in 1872, when 35·566 inches fell on 238 days, and in 1880, when 34·512 inches were measured on, however, only 188 days. In 1908 the rainfall was 23·753 inches on 198 days.

In 1909 there were 193 " rain-days " or days upon which not less than ·005 inch of rain (five-thousandths of an inch) was measured. This was 5 under the average number of rain-days, which was 198 in the thirty-five years, 1871-1905, inclusive. In 1868 and 1887—the warm, dry years of recent times—the rain-days were only 160, and in 1870 they were only 145.

On two occasions in 1909 did one inch of rain fall on a given day in Dublin—viz., April 3rd, 1·581 inches, and December 5th, 1·029 inches. In 1901, the rainfall only once exceeded one inch, but on that occasion (November 11th) the measurement was 2·037 inches. In 1902 1·342 inches fell on July 25th, and 2·075 inches on September 2nd. In 1903 the maximal daily rainfall was ·966 inch on September 10th. In 1904 1·092 inches fell on May 31st, and 1·197 inches on September 12th. The excessive rainfall on August 25th, 1905, is especially noteworthy—it amounted to 3·436 inches in Dublin (Fitzwilliam Square). It was the ninth occasion only since 1865—that is, in 45 years inclusive—upon which 2 inches have been measured in Dublin at 9 a.m. as the product of the preceding 24 hours' precipitation. The previous excessive falls were—August 13th, 1874 (2·482 inches); October 27th, 1880 (2·736 inches); May 28th 1892, (2·056 inches); July 24th, 1896 (2·020 inches); August 5th, 1899 (2·227 inches); August 2nd, 1900 (2·135 inches); November 11th, 1901 (2·037 inches); and September 2nd, 1902 (2·075 inches). On no previous occasion within the past 45 years had 3 inches or upwards been measured.

Included in the 193 rainy days in 1909 are 20 on which snow or sleet fell, and 30 on which there was hail. In January hail was observed on 3 days, in February on 3 days, in March on 9 days, in April on 2 days, in May on 1 day, in July on 1 day, in August on 1 day, in October on 3 days, in November on 3 days, and in December on 4 days. Snow or sleet fell on 2 days in January, 3 days in February, 7 days in March, 1 day in April, 2 days in November, and 5 days in December. A thunderstorm occurred once in July and twice in August. Thunder was heard without visible lightning once in March. Lightning was seen once in March and May, four times in October, and twice in November.

The rainfall in the first six months of 1909 was 12·061 inches on 84 days. In the second six months it was 14·878 inches on 109 days.

The rainfall was distributed quarterly as follows:—4·550 inches fell on 41 days in the first quarter, 7·511 inches on 43 days in the second, 6·432 inches on 50 days in the third, 8·446 inches on 59 days in the fourth quarter.

More or less fog prevailed on 33 occasions—5 in January, 3 in February, 5 in March, 3 in April, 1 in August, 6 in September, 1 in October, 3 in November, and 7 in December. High winds amounted to gales (force 8 or upwards, according to the Beaufort scale) on 12 occasions—3 in January, 1 in February, 1 in March, 1 in April, 3 in October, and 3 in December.

Solar halos were seen on 24 occasions, a lunar halo on 16 nights, a lunar corona on 8 nights. Aurora borealis was seen once in March, May, and November, and twice in October.

Mr. Robert O'Brien Furlong, C.B., sends the following notes:—

The rainfall of 1909 at Cloneevin, Killiney, Co. Dublin, was 25·36 inches on 174 days. August was the driest month, with ·84 inch on 11 days; December the wettest, with 4·37 inches on 20 days. February had fewest "rain" days—namely, 8; March had the greatest number—namely, 22.

The average rainfall of 24 years (1885-1908) at this station was 27·500 inches on 185·9 days. The driest year was 1887, with 17·64 inches on 148 days; the wettest was 1900, with 35·35 inches on 205 days.

The greatest number of wet days in any year of the series was 219 in 1903; the smallest number of wet days in any year of the series was 148 in 1887.

The rainfall for the last 6 years was as follows:—1904, 22·14 inches on 182 days; 1905, 27·68 inches on 180 days; 1906, 22·34 inches on 201 days; 1907, 25·94 inches on 203 days; 1908, 25·66 inches on 196 days; 1909, 25·36 inches on 174 days.

Abstract of Meteorological Observations taken at Dublin (40, *Fitzwilliam-square, West*) *during the Year* 1909.

[*] See "Notes on the Statistical Tables," page 177. The Sunshine values are obtained from the Mountjoy Observatory in the Phœnix Park and the Earth Temperatures from Trinity College.

NOTE.—The mean pressures shown in the above Table have been given corrected for instrumental error and reduced to 32° Fahrenheit, but not reduced to mean sea level. If it be desired for any purpose to reduce them to the normal, the approximate correction for the purpose (varying within slight limits with the pressure and the temperature) is: + ·058.

NOTE.—The temperatures given above were deduced from the maximal and minimal readings of the thermometer. For the year 1889, Kæmtz's Formula was used, viz. :—Mean Temperature = Min. + (Max.—Min.) ·41 ; for subsequent years the Formula used was the following :—Mean Temperature = Min. + (Max.—Min.) C, the co-efficient C varying from month to month.

TABLE OF METEOROLOGICAL DATA FOR IRELAND.

Prepared in the Meteorological Office under the direction of W. N. Shaw, Esq., LL.D., Sc.D., F.R.S.; and published in the Quarterly Reports of the Registrar-General for Ireland.

In compiling the following Table (pp. 178-185), the stations have been grouped into two Districts, namely, 1. Ireland, North; 2. Ireland, South. Each District is represented by six stations. The stations selected, with the names of the Observers, are as follows:—

LIST OF STATIONS AND OBSERVERS.

Station.	Observer.
IRELAND, NORTH :—	
Malin Head, ...	Meteorological Office.
Blacksod Point, ...	Do.
Markree Castle, ...	J. R. Armstrong, for Bryan Cooper, Esq., M.P.
Donaghadee, ...	Meteorological Office.
Armagh, The Observatory, ..	J. L. E. Dreyer, Ph.D.
Belfast, Queen's College, ..	John Wylie, B.A.
IRELAND, SOUTH :—	
Dublin (City), ...	Sir John W. Moore, M.D.
Waterford, ...	J. N. White, Esq.
Birr Castle, ...	O. Boeddicker, PH.D., for the Earl of Rosse
Killarney, ...	E. W. Griffin, M.D.
Valencia, ...	Meteorological Office.
Roche's Point, ...	Do.

NOTES ON THE STATISTICAL TABLES.

Hours of Observation.—The hours of observation are indicated by the type in which the names of the stations are printed. CAPITALS, normal climatological stations, 9 a.m. and 9 p.m.; *ITALIC CAPITALS*, telegraphic reporting normal climatological stations, 7 a.m., 1 p.m., 9 p.m.; Roman, telegraphic reporting stations, 7 a.m., 1 p.m., 6 p.m.; *Italics*, auxiliary climatological stations, 9 a.m. only. At Valencia an additional observation is taken at 3 p.m. The afternoon observations are used in preparing the wind summaries and in computing the number of days of "overcast" or "clear sky." At telegraphic reporting stations (black capitals or Roman type) the results given under "hygrometer" and "cloud" are based on the morning observations only.

Barometer.—The correction for latitude has not been applied. The values are for station level. They are the means of readings at 9 a.m. and 9 p.m., or 7 a.m. 1 p.m., 9 p.m., or 7 a.m., and 6 p.m., as the case may be.

Rainfall.—The amounts are for the 24 hours commencing at the time of morning observation.

Weather Phenomena.—The number of days of Rain, Snow, Hail, Thunderstorm, Fog and Gale, are counted irrespective of the hours at which the phenomena occur. Except in the case of rainfall (see above) the day is the civil day. A day is reckoned as a day of "clear sky," if the average of the estimates of the "amount of cloud" at the hours of observation is less than 2, and as an "overcast" day if the average is greater than 8.

Wind Summaries.—The results given under wind direction, and the number of observations of calms and of fresh or strong wind, are based on the observations at fixed hours. At Valencia and Armagh the wind observations are based on the records of a standard Robinson anemometer (factor 2·2). Velocities of between 13 and 38 miles in the hour have been entered as "fresh or strong winds," velocities of 39 miles in the hour, or above, as gales.

Averages.—The averages used for stations are :—Temperature and Rainfall for the 35 years 1871-1905. Bright Sunshine for the 25 years 1881-1905.

District Values.—The district values of temperature, rainfall, and sunshine are computed from the data for the stations included in the Weekly Weather Report of the Meteorological Office. Only a selection of these stations is included in this Report. The average values with which the current district values are compared are for the 25 years, 1881-1905. The district values for "amount of cloud" and for the extremes of temperature and the largest rainfall in a day, are taken from the Monthly Weather Report of the Meteorological Office.

---

* Thus, the number of Marriages in the Abbeyleix Superintendent Registrar's District may at once be ascertained by referring in the "*Abstract of Marriages*" to the Superintendent Registrar's District, numbered 43 (*see* page 6); and in like manner the number of Births and Deaths, of Deaths at different ages, &c., will be found by referring to the same Superintendent Registrar's District Number in the appropriate Tables.

INDEX TO REGISTRARS' DISTRICTS.

[The Number or Numbers against each Registrar's District in the Third Column refers to the page in which the Total Births, Illegitimate Births, Deaths, &c., in the District during the year are given.]

No. 13,134.

DUBLIN CASTLE,
9th July, 1910.

SIR,

I have to acknowledge the receipt of your letter of the 7th instant, forwarding, for submission to His Excellency the Lord Lieutenant, your Annual Report on Marriages, Births and Deaths for the year 1909.

I am,
Sir,
Your obedient Servant,
J. B. DOUGHERTY.

The Registrar-General,
Charlemont House,
Dublin.

DUBLIN: Printed for His Majesty's Stationery Office
By ALEX. THOM & Co. (Limited), 87, 88, & 89, Abbey-street.
